FOREWORD

A history of irrigation districts in California with complete reports on each of the individual organizations was published as Bulletin No. 21 by the Division of Engineering and Irrigation in 1929. To supplement and bring up to date the statistical information contained in that bulletin, the Division of Water Resources has since compiled a series of annual reports designated Bulletins No. 21-A to 21-I inclusive. This report, Bulletin No. 21-J, is the eleventh publication of the series and presents information collected for the year 1938.

The material has been compiled from reports submitted by the districts to the California Districts Securities Commission and from records on file in the office of the State Engineer. The figures have been carefully checked and are believed to be substantially correct although there may be minor errors or omissions in certain cases. It will be appreciated if any discrepancies noted are brought to our attention in order that corrections may be made in subsequent issues.

The bulletins are issued for the purpose of preserving in convenient form the annual records of these organizations, and to supply general information to the public regarding their operations. An expression of appreciation is extended by this office to irrigation district officials and others who assisted in gathering the information for publication.

ANNUAL REVIEW

Reports were received from eighty-five active irrigation districts in 1938. One new district was organized and one inactive district was dissolved during the year.

A review of district financial affairs indicates that continued progress was made during this period in refinancing those that had been in default and in restoring others to a sounder operating basis. The Reconstruction Finance Corporation held as security for loans advanced to thirty-two districts, \$37,535,369 in old bonds and \$2,422,768 in new refunding issues.

A total of 20,409 acres of district lands was reported sold back to private ownership and restored to the assessment rolls during the year. The average percentage of delinquencies in payment of assessments continued to decrease as it has for the past four years. For the districts as a whole the average delinquency for 1938 was 9.8 per cent, a decrease of 1.2 per cent from the preceding year as shown by the amount of tax certificates sold.

The total revenue collected by districts from all sources in 1938 was \$14,531,695 while total expenditures amounted to \$13,553,398 during the same period of operation.

The total area cropped in all districts reporting in 1938 was 1,911,563 acres of which 174,168 acres were dry farmed and 1,737,395 acres were irrigated.

The Growing Season of 1938

For most producing areas of the State natural conditions affecting growth and maturity of crops were relatively favorable. The late winter and spring were persistently cool, but there was no severely cold weather during this period. The summer and early fall were also without marked temperature extremes until the early part of November.

Total precipitation as recorded by the U. S. Weather Bureau was 126 per cent, and total snowfall 142 per cent of the 42 year average. Excessive rainfall occurred in February and March, both months having more than double the usual amount. Snowfall was heaviest in February when the average at mountain stations was over four times the normal.

Streams were high during the first half of the year due to excessive rainfall and later to melting of the accumulated snow pack. Severe floods occurred in nearly all parts of the state during this period and considerable damage to crops was caused by seepage and overflow waters. In June a large portion of Tulare Lake Basin was flooded from the Kings River with consequent loss of grain crops planted in the lake bed.

Moderate temperature and abundant moisture conditions were favorable however for most crops throughout the State. Ample water supplies were available for irrigation. Crop yields reported were generally fair to good despite flood losses and growth retardation due to the late spring.

Farm Operations

A review of statistics gathered by the California Crop Reporting Service for 1938 indicates a decrease in the volume and value of field crops produced during the season as compared with corresponding totals of 1937. This decrease ended five successive years of crop value gains that began in 1933. A large part of the difference between the total field crop values of 1938 and those of the previous year was due to reduced crop values of cotton, wheat and hay.

The total acreage of field crops harvested was about 5 per cent below the comparatively large area harvested the year before. The principal decreases in acreage were in cotton, wheat and beans.

Crops of grain sorghums and oats were larger. The potato crop was the largest ever produced in the State. Sugar beets also established a new high record, even though excess water forced abandonment of a considerable planted acreage.

Fruit and nut crops registered a slight decrease in production as compared with 1937. Average prices received for these commodities were also somewhat disappointing to many growers as they averaged about 78 per cent of the values obtained the previous year.

The position of livestock enterprises during 1938 was relatively more favorable than those producing crops. Weather and pasture conditions were exceptionally good. Abundant range feed throughout the season maintained stock in above-average condition and operating costs were low as little supplemental feeding was required.

DELANO-EARLIMART IRRIGATION DISTRICT

Location: Thirty miles south of Visalia and an equal distance north of Bakersfield, the greater part of the area lying in Tulare County and the remainder in Kern County.

Date of Organization: October 18, 1938.

Gross Area: 32,400 acres

Post Office: Delano

Railroad Transportation: Main line Southern Pacific Railroad.

The Delano-Earlimart District comprises approximately fifty sections of highly developed agricultural land lying in southern Tulare County and northern Kern County. It was organized during the year by a popular vote of 185 to 13 in order to contract for a supplemental water supply from the Central Valley Project.

Early History

Construction of the Southern Pacific Railroad through this region was a prominent factor in its early development. The site of Earlimart was approached by the line building from the north in the winter of 1872 and Delano was reached shortly thereafter. In 1873 Delano was the end of the line and the only town in Kern County that could boast a railroad connection. The town was then notable as a wool clip center and wheat shipping point.

In 1875 the Southern Pacific Company drilled an artesian well near Tipton a few miles north of the Delano-Earlimart area.

This well while only 310 feet deep was reported to have irrigated 40 acres. From then on until the nineties a number of wells were drilled, steam and gas engines being used for pumping where artesian flows were not obtained. The first raisin vineyard was planted near Delano in 1891. There is record of a small orange grove at Earlimart in 1903 that netted \$150 per acre. In 1911 the San Joaquin Light and Power Company began the extension of transmission lines to surrounding farms and development of irrigated areas by pumping rapidly followed.

Soils and Topography

The Delano-Earlimart District comprises a compact body of valley land about seven miles wide and nine miles in length extending along the east side of the Southern Pacific Railroad between the two towns from which it takes its name. The topography is comparatively uniform with a slope to the west of 15 or 20 feet to the mile. There are no natural drainage channels traversing the area. A shallow sandy depression forming the channel of White River extends two or three miles into the district from its eastern boundary but surface flows from the watershed rarely reach that far.

The soils of the district area are described in the Pixley and Wasco soil surveys made in 1935 and 1936 by the Department of Soil Technology of the University of California in cooperation with the Bureau of Chemistry and Soils, U. S. Department of Agriculture. Classified according to agricultural use 90 per cent of the district area

is given a Class I rating. No alkali or hardpan are present in this classification. About 9 per cent of the area carries a Class II rating as these lands are underlaid by hardpan or tight subsoils but are nevertheless suitable for a fairly wide range of crops. Only a minor area of some 400 acres within the original district boundaries are considered marginal in character. The Class I and Class II groups are for the most part alluvial soils of recent origin, are fertile, easily tilled and have a wide range of adaptability for irrigated crops.

Present Development

There are no incorporated towns or urban communities within the district limits as Earlimart and Delano lie just outside the westerly boundary on the main line of the Southern Pacific Railroad. This line and the Porterville Branch which runs to the east of the district provide ample shipping facilities at convenient loading stations. Highway No. 99 which parallels the main line of the Southern Pacific Railroad also affords means of shipping produce by truck to consuming centers.

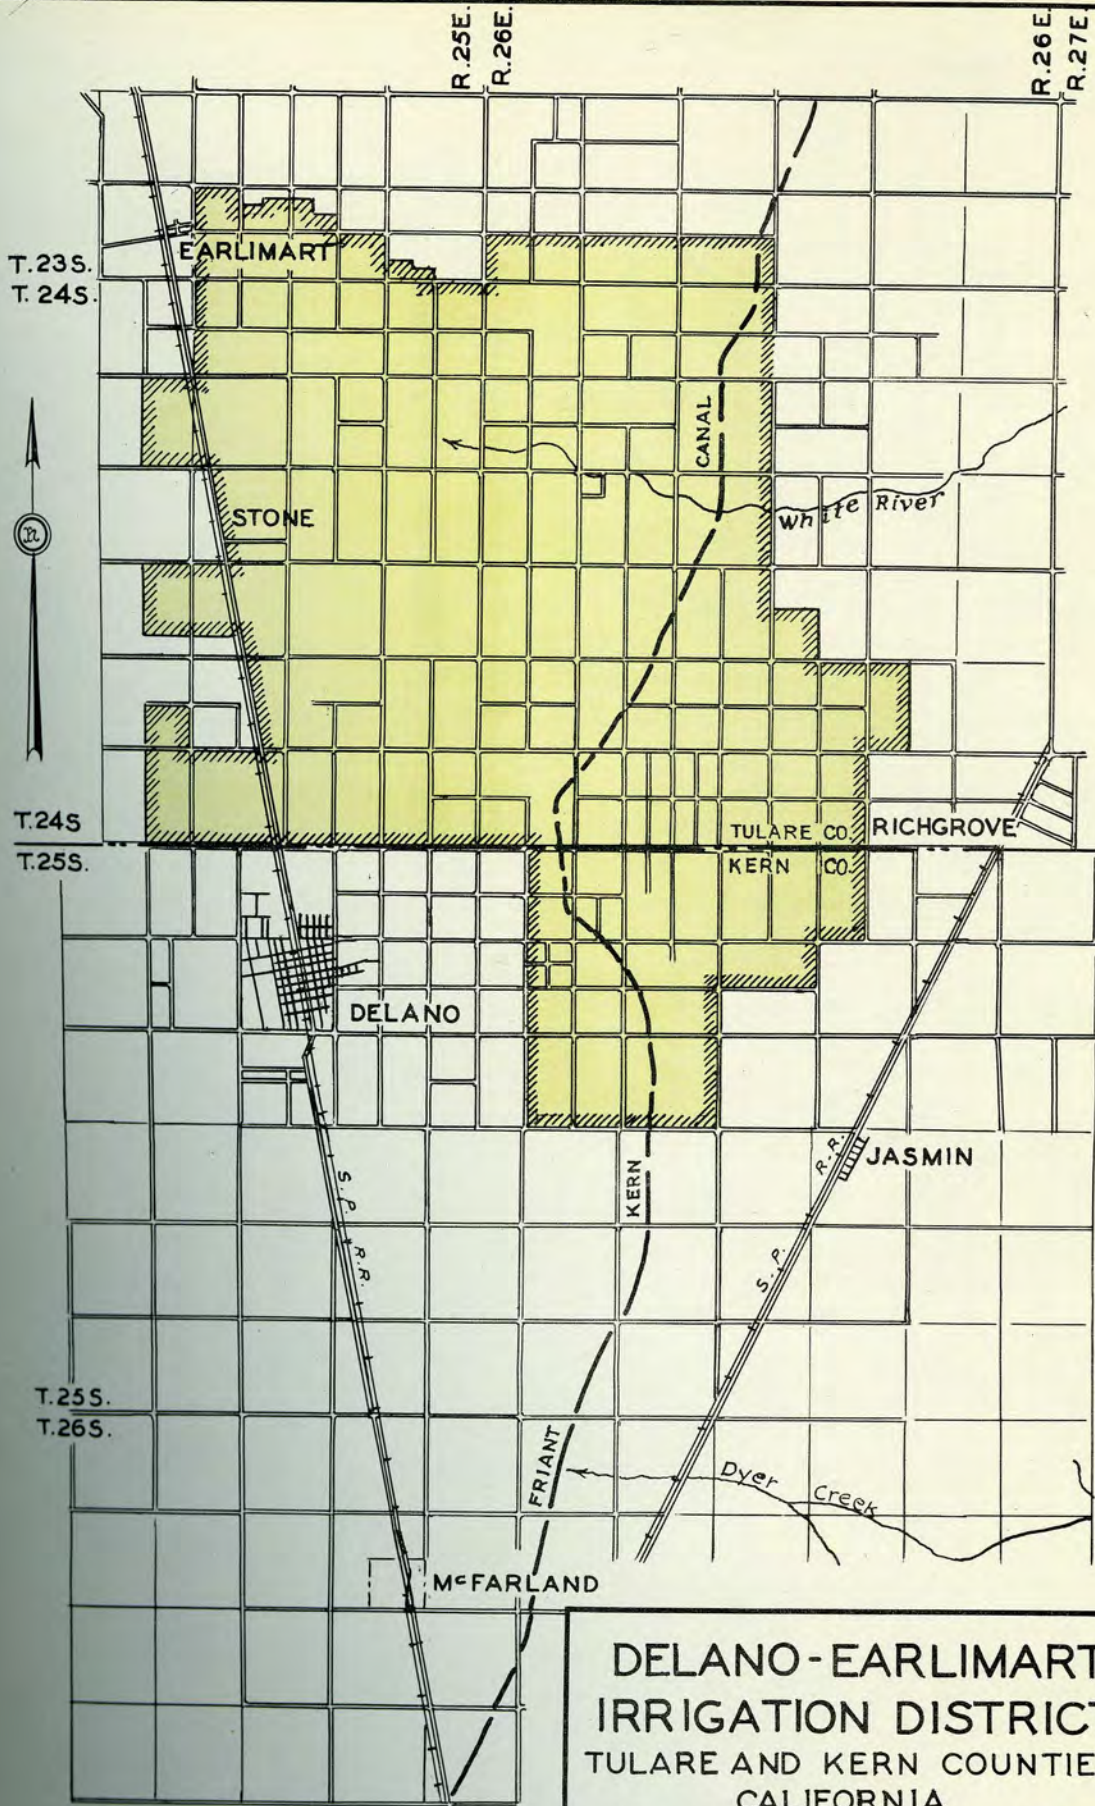

A crop survey of the district made in 1936 and rechecked in 1938 indicates that about 69 per cent of the area is under irrigation. All of the water supply is pumped from wells. Dry grain farming occupies 17 per cent and uncropped lands make up the remaining 14 per cent. The principal plantings are grapes, with cotton, vegetables, melons, alfalfa, deciduous fruits and olives ranking in the order named. The major portion of the unirrigated acreage is not developed due to the excessive

cost of producing a water supply from ground water which affords the only present available source.

Water Supply

The history of the water supply of this area is similar to that of other Upper San Joaquin Valley districts. A steady increase in the area devoted to irrigated crops has caused excessive draft on the underground water supply. Since recharge of the groundwater has been less than draft, a continuous drop in the water level has taken place. Records kept during the period 1921 to 1936 show that along the western boundary of the district, where pumping has been a minimum, the average drop in water levels for the fifteen year period has been about 40 feet while over the major portion of the area it has averaged 75 feet. Pumping lifts now range from 150 feet to 280 feet with a present average under the areas of greatest development of 250 feet.

The only possibility of securing additional water within economic limits is through importation of an outside supply. The district was organized to contract for such a supply from the Friant-Kern Canal of the Central Valley Project. This canal will pass through the eastern portion of the district affording means of serving two-thirds of the area with a gravity supply while the remaining third can be reached by reasonable pumping lifts from the canal.

**DELANO-EARLIMART
IRRIGATION DISTRICT
TULARE AND KERN COUNTIES
CALIFORNIA**

ORGANIZED OCTOBER 18, 1938
SCALE OF MILES

FALLBROOK IRRIGATION DISTRICT
DISSOLVED

The Fallbrook Irrigation District in San Diego County was formally dissolved by decree of the Superior Court on November 26, 1938. The district was organized in 1925 and endeavored without success for a number of years to obtain a water supply from Santa Margarita River. Efforts were then directed toward the San Luis Rey River as a possible alternate source.

The plans contemplated pumping from wells or water-bearing lands in the riverbed and utilizing underground storage basins to avoid costly construction of a surface reservoir. On a showing that the available water supply from San Luis Rey River would be entirely inadequate for the entire project, the district voluntarily excluded about half of the lands within its boundaries leaving some 5000 acres to be provided for under the amended plan.

An application for a grant and loan from the Federal Government to construct the necessary works was filed with the Public Works Administration in 1937, but was rejected as being economically unsound. Steps were then taken to bring about a reorganization in order to sponsor a project on a smaller scale. The irrigation district was dissolved and all of its assets including water permits on San Luis Rey River were turned over to the Fallbrook Public Utility District which supplied domestic water to the area from a small pumping plant on Santa Margarita River.

IRRIGATION DISTRICTS ASSOCIATION

The Irrigation Districts Association of California is a mutual association, formed about 1910, for the purpose of furthering the interests of various types of districts engaged in the distribution of water for irrigation. It has a membership of over one hundred such districts, organized under various existing laws, including irrigation districts, county water districts, water districts and reclamation districts, located in thirty-five separate counties of the state. The objectives of the association are to strengthen the districts legally, financially and economically. Two meetings are usually held each year at which delegates assemble for discussion of matters affecting their organizations.

San Jose Meeting

The first meeting in 1938, held at San Jose on March 17th and 18th, was attended by about 200 representatives of member districts. Topics under consideration included important litigation then pending in four cases affecting the financial rights, and relations of irrigation districts in general. The Association filed briefs as amicus curiae in each of these cases as it was deemed advisable that all of the districts be represented through their organization.

A committee report by attorneys was presented containing recommendations regarding the handling of lands deeded to irrigation

districts for delinquent assessments. The restoration of these lands to private ownership had brought up many perplexing problems and a wide variety of methods were employed by different districts in dealing with them. Recommendations of the committee were helpful in establishing a more uniform procedure.

Several important papers were read before the delegates relating to subjects of common interest encountered in district management and operation.

Riverside Meeting

The second session of the Association convened at Riverside October 12th, 13th and 14th, 1938. The meeting was largely devoted to consideration of new legislation affecting the districts that would be introduced at the forthcoming session of the State Legislature. Resolutions were passed endorsing the Revenue Bond Act and disapproving the Single Tax Proposition and the Life Retirement Pension Act. Proposed amendments to several sections of the Irrigation District Act were referred to an executive committee for consideration and drafting of necessary bills.

The Secretary of the Association reported that he had visited forty-eight member districts during the year and, taken as a whole, had found them in a much healthier condition financially and physically than they had been for several years. The assistance received by districts from agencies of the Federal Government in refinancing and in rehabilitating works was largely credited for the improvements shown.

DISTRICTS SECURITIES COMMISSION

The California Districts Securities Commission, created by act of the Legislature in 1931, is composed of five members: the Attorney General, the State Engineer, the Superintendent of Banks and two other members experienced in irrigation district affairs appointed by the Governor. The principal work of this Commission during the past few years has centered around the reorganization and refinancing problems presented by many of the districts that were unable to meet their outstanding obligations following the agricultural depression.

Special Provisions for Control of Districts

Section 11 of the Districts Securities Commission Act provides that any district more than 20 per cent in default in payment of debt may on application come under control of the Commission in the matter of levying assessments and making expenditures from funds. Thereafter such districts continue to operate under the Commission until the amount that can be raised by annual assessment, together with all other revenues, is sufficient to pay off any matured or un-refunded obligation. In fixing assessments, with approval of the Commission, these districts may levy only for such total amounts as appear reasonably possible for the lands to pay without exceeding a delinquency of 15 per cent. The operation of this section has been effective in checking the pyramiding of delinquencies that would otherwise have resulted in final confiscation of the lands.

Districts Operating Under Commission

Since the effective date of the passage of Section 11, twenty-seven districts have operated at various times under the Commission. Twelve of these have successfully cleared up their defaults through refunding operations and are no longer subject to its jurisdiction. Fifteen districts still under Commission Control that levied assessments for 1938-39 in accordance with the provisions of Section 11, are given in the following tabulation:

<u>District</u>	<u>Date of Control by Commission</u>
Banta Carbona	July 30, 1934
Byron Bethany	November 13, 1935
Corcoran	August 9, 1933
Grenada	August 24, 1935
James	September 7, 1937
Lindsay-Strathmore	July 7, 1933
Merced	August 22, 1933
Montague	September 12, 1933
Naglee-Burk	August 3, 1934
Oroville-Wyandotte	August 7, 1933
Provident	August 5, 1936
Thermalito	August 24, 1933
Tracy-Clover	August 10, 1933
Waterford	May 10, 1933
West Side	August 2, 1933

At the close of the year nine of the above districts were well advanced in their refunding operations. Loans received from the Reconstruction Finance Corporation had been disbursed to take up a large part of the old securities at a discount and suits were pending before the United States District Courts for confirmation of the adopted refunding plans in order that the terms might be made binding on all bond holders of record.

The other districts were at various stages in their negotiations for reorganization with prospects that a number of them, through aid of the Commission, would soon complete their plans. Their status at the close of the year is shown in the table below.

Refinancing Progress

District	Bonds Outstanding	Status as of January 1, 1939
Grenada	136,000	All but \$1,000 principal amount of bonds purchased through loan of \$20,750 negotiated by district. Warrants issued in payment of loan.
Montague	1,395,000	Applications for refunding loans from R.F.C. denied. No plan of refinancing acceptable to bondholders yet evolved.
Naglee-Burk	186,000	Loan authorized by R.F.C. sufficient to pay bonds at approximately 32¢ on the dollar. About 76% of bonds deposited in acceptance of plan.
Provident	957,000	Practically all land has been tax deeded to district. To date R.F.C. has refused refinancing loan. Negotiations still pending.
Waterford	631,925	Loan authorized by R.F.C. sufficient to pay 49¢ and district funds available to pay additional 10¢ making total offer of 59¢ on the dollar. Confirmation of plan pending before referee of U.S. District Court.
West Side	510,500	Loan authorized by R.F.C. sufficient to pay approximately 50¢ on the dollar. Large percentage of bonds deposited and disbursement of loan will soon be made.

STATISTICAL INFORMATION

The group of statistical tables following this chapter give in convenient form information regarding operations of California irrigation districts for the year 1938. A brief discussion of the main features brings out any changes that have taken place and compares the total figures with those for previous years.

Source of Supply, Storage and Distribution of Water

In Table I are shown the sources of water supply of the districts, capacities of reservoirs, water stored during the season of 1938, the amount of water diverted by gravity and by district pumps, and the distribution of water diverted. The number of district wells reported in operation is given together with the installed horsepower and average pumping lift.

There were twenty-three major storage reservoirs operated by irrigation districts and one by a water storage district with a combined total capacity of about 1,625,000 acre-feet. Water stored during the season amounted to 1,177,500 acre-feet or 72 per cent of the available reservoir capacity. The total amount of water diverted was reported as 8,851,500 acre-feet of which approximately 90 per cent was by gravity, 6 per cent by pumping from streams, and 4 per cent by pumping from district wells.

The districts operated 323 irrigation wells and 336 drainage wells, and for all pumping operations reported an installation of

38,490 horsepower. The supply of water furnished by the districts was in some cases supplemented by private pumping, but no records are available as to the amounts of water furnished by the 12,571 private wells listed in district areas.

Irrigation District Crop Summary

Table II gives the gross and irrigable area of 96 irrigation districts. It also shows the dry-farmed and irrigated acreage cropped in 1938, as well as the kind of crops produced. The estimated number of individual land holdings in each district is shown, and the amount of land that was held in district ownership by virtue of tax deeds on January 1, 1939.

The districts listed contain a total of 3,484,687 acres of which 2,898,420 acres are considered to be irrigable land. The total number of separate holdings in these districts was reported to be 100,849 of which it is estimated that approximately 61,000 are farm holdings with a population of 245,000.

The area held by districts under tax deed decreased during the year from 352,177 acres to 338,742 acres. The percentage of the total area of all districts held under tax deed on January 1, 1939, was 9.7 per cent a slight decrease over the preceding year when it was reported as 10 per cent. Many of the districts have been successful in disposing of these lands to new owners and getting them back on the tax rolls. In other cases the lands are leased out by the districts on a cash, or crop-share basis to meet a part of their bond service and operating costs.

The total cropped area in all districts reporting in 1938 was 1,911,563 acres, of which 174,168 acres were dry farmed and 1,737,395 acres were irrigated. There were also 297,210 irrigated acres reported double cropped making a total of 2,034,605 irrigated acres harvested during the season. Sixty per cent of the irrigable area was irrigated. This was a decrease of 106,930 acres in the area irrigated as compared to that reported in 1937.

Following is a summary of the kind and acreage of irrigated crops, including double crops, reported for 1938.

<u>Kind of Crop</u>	<u>Acres</u>	<u>Per cent of Whole</u>
Alfalfa and Ladino Clover	447,531	22.0
Cotton	48,453	2.4
Rice	45,479	2.2
Grain and grain hay	274,301	13.5
Field and truck	443,705	21.8
Grapes	157,054	7.7
Deciduous fruit, nuts, olives	117,649	5.8
Citrus and avocado	48,494	2.4
Irrigated pasture	54,558	2.7
Not Segregated	<u>397,381</u>	<u>19.5</u>
	2,034,605	100.0

Assessments, Tax Certificates, Receipts and Disbursements

Table III gives the principal sources and amounts of income for each of the active irrigation districts. The total assessments

payable in these districts for the calendar year 1938, computed by taking one-half of the sum of the levies made for 1937-38 and 1938-39, was \$4,841,808. This was a decrease of \$32,753 in the amount levied for the previous calendar year.

A comparison of the total assessments levied during the past eight years and the apparent average delinquencies in payment as shown by the amount of tax certificates sold each year is given in the following tabulation.

<u>Assessment Year</u>	<u>Total Assessments</u>	<u>Total Tax Certificates Sold</u>	<u>Average Per cent of Delinquency</u>
1930-31	\$10,286,582	2,387,518	23
1931-32	9,794,594	3,748,372	38
1932-33	6,802,006	3,681,896	54
1933-34	4,535,253	1,589,926	35
1934-35	4,638,001	1,443,583	31
1935-36	5,167,802	746,207	14
1936-37	4,851,696	551,815	11
1937-38	4,887,630	478,085	9.8

The total amount of tax certificates sold in 1938 was about 13 per cent less than the preceding year and shows a continuation of the trend of improvement that has been evident since the pyramiding of unpaid assessments was checked in 1934. The average delinquency for all districts as a group was only 9.8 per cent in 1938.

Collections from assessments, redemptions and penalties in 1938 amounted to \$5,071,096; water tolls and power sales were \$5,787,062;

receipts from rentals, crop shares and miscellaneous sources added \$3,210,147; while returns from sale of district owned land brought in \$463,390, making a grand total of \$14,531,695 collected during the year. Expenditures for all purposes during this same period amounted to \$13,553,389 as shown by the last column of the table.

Bonds and Warrants

Table V presents the status of irrigation district bonds and registered warrants outstanding as of January 1, 1939. Of the thirty odd districts listed as being in default in payment of bond principal and interest, twenty of these were in the process of re-financing their outstanding indebtedness through loans from the Reconstruction Finance Corporation. Several of the other defaulting districts were endeavoring to work out refunding plans, but had not completed their negotiations.

The tabulation shows the amount of bonds sold, refunded, paid and outstanding as well as the amounts of principal and interest of the old issues in default.

Where loans from the R.F.C. had been disbursed to purchase old bonds at a discount, the amounts of the outstanding loans are shown together with the bonds taken up and held by R.F.C. A comparison between the columns showing the bonds outstanding and the bonds held by R.F.C. indicates the extent to which the refunding plans had been completed at the beginning of the year 1939.

Refunding bonds to cover the R.F.C. loans have been ap-

proved by the Securities Commission and voted by the districts in most cases, but they will not be issued until practically all of the old securities have been taken up for cancellation. Until these transactions are completed, the old bonds must be carried as outstanding obligations of the districts and are shown accordingly in the tabulation. This does not represent the true financial condition in any particular case, for the old bonds are merely held by R.F.C. for repayment upon the same terms that would be the case if refunding bonds had been issued. The actual capital debt is that represented by the loan, on which interest is being paid at 4 per cent, plus the value of old bonds that have not been deposited under the plan.

As of January 1, 1939, seventy-three districts had a total of \$89,584,333 in outstanding bonds. The Reconstruction Finance Corporation held \$2,422,768 in new refunding issues, and \$37,535,369 in old bonds as security for loans that had been advanced to thirty-two of the districts.
