DSOD – Data Definitions – Page i

Dam Number

Unique identification number used for inventorying dams in California based on the jurisdictional status of a dam. This number is assigned and used by the Division of Safety of Dams (DSOD).

National Inventory of Dams Identification Number (National ID No.)

Unique identification number used for inventorying dams in the U.S. Army Corp of Engineers' National Inventory of Dams (NID) database. DSOD is responsible for assigning this number for dams in California.

Dam Name

The dam name as given by the owner, which may not be unique and may differ from the name of the lake.

Owner Name

The entity or person with legal responsibility for the dam.

Owner Type

Owners are organized into the following categories:

- Associations (Home Owners Associations, etc.)
- City, city agency, or city district
- County, county agency, or county district
- Individual owner/Private citizen (Owner Name not provided)
- Park, sanitation, utility, or water district
- Private company, corporation, LLC, or partnership
- Private trusts and estates
- State Agency
- Water agency or authority

Dam Height

Vertical distance from the downstream toe of the dam to the dam crest (measured in feet).

Crest Length

Distance measured along the dam crest from one abutment to the other (measured in feet).

Reservoir Capacity

Maximum amount of water that the dam can impound (measured in acre-feet).

Dam Type

A four letter code describing and categorizing the principal material, style, or construction method of the dam:

- | | |
|--------------------------------|---------------------------------|
| • CORA Constant Radius Arch | • MULA Multiple Arch |
| • CRIB Crib Wall | • RECT Reinforced Concrete Tank |
| • ERRK Earth and Rock | • ROCK Rock Fill |
| • EARTH Earthen Embankment | • SLBT Slab and Buttress |
| • FLBT Flashboard and Buttress | • VARA Variable Radius Arch |
| • GRAV Gravity | • INFL Inflatable |
| • HYDF Hydraulic Fill | • RCC Roller Compacted Concrete |

Certified Status

The certified status of a dam is one of three statuses:

| Status | Description |
|----------------|---|
| Certified | Jurisdictional sized dams that may safely impound water to the elevation specified on the Certificate of Approval. |
| Certified/Inop | Jurisdictional sized dams without water impounding capabilities under reasonable foreseeable conditions, taking into account the size of the drainage area. |
| Not Certified | Jurisdictional sized dams that operate without a Certificate of Approval. Generally, these dams are in the process of becoming certified, altered to less than jurisdictional size, or being removed. |

DSOD – Data Definitions – Page ii

Downstream Hazard

The downstream hazard is based solely on potential downstream impacts to life and property should the dam fail when operating with a full reservoir. This hazard is not related to the condition of the dam or its appurtenant structures. The definitions for downstream hazard are borrowed from the Federal Guidelines for Inundation Mapping of Flood Risks Associated with Dam Incidents and Failures (FEMA P-946, July 2013). FEMA categorizes the downstream hazard potential into three categories in increasing severity: Low, Significant, and High. DSOD adds a fourth category of “Extremely High” to identify dams that may impact highly populated areas or critical infrastructure, or have short evacuation warning times.

| Downstream Hazard Classification | Loss of Human Life | Economic, Environmental, and Lifeline Losses |
|----------------------------------|---------------------------------|---|
| Low | None expected | Low and generally limited to owner’s property |
| Significant | None expected | Yes |
| High | Probable (one or more expected) | Yes, but not necessary for this classification |
| <i>Extremely High</i> | Considerable | Yes, major impacts to critical infrastructure or property |

Condition Assessment

California DSOD uses NID’s condition rating definitions, with additional criteria, as a guideline in assigning condition assessments.

| Rating | National Inventory of Dams Definitions | California DSOD Additional Criteria |
|----------------|---|--|
| Satisfactory | No existing or potential dam safety deficiencies are recognized. Acceptable performance is expected under all loading conditions (static, hydrologic, seismic) in accordance with the applicable regulatory criteria or tolerable risk guidelines | None |
| Fair | No existing dam safety deficiencies are recognized for normal loading conditions. Rare or extreme hydrologic and/or seismic events may result in a dam safety deficiency. Risk may be in the range to take further action | <ul style="list-style-type: none"> • Dam has a long-standing deficiency that is not being addressed in a timely manner • Dam is not certified and its safety is under evaluation • Dam is restricted and operation of the reservoir at the lower level does not mitigate the deficiency |
| Poor | A dam safety deficiency is recognized for loading conditions that may realistically occur. Remedial action is necessary. A poor rating may also be used when uncertainties exist as to critical analysis parameters that identify a potential dam safety deficiency. Further investigations and studies are necessary | Dam has multiple deficiencies or a significant deficiency that requires extensive remedial work |
| Unsatisfactory | A dam safety deficiency is recognized that requires immediate or emergency remedial action for problem resolution | None |
| Not Rated | The dam has not been inspected, is not under State jurisdiction, or has been inspected but, for whatever reason, has not been rated | None |

Reservoir Restrictions

DSOD may direct or order an owner to operate the reservoir to a specified water surface elevation level that is lower than the maximum storage level. In addition, owners may self-impose a restriction as a result of an owner-initiated study that identifies a dam safety issue. Reservoir restrictions are typically imposed for deficiencies of the dam, spillway, low-level outlet, or other appurtenances with respect to dam safety.
