FOREWORD

The first publication of this series of reports was issued in 1929 as Bulletin No. 21, "Irrigation Districts in California", by the former Division of Engineering and Irrigation. The bulletin contained a short history of each of the organized districts and tables of statistical data on their operations for the year 1928. To supplement that information and keep the statistical data up to date the Division of Water Resources has since prepared and issued annual reports designated Bulletins No. 21-A to No. 21-K, inclusive, covering the ten year period to 1939. This report, Bulletin No. 21-L, is the thirteenth publication of the series and contains material collected for the year 1940.

The information presented has been compiled from reports submitted by individual districts to the California Districts Securities Commission and from records on file in the office of the State Engineer. Figures submitted have been checked and are believed to be substantially correct. If any errors or omissions are noted, this office will appreciate having the discrepancies called to its attention in order that corrections may be made in subsequent issues.

The bulletins provide a convenient reference for determining facts and figures pertaining to operations and outstanding obligations of any particular district. They also furnish general information to the public regarding the location and extent of irrigated areas organized as districts throughout the State.

ANNUAL REVIEW

District Reports

Eighty-four active districts sent in reports of their annual operations for the year 1940. There were no new districts formed during this period and none were dissolved.

A review of the statistical information submitted shows a season of successful farm operations and continued progress in the rehabilitation and refinancing work that has been under way for the past five years.

Seventy-three of the districts listed had a total of \$89,397,000 in outstanding bonds counting both old and new issues. The Reconstruction Finance Corporation held \$38,299,100 in old securities and \$3,492,200 in new refunding bonds as evidence of loans advanced to thirty-five districts for refinancing purposes.

A total of 27,643 acres of district tax deeded land was reported sold back to private ownership and restored to the assessment rolls during the year, in thirty-six of the districts reporting.

The average delinquency in payment of assessments levied for 1939-40 averaged only 10.4 per cent for all districts as a group, and was about one per cent less than a similar average for the preceding assessment year.

The total revenue collected by districts from all sources in 1940 amounted to \$13,884,800 while total expenditures during this period were \$12,761,300.

The total cropped area in all districts reporting was 1,844,981 acres of which 1,688,847 acres were irrigated and 153,134 acres were dry-farmed. There were also 314,810 irrigated acres re-

ported double cropped making a total of 2,003,657 acres harvested in districts during the year.

The Growing Season of 1940

Weather factors were largely favorable to the production of crops in the State in 1940. Seasonal rainfall was abundant and generally well distributed. Temperatures were moderate in most localities during the winter months necessitating little orchard heating. Summer hot spells were of short duration and the light Fall precipitation caused little interference with the harvesting and drying of fruits.

Unfavorable factors were early Spring floods in the Sacramento drainage basin and in the coastal valleys from the Santa Cruz Bay district northward. A severe late freeze occurred in the Sacramento and San Joaquin valleys near the middle of December which damaged unpicked navel oranges and celery in the Delta region.

Reports of the U. S. Weather Bureau show that total precipitation for the State in 1940 was 150 per cent of the 44 year average, and was with two exceptions the greatest of record during that period. The years 1906 and 1909 were somewhat wetter. The total snowfall was 79 per cent of the 44 year average. Snow cover was generally subnormal at low and intermediate levels, but well above normal at higher altitudes, insuring ample summer runoff for irrigation.

Farm Production

A review of statistics gathered by the California Cooperative Crop Reporting Service for 1940 features a highly successful season of farm operations in all branches of the industry. Abundant

rainfall, ample irrigation water, and moderate growing temperatures were important factors in determining the favorable results that were obtained.

Field Crops as a group were notable for their high production volume in 1940, but of no less significance was the increase in total income from the sale of these crops, as compared with returns for 1938 and 1939. The crop of Grain Sorghums was much larger than that produced in 1939 and above average. The State's Bean crop was the largest in history due to excellent yields on a large acreage. Cotton, limited as to acreage, produced a phenomenally high record yield per acre, and a crop considerably larger than in 1939. Sugar Beets, off to a slow start in the spring, made generally good yields and a record tonnage from the largest acreage ever harvested. The State's 1940 Potato crop exceeded the record production of 1939. The crop of Flaxseed was much the largest ever grown in the State as the acreage was greatly expanded and yields were high. Barley production failed to meet early season expectations, but was larger than the previous year and above average. The 1940 Wheat crop in California was smaller than that of 1939, and below average, due mainly to a lower average yield per acre, as the result of loss from rust.

In terms of aggregate tonnage of all major field crops, production in the State in 1940 established a record, exceeding by more than 9 per cent that of the previous record year. The acreage harvested was the largest since 1920. This was mainly responsible for the heavy total production although, as noted, yields per acre of several field crops were well above the average.

Vegetable acreages harvested in 1940 were 5 per cent below those of the previous year. Heavy rains and wet weather reduced

spring plantings. The average net return of most crops was better, however, and the total value received was 10 per cent greater than for the year 1939. Lettuce continued to be the most valuable vegetable crop in California, representing about 23 per cent of the total returns, while tomatoes, asparagus, celery and carrots ranked in the order named. Cantaloupes, which have been among the leading five crops for many years dropped to sixth place on the list in the 1940 records.

Fruit crops reached maturity somewhat early and were harvested rapidly during favorable weather. There were but small changes in total bearing acreages. About two-thirds of the crops produced brought the grower higher average prices per ton than in 1939. Most of the 1940 averages that fell below the 1939 averages were for commodities utilized in part as dried fruit, which reflected the loss of foreign markets.

Live stock conditions in the State during 1940 were especially favorable. There was available at all times an abundance of hay, grains and by-product feeds, while the pasture and range situation was much above average. Ample feed supplies at reasonable prices kept production costs relatively low. Prices received by producers for cattle, calves, sheep, lambs and wool were maintained at generally satisfactory levels; prices for milk and milk products averaged higher than in the previous year; while prices for hogs, chickens, eggs and turkeys remained comparatively low.

IRRIGATION DISTRICTS ASSOCIATION OF CALIFORNIA

This mutual association of districts has been in operation over a period of about thirty years. Its activities are devoted to advancing the welfare of various types of districts engaged in the distribution of water for irrigation. There are over one hundred organizations in its membership including irrigation districts, county water districts, water districts, and reclamation districts, located in thirty-five separate counties of the State. Two meetings are held annually at which representatives gather for discussion of various problems of common interest to their local units.

Merced Meeting

The first meeting in 1940 was held May 16th and 17th at Merced. The Secretary reported that a general survey of the districts found them as a whole in far better condition both as to financial structure and physical works than they had been for several years. This was especially true of the financial condition of those districts that had been refinanced through loans from the Reconstruction Finance Corporation.

A resolution was carried urging the passage of a bill then before Congress that would extend the life of Chapter IX of the National Bankruptcy Act to June 30, 1942. This would permit a number of districts whose composition plans were pending before the courts to complete their reorganizations and issue refunding bonds.

Several papers covering topics of interest to the members were read before the convention. Among the subjects were:

- (1) Drainage Wells versus Drainage Canals - Cost and Efficiency.

- (2) Water Master Administration on Kings River.
- (3) Water Right Adjudication Procedures in the Water Commission Act of California and Accomplishments Thereunder.

The State Engineer spoke briefly on recent severe flood damage suffered by several of the irrigation and reclamation districts and the timely assistance rendered these organizations by the State through allocation of emergency funds for immediate repairs.

San Diego Meeting

The second regular meeting of the Association convened at San Diego October 17th to 19th, 1940. In his report to the members the secretary mentioned the recent favorable decisions of the Federal Circuit Court of Appeals upholding the plans of composition of indebtedness of the Merced, Lindsay-Strathmore, Corcoran, James and Palo Verde irrigation districts. These decisions were regarded final and as setting a precedent for other pending cases, as the Supreme Court was not likely to consider a further appeal.

A report was made by the Committee on Flood Control, citing its close contact with work of the U. S. Army Engineers in the making of preliminary examinations and surveys on many streams in the State which periodically overflow their banks causing extensive loss and damage to cities and farming communities. Mention was made of the committee's cooperation with the State Chamber of Commerce in its formulation of a Statewide flood control policy, and with the National Reclamation Association in advancing the interests of flood control in California.

A report from the Committee on Water Code recommended the appointment of a group to work with the California Code Commission in

the interpretation of the California Irrigation District Act and in perfecting drafts of that part of the Code relating to district operations. A full time attorney was appointed to make detailed analyses of sections of the Water Code and submit a report thereon to the Association at a subsequent meeting.

The committee appointed to study the consolidation of forms on which annual reports of the districts were made to the Districts Securities Commission and to the Reconstruction Finance Corporation, reported that a simplified questionnaire had been prepared and approved which would serve the requirements of both agencies and eliminate duplication of effort in making reports.

Committees appointed to study suggested amendments to the Irrigation District Act submitted recommendations that action be taken by the Association to have the necessary bills introduced at the forthcoming session of the Legislature.

NEW LEGISLATION

There have been many changes in the California Irrigation District Act since passage of the early Wright Act of 1887. The act was rewritten and reenacted in 1897 and has been amended by almost every succeeding Legislature since that date. Many of these revisions have been mere matters of detail, but others have been of basic importance in defining the powers and duties of these organizations. Some of the principal amendments and supplemental acts have related to the method of organization, the issuance and refunding of bonds, the levying of assessments, the sale of water for power, and the generation, purchase or lease of electrical energy for distribution either inside or outside district boundaries.

A large number of bills affecting the Irrigation District Act were introduced at the Legislative Session of 1941. In keeping with the trend of the times one amendment permits irrigation districts to acquire and improve land for an airport or aviation school in cooperation with agencies of the Federal Government. Most of the bills that were finally passed were sponsored or approved by the Irrigation Districts Association, which carefully reviews all proposed legislation that has a bearing on district operations. A short digest of changes that were made in various sections of the Irrigation District Act is given in the following review of certain chapters that appear in the 1941 Statutes.

Changes and Amendments made to Sections of the
Irrigation District Act at Legislative Session of 1941

Organization of Irrigation Districts

Section 1 as amended restricts to petitions under the act, the presumption that land assessed to fictitious owners in addition to named owner, has only one other owner. (Stats. 1941, page 1779.)

Publication of Notices

Section 1.5 is a new section which declares that whenever notice is required to be published under the Irrigation District Act for a designated number of weeks, the notice need be published only one day each week and only for the same number of times as number of weeks stated. (Stats. 1941, page 1191.)

District Divisions and Election of Directors

Section 5 as amended makes mandatory instead of discretionary, the board of supervisors' compliance with petition's request for three instead of five divisions for a district. (Stats. 1941, page 1779.)

Publication of Financial Condition

Section 14a is amended to extend the time for rendering and publishing the annual financial statement of the district, from the January meeting to the March meeting of the board of directors. (Stats. 1941, page 1036.)

Acquisition of Land for Airports or Aviation Schools

Section 15.1 was added to permit irrigation districts to acquire or use land not more than 7 miles from nearest boundary of the district, and improve it for airport or aviation school purposes.

The District may not issue bonds for such purpose, but may incur indebtedness not to exceed revenues. An agency of the United States must agree to contribute for improvement of such land and board of directors must find that no other public agency is able or willing to cooperate in the improvement. (Stats. 1941, page 2090.)

Appointment of Board of Directors

Section 19c is amended to provide for the return of a district to an elective basis after a board of directors has been appointed by the board of supervisors pursuant to a petition by a majority of landowners in the district showing that not more than 5 landowners are residents and electors in the district. (Stats. 1941, page 1189.)

Selection of Officers

Section 19d is a new section added which permits appointment of directors by a board of supervisors upon certification by the Districts Securities Commission that 90 per cent of the land in a district is tax deeded, that no election of directors has occurred for 4 years, and that the Commission believes such appointment will best serve the public. It also provides procedure for return of such districts to election of its own officers when conditions permit. (Stats. 1941, page 2342.)

Notice of Elections

Section 21. Under the amended section, notice of an election must be published once a week for two successive weeks in a newspaper of general circulation within the district. If no such paper is published within the district, notices may be posted as

previously required in three public places in each election precinct and also in the office of the board. The time of giving notice must be not less than 30 nor more than 40 days before the election instead of 15 before as formerly specified. (Stats. 1941, page 1172.)

Voting and Counting of Votes

Section 23. Amendment provides that conduct of voting and canvass procedure shall follow substantially the Election Code for general elections. References to roster of voters is substituted for poll lists. Only one certificate of returns is necessary and the requirement for 6 months preservation of records is deleted. Any request for recount of ballots must be made by a voter and by affidavit. (Stats. 1941, page 1754.)

Informalities not to Invalidate

Section 23.5 is a new section added which provides that no informalities in the conduct of the election or any matters relating to it shall invalidate the election if otherwise fairly conducted. (Stats. 1941, page 1754.)

Abolition of Divisions

Section 28.25 is a new section added providing procedure for the board of supervisors to abolish divisions in districts having less than 2500 acres, less than 25 electors, and only 3 divisions. (Stats. 1921, page 2342.)

Restoration of Divisions

Section 28.35. This new section sets up the method to be followed for reestablishing divisions in the district, on petition

of a majority of electors to the board of supervisors of the county.
(Stats. 1941, page 2342.)

Assessment of Omitted Lands

Section 39e as amended makes such assessments, if levied, collectible in the same manner as other district assessments.
(Stats. 1941, page 1185.)

Segregation of Land on Assessment Roll

Section 41b. The amended section revises the procedure for separate valuation of land for the purpose of paying assessments. It permits applications to be filed with the collector from the due date of assessment until 5 days before the regular December meeting of the directors. The board of directors take final action on the application. (Stats. 1941, pages 1789.)

Costs on Delinquent Assessments

Section 43. The amended section fixes a definite time when the 50 cent advertising costs must be charged. The collector must collect these costs when the assessment becomes delinquent or if the assessment is payable in installments, then at the time the second installment becomes delinquent. (States. 1941, pages 1184.)

Certificates of Sale

Section 45. The amendment deletes the requirement that certificates of sale of property for delinquent assessments be filed by the county recorder in book form. It validates certificates not so filed and all deeds and acts based upon them. (Stats. 1941, page 2242.)

Property Sold for Delinquent Assessments

Section 46. The new section declares that when property sold to an irrigation district for delinquent assessments is referred to as "land" in the Irrigation District Act, "land" used in that sense means "property". (Stats. 1941, page 1188.)

Property Sold or Deeded for Delinquent Assessments

Section 48.2. This section makes provision for placing the burden of proof on the person attacking disposal of such property by a district. It deletes the exception from one-year limitation, for those cases where there is total lack of jurisdiction to make a sale or deed. (Stats. 1941, page 2410.)

Surrender of Irrigation District Obligations

Section 52.2. The new section provides for cancellation by the board of directors of any bonds or warrants delivered to them by the owner for that purpose. The securities cease to be an obligation as of the date of their presentation. (Stats. 1941, page 1182.)

Credits on Payment of Assessments

Section 52 $\frac{1}{2}$. The new section imposes a one year limitation on actions contesting the validity of payments or credits, on assessments paid with bonds of a district before the repeal of Sec. 52a in 1935. (Stats. 1941, page 2242.)

Compensation Officers

Section 57. The amended section authorizes the board of directors of a district containing more than 500,000 acres to fix

additional compensation for the president of the board. (Stats. 1941, page 2284.)

Retiring Outstanding Contracts

Section 61. The amendment empowers a district to issue warrants for money to retire or refinance outstanding contracts. It restricts the rate to the contract rate, or not to exceed 6 per cent in any event. (Stats. 1941, page 2580.)

Rotation of Use of Water by Water Commissioners

Section 62. The repeal of this section deletes provisions requiring water commissioners to apportion available supply in times of low water. (Stats. 1941, page 1191.)

Ditch Flowage During High Water

Section 63. This section requiring the board of directors of a district to keep the water flowing to full capacity of ditches in times of high water was repealed. (Stats. 1941, page 1191.)

Court Proceedings

Section 72.5. A new section is added declaring the provisions in Sections 70 and 71, regarding consolidation of court actions and procedure to be followed thereunder, apply only to Sections 68 and 69 relating to proceedings to determine validity of bonds or assessments. (Stats. 1941, page 1219.)

Amendments to Sections of the
Districts Securities Commission Act

Report of Commission on Proposed Bond Issues

Section 4. The requirement that the report of the Commission shall be made upon the probable success or failure of the project about to be undertaken is deleted, and other changes are made in the items which the report is required to cover. Procedure is provided for reporting the number, data of issue and denomination of bonds authorized, at the time of approval for certification. (Stats. 1941, page 2142.)

Report Filed with Controller - Duties of Controller

Section 5. The amendment adds the following underscored words to language of the old section: "the bonds of such district, as described and enumerated in said report filed with the State Controller, shall be entitled to be certified by the State Controller, as hereinafter provided for. If the Commission shall be notified by the board of any district whose project has been found in such report to be feasible that the district has issued bonds approved but not enumerated in the report, and the Commission shall find that said bonds are for any project or projects approved in such report, the Commission shall prepare and file with the State Controller a supplementary report giving numbers, date or dates of issue and denominations of said bonds, etc. (Stats. 1941, page 2142.)

Supervision of Expenditures from Certified Bond Proceeds

Section 6 is amended by striking out the following ambiguous clause relating to limitation of expenditures: "nor shall any

clause relating to limitation of expenditures: "nor shall any expense of any kind be incurred in excess of money actually provided by levy of assessment or otherwise except as otherwise provided by law." With this language omitted the section is clarified in regard to supervision of the expenditure of certified bond funds by the Commission. (Stats. 1941, page 2142.)

Modification of Refunding Plans

Section 12b is a new section which declares the Commission is empowered to approve the issuance of securities for other securities, claims, or property interests if the terms and conditions are found to be fair after a public hearing. It also states that the Commission has authority to approve changes or modifications in refunding plans of any district after a hearing on the fairness of such changes, at which all interested persons shall have the right to appear. The Commission is further authorized to fix the time and manner of giving notice and the place at which the hearing will be held.

Legislation previously enacted, authorizing districts to enter into arrangements with their creditors to amend or modify refunding plans, fully contemplated that any action by the Commission would be taken only after due notice and hearing in accordance with the usual and customary practice of the Commission, but the act under which it operated did not, in so many words, so state. The new section clarifies the procedure and makes possible the immediate carrying out of such modifications and changes as are found to be necessary and equitable. (Stats. 1941, page 2498.)

DISTRICTS SECURITIES COMMISSION

The California Districts Securities Commission, created by act of the Legislature in 1931, is composed of five members: the Attorney General, the State Engineer, the Superintendent of Banks and two other members experienced in irrigation district affairs appointed by the Governor.

Duties of the Commission in connection with the issuance, certification, sale and refunding of irrigation district bonds are defined by sections 30 to 33 of the Irrigation District Act and also by provisions of the Districts Securities Commission Act. Several other types of districts organized and existing under laws of the State whose primary functions are the irrigation, reclamation or drainage of lands may also request Commission approval of their bonds for certification as legal investments for public funds and other specified purposes.

Investigations and Reports

The Irrigation District Act provides that before the board of directors of an irrigation district may call an election for the issuance of bonds to raise funds for construction or acquisition of works, it must first submit plans and estimates of cost to the Districts Securities Commission for a report on the advisability of proceeding with the undertaking. After causing an investigation to be made, if the Commission deems it advisable that the plans be modified, or the amount of the proposed bond issue changed, or that certain conditions be prescribed to insure success of the project, or that in its opinion it would not be advisable to proceed with the

proposed bond issue, a report to the board of directors is made to that effect.

Approval of Bond Fund Expenditures

Whenever the bonds of a district have been certified as provided by the act, no liability may be incurred by the directors until a schedule of proposed expenditures from the proceeds of the issue has been filed with and approved by the Commission. No expenditure may be made for any purpose not specified in the schedule, nor for any approved purpose in excess of the amount allowed in such schedule, without obtaining prior consent of the Commission.

During the progress of any work to be paid for from the proceeds of a certified bond issue, the State Engineer on behalf of the Commission is required to make from time to time such inspections of the project as may be necessary in order to determine that the plans approved by the Commission are being carried out without material modification.

If the plans of a district provide that the works necessary for a completed project shall be constructed progressively over a period of years in accordance with a schedule adopted by resolution of the board of directors, the bonds so voted and certified, or any portion of them, may only be sold after prior written approval of the Commission.

Sale of bonds may be made by the directors of a district after passing a resolution of its intention to do so, and advertising in a newspaper of the county for sealed proposals. In case the bids are all rejected and no award is made, the board may either readvertise the bonds or sell them at private sale, but no private

sale of bonds is valid unless approved by the Districts Securities Commission.

Supervision of Defaulting Districts

Whenever the revenues that can be raised by a district are insufficient to meet bond principal or interest payments, and the district defaults to the extent of 50 per cent of the amount due, the district may on application come under the control and direction of the Securities Commission. Thereafter such district continues to operate under the Commission's guidance until the amount that can be raised by annual assessment, together with all other revenues, is sufficient to pay off any matured or unrefunded obligation. In fixing assessments, with approval of the Commission, the district may levy only for such total amounts as appear reasonably possible for the lands to pay without exceeding a delinquency of 15 per cent.

Section 11 of the Districts Securities Commission Act containing the above provisions was adopted as an emergency measure at the Legislative Session of 1933. It was designed to prevent, and did effectively check, the pyramiding of delinquent assessments that occurred during the agricultural depression. The life of Section 11 has been extended by each succeeding Legislature and now runs to November 1, 1941, at which time it is anticipated that most of the districts will have completed their reorganization plans.

Districts Operating under Commission

Since the effective date of the passage of Section 11, twenty-eight districts have at various times operated under the Commission. Thirteen of these districts have already successfully cleared up their Defaults and are no longer subject to its jurisdic-

tion. The remaining fifteen districts that levied assessments with Commission approval for the year 1940-41 are listed as follows:

<u>District</u>	<u>Date of Control by Commission</u>
Banta Carbona	July 30, 1934
Byron-Bethany	November 13, 1935
Corcoran	August 9, 1933
El Camino	August 8, 1939
Grenada	August 24, 1935
James	September 7, 1937
Lindsay-Strathmore	July 7, 1933
Merced	August 22, 1933
Montague	September 12, 1933
Naglee-Burk	August 3, 1934
Oroville-Wyandotte	August 7, 1933
Provident	August 5, 1936
Thermalito	August 24, 1933
Tracy Clover	August 10, 1933
Waterford	May 10, 1933

A number of these districts have practically completed their refunding operations and are only technically in default. It is anticipated that at least ten of them will be released from supervision of the Commission during the coming year. In two or three cases where loans have thus far been refused by the Reconstruction Finance Corporation there does not appear to be any immediate prospect of working out a satisfactory solution of financial matters. Efforts are being continued, however, to reach agreements that will be acceptable to both the districts and their creditors.

STATISTICAL INFORMATION

A summary of information reported for the year 1940 by eighty-four active irrigation districts is contained in the tabulations following this section. The data submitted covers water supply, crop reports, assessment levies, financial matters and the status of outstanding bond issues as of the close of the period. A brief discussion of these tables is given to compare figures presented with those of previous years and to bring out any changes that have taken place.

Source of Supply, Storage, and Distribution of Water

Table I shows the source of each district's water supply, capacities of reservoirs, storage on hand at the beginning and end of the season, the amount of water diverted by gravity, by district pumps, or pumped from district wells, and the use made of that water. The number of district wells in operation or other pumping units reported is given together with the installed horsepower and average pumping lift.

There were twenty-one major storage reservoirs operated by irrigation districts during the season with a total combined capacity of about 1,097,000 acre feet. The stored water at the beginning of the season was 800,600 acre feet and at the end of the season 191,200 acre feet. The total amount of water diverted by all districts was reported as 8,559,600 acre feet, of which approximately 87 per cent was by gravity, 9 per cent by pumping from streams and 4 per cent by pumping from district wells.

The districts operated 629 wells for irrigation or drainage purposes and 213 other pumping plants. For all pumping opera-

tions an installation of 41,692 horsepower was reported, 95 per cent of which was supplied by electric motors while the remaining 5 per cent was about equally divided between gas and diesel engines.

Irrigation District Acreages and Crop Reports

Table II gives the gross and irrigable acreage of each district, the area assessed and the amount of tax deeded land. It also shows irrigated and dry-farmed acreage cropped in 1940, as well as a segregation of the various crops produced where this information was known.

The total gross area of 96 districts listed is 3,500,413 acres, of which 2,903,360 acres or 83 per cent are considered irrigable lands. There were 2,744,022 acres assessed in 1940 and the districts held by tax deeds 329,866 acres, a part of which was farmed or leased out on a cash or crop share basis.

The total cultivated area in all districts reporting in 1940 was 1,844,981 acres, of which 1,688,847 acres were irrigated and 156,134 acres were dry-farmed. There were also 314,810 irrigated acres reported double cropped making a total of 2,003,657 irrigated acres harvested during the season. Approximately 66½ per cent of the irrigable area in all districts reporting was irrigated.

A summary of the kind and acreage of irrigated crops including double crops reported for the season of 1940 is shown in the following tabulation:

Summary of Crops Reported for 1940

<u>Kind of Crop</u>	<u>Acres</u>	<u>Per cent of Total</u>
Alfalfa and Ladino Clover	442,414	22.1
Cotton	36,621	1.8
Rice	48,470	2.4
Grain and Grain Hay	236,473	11.8
Field and Truck	518,317	25.9
Grapes	81,144	4.0
Deciduous fruits, Nuts, Olives	103,708	5.2
Citrus and Avocados	30,227	1.5
Irrigated Pasture	98,625	4.9
Not Segregated	<u>407,658</u>	<u>20.4</u>
Total	2,003,657	100.0

Assessments, Tax Certificates, Tax Delinquent Lands

Table III sets up the total assessed valuations, the assessment rates, and the amounts of assessment levies made by each of the active districts for the last two assessment years. The payment of assessments is usually made in two installments, the first falling delinquent on the last Monday in December and the second on the last Monday in June of the following year. The total amount of assessments levied for 1939-40 by seventy-five districts was \$4,712,233. The amounts collected by seventy-one of the districts reporting was \$4,157,483. Average delinquencies for this group as a whole was 10.4 per cent, the range being from zero to 46.1 per cent. The high delinquency indicated by this latter figure occurred however, in a district that suffered severe flood damages during the extremely high stages of Sacramento River in February and March of 1940.

The total value of tax sale certificates held by the districts at the end of 1940 amounted to \$1,318,798 while a similar figure for the preceding year was \$1,688,008, showing a decreasing

trend in the sum of these holdings.

The total number of acres of tax deeded land held by all districts was 329,866 acres, while an additional area of 10,397 acres that had been delinquent for three years or longer was subject to acquisition by tax deed procedure.

Thirty-six districts reported a total of 27,643 acres of tax deeded land sold back to private ownership and restored to the assessment rolls during the year 1940.

Annual Financial Reports - Receipts and Disbursements

In Table IV an attempt has been made to show for the first time in these publications a summary of the annual financial statement of each district. The cash on hand at the beginning of the year is given together with a segregation of receipts from various sources, the amount of disbursements, the purposes for which made, and the cash remaining on hand at the close of the year.

A summation of items for the 81 districts listed is impressive as it indicates the magnitude of the business transacted by these organizations during the twelve month period. The major items of income were derived from assessments, power sales and water sales. The larger items of disbursement were maintenance and operation, capital expenditures, and bond interest paid. Total receipts from all sources were \$13,844,819.79 while total expenditures for the year amounted to \$12,761,337.57.

Summation of Financial Reports
from Eighty-one California Irrigation Districts

Cash on hand January 1, 1940, all districts \$ 10,732,132.60

Warrants previous years paid ..	<u>158,607.90</u>	<u>12,761,337.57</u>

Cash on hand December 31, 1940 \$ 11,855,614.82

Data Relating to Bonds

Table V presents the status of irrigation district bonds outstanding as of January 1, 1941. Seventy-three districts are listed as having issued \$80,130,485 in original securities and \$36,419,675 in refunding bonds. The total amount of bonds sold and exchanged amounted to \$101,228,744. Of this amount \$11,748,406 were paid or retired and \$89,397,338 in bonds were still outstanding as of the first of the year. The Reconstruction Finance Corporation held \$41,791,362 of these securities for loans advanced to the districts in their refinancing operations. The remaining \$47,605,976 in outstanding bonds were in the hands of other security holders.

The amounts of the original loans made by R.F.C. to indi-

vidual districts had in many cases been reduced by cash payments. The amount of all R.F.C. loans outstanding was \$18,919,832. All interest due on loans made by R.F.C. had been paid with the exception of \$175,859 by two districts where funds had been impounded by litigation.

The reported amount of unpaid matured coupons on old bond issues was \$18,700,186 and unpaid matured bond principal was \$7,627,903. Old bond issues are still carried in the tabulations as an obligation of any particular district until the refunding procedure has been closed and the old bonds cancelled. Refunding bonds to cover R.F.C. loans have been voted in most cases, but have not been immediately issued, as R.F.C. preferred to hold the old securities pending settlement of litigation with dissenting minority bond holders.

The amount of old bonds outstanding does not represent the true financial condition of a district that is in the process of refinancing for the old securities are merely held by R.F.C. for repayment upon the same terms that would be the case if refunding bonds had been issued. The actual capital debt is that represented by the loan on which interest is being paid at 4 per cent, plus the discount value of the old bonds that have not been deposited under the plan.

As of January 1, 1941, there were still thirty-one districts listed as having over due and unpaid obligations outstanding in some amount, but in twenty-one of these districts refinancing procedure was well advanced and final settlements were expected to be accomplished within the period of a few months.

The favorable decisions of the Federal Circuit Court of Appeals, upholding the plans of composition of indebtedness of the Merced, Lindsay-Strathmore, Corcoran, James and Palo Verde irrigation districts, were regarded as setting a precedent for the speedy settlement of other pending cases.

(d) Gronada refinanced \$136,000 in bonds through loan of \$20,750 advanced by individuals. Warrants were issued in payment of loan. Bonds of \$6,000 still held in escrow as additional security on loan.

(e) Maxwell bonds were all acquired by pool of former landowners. District has taken title to all the land.

(p) El Nido, by private agreement, extended maturity dates of bonds and refunding warrants, and reduced interest rate on bonds from 6% to 4½%, from July 1, 1939.
