JUNE 1968

FOREWORD

Division 3 of the California Water Code, comprising legislation enacted in 1929, and most recently amended in 1965, places nonfederal dams and reservoirs under the jurisdiction of the California Department of Water Resources for safety of design, construction, and operation; and surveillance for dangerous deterioration. These provisions of the Code are administered by the Department's Division of Safety of Dams. Dams 25 feet or more in height, impounding more than 15 acre-feet of water, and those more than 6 feet high, impounding 50 acre-feet or more are in jurisdiction.

Prior to August 14, 1929, State supervision over dams was exercised by either the State Engineer or the State Railroad Commission, but this supervision was limited in scope and extended to less than half of the dams in the state. Several federal offices exercised supervision to various degrees over debris dams and dams owned by the United States or occupying government rights-of-way. However, there still remained a large number of dams which had no form of supervision, either state or federal.

In 1928 the sudden and catastrophic failure of a large dam in southern California resulted in a major disaster. As a result of this failure and because of the potential hazard from the many water storage projects in California, the Legislature of 1929 enacted law providing supervision of dams in the state, Chapter 766, Statutes of 1929. The statute provided for (a) examination and approval or repair of dams completed prior to the effective date of the statute, August 14, 1929; (b) approval of plans and specifications, and supervision of construction of new dams, and of the enlargement, alteration, repair, or removal of existing dams; (c) overseeing maintenance and operation of all dams.

Under the statute, as amended, and in 1943 incorporated in the Water Code, a dam was defined as an artificial barrier across a stream channel, water course, or natural drainage area. In 1965, Division 3 of the Water Code was further amended and both new and existing offstream storage facilities and entire reservoir basins were placed within State jurisdiction for the first time. This amendment provides for both the approval of plans and specifications and supervision of construction of all new offstream facilities and the examination and approval or repair of those offstream dams and reservoirs completed prior to the effective date of the amendment, September 17, 1965.

Statutes and regulations pertaining to supervision of dams and reservoirs are available on request to the Department of Water Resources.

Before commencing construction of a new dam and reservoir, or the repair, alteration, enlargement, or removal of an existing facility, an owner must apply for and obtain written approval of the plans and specifications for the work. The plans and specifications must be prepared by a civil engineer registered under California law and independently ana-

lyzed and reviewed by the Division to assure the design will result in a safe structure. Proposed sites are investigated to determine their competency and the suitability of available construction materials. During construction, inspections are made for compliance with approved plans and specifications and to identify conditions disclosed during site development that may require changes in design. Foundations for dams and appurtenant structures generally may not be covered until examined and approved by the Division's engineers.

The Division has long employed a policy of evaluating the safety of each project individually on the basis of sound engineering and construction principles and has purposely avoided technical codes of standard requirements for design, construction, or surveillance. Such codes cannot be applied uniformly to the widely varying conditions encountered at different dams, reservoirs, and sites. Any attempt to do so might impede the science of dam design and construction. Consequently, a large element of individual and collective engineering judgment enters into the work of the Division of Safety of Dams.

Operating dams are examined periodically to detect unusual or adverse performance, which if not remedied, could lead to hazardous conditions. The use of dams and reservoirs for the safe impoundment of water is controlled by a system of conditional and revocable certificates.

This Bulletin will be published about every two years. Its purpose is to provide a useful compendium of dams and reservoirs under State supervision. This printing includes data for all dams and reservoirs under State supervision as of April 1, 1968. On this date there were a total of 1059 dams within jurisdiction with an estimated first cost of \$1,038,172,000 and a combined storage capacity of 20,022,000 acre-feet. In addition to the dams listed in this bulletin there are applications on file for the approval of plans and specifications for the construction of 81 proposed dams. These dams are not listed as construction has been postponed indefinitely by their owners for various reasons.

For the most part, data compiled in this bulletin have been supplied by owners in the applications and plans submitted in accordance with the Water Code. Information found in subsequent letters, publications, and tabulations of the owners has been used when applicable. In some instances the data have been supplied by field survey. Any corrections or additions that can be furnished by the user of this bulletin are appreciated and should be sent to the Division of Safety of Dams, Department of Water Resources, Box 388, Sacramento, California 95802.

A list of dams in California owned or operated by agencies of the United States is included as an appendix. Appreciation is expressed to these agencies for their cooperation in supplying the data for these dams.

EXPLANATION OF TABULATED DATA

The data tabulated for each dam and reservoir have been determined accordance with the following definitions:

Name of Dam – the name of the dam as assigned by the owner on the original application, or as subsequently changed upon the owner's written request.

Dam Number – assigned by the Department for identification and filing purposes.

County – where dam is located in more than one county, it is listed under the county of alphabetical precedence.

Stream – as submitted on the application or revised to conform with later editions of the United States Geological Survey topographic maps.

Type – Applies to the main dam only. Each dam is classified into one of twelve types using the following abbreviations:

CORA – Constant Radius Arch	HYDF – Hydraulic Fill
CRIB – Crib	MULA – Multiple Arch
ERRK – Earth & Rock	RECT – Reinforced Conc. Tank
ERTH – Earth	ROCK – Rock Fill
FLBT – Flashboard & Buttress	SLBT – Slab & Buttress
GRAV – Gravity	VARA – Variable Radius Arch

Storage Capacity – total capacity in acre-feet at maximum operating level and above streambed. Dead storage is included.

Drainage Area – given in units of square miles. For onstream facilities, drainage areas less than 0.1 square mile are listed as 0.1 square mile.

Reservoir Area – reservoir surface area at the spillway crest elevation or at maximum operating level if headwater controls are used.

Elevation of Crest – U.S.G.S. datum to nearest foot, when available. Otherwise approximate U.S.G.S. datum.

Crest Length – length of main dam crest in feet; does not include auxiliary dams.

Height – vertical distance in feet from crest of dam (excluding parapet, if any) to original streambed at downstream toe.

Permanent Spillway – vertical distance in feet from dam crest to crest of permanent spillway.

Maximum Operating Level – vertical distance in feet from dam crest to reservoir water surface at highest controlled stage.

Dam Volume – total volume in cubic yards of the principal material of the dam including auxiliary dams.

Year Completed – date the original construction was completed.

X – Year unknown
UC – Under construction
NS – Not started
