INTRODUCTION

A series of annual reports on irrigation districts in California has been issued by the Division of Water Resources to supplement and bring up to date the statistical information contained in Bulletin No. 21 which was published in 1929. Bulletins No. 21-A to No. 21-O, inclusive, are annual supplements which cover the period from 1930 through 1943. This report, Bulletin No. 21-P, is the sixteenth of the lettered series and contains data compiled for the seven-year period, 1944-1950.

This report provides information on 108 irrigation districts and four water storage districts which were in existence as of 1950. At that time they embraced within their boundaries a total of 4,236,745 acres of which about 2,332,000 acres were irrigated. Total water diversions from wells, booster pumps, and surface sup-

plies amounted to over 11,240,000 acre-feet. Assessed valuations exceeded \$254,000,000. Total outstanding bonded indebtedness was reported to be more than \$73,000,000.

Districts boards of directors are required by law to submit reports of district operations, and to publish verified statements of their financial condition immediately following the regular monthly meetings in March of each year. Information contained in this bulletin has been obtained from these annual reports which are submitted to the California Districts Securities Commission and from records on file in the office of the State Engineer.

A pocket map is enclosed which shows the names and locations of California irrigation districts and water storage districts.

INTRODUCTION

The purpose of this study is to investigate the effects of various factors on the performance of a system. The study is divided into two main parts: a theoretical analysis and an experimental investigation. The theoretical part discusses the underlying principles and models, while the experimental part presents the results of the conducted experiments. The findings are discussed in the context of existing literature and their practical implications are highlighted.

DISTRICTS ORGANIZED

Nine irrigation districts were organized during the period 1944-50. Five of them are located in the San Joaquin Valley in the service area of the Friant-Kern Canal of the Central Valley Project. All of the districts, in accord with the provisions of the State Water Code, were reported upon by the State Engineer prior to their formation.

As of the close of 1950, two new areas were contemplating district formation, the proposed Central California and South Bay Irrigation Districts.

Descriptions are given in this report of the following nine irrigation districts organized during the period 1944-50:

Durham Irrigation District
El Cajon Valley Irrigation District
Hills Valley Irrigation District
Ivanhoe Irrigation District
Lower Tule River Irrigation District
Porterville Irrigation District
Solano Irrigation District
Steel Canyon Irrigation District
Stone Corral Irrigation District

Durham Irrigation District

Location: Unincorporated town of Durham, six miles south of Chico, in Butte County.
Date of Organization Election: February 17, 1948.
Gross Area: 93 acres.
Office Address: Durham.

The district was organized for the purpose of providing an entity to acquire the properties of Butte County Water Works District No. 1 and to operate them. The State Engineer had approved formation of the district, and the votes cast at the formation election were 101 for to 2 against.

History

In 1935, the Bidwell Municipal Utility District took over a small private water utility that was inadequately serving the town of Durham. The utility district drilled a new well, installed pumping equipment, and started serving water to customers. The service area soon embraced the entire town of Durham, supplying 86 services with domestic and commercial water supplies, as well as water for fire protection.

The utility district was dissolved, following an election called for that purpose, and all of its properties were turned over to Butte County. A county water works district was then organized to operate the Durham water system under the county board of super-

visors. However, this method of operation resulted in the rendering of unsatisfactory service, and local interests expressed a desire to have a type of district that could be managed by a local board of directors. The Durham Irrigation District was therefore formed and approved at an organization election on February 17, 1948.

Present Development and Operating Conditions

The irrigation district acquired the water system, valued at \$13,850, without cost. The entire water supply is obtained from wells. Ground water of good quality is obtainable within reasonable pumping lifts.

At the time of district formation there were approximately 115 residential and commercial service connections, whose demands overtaxed the water system. Improvements were needed requiring the installation of additional wells, pumping equipment and service mains. Therefore, later in 1948, the district received approval from the California Districts Securities Commission to issue \$8,150 in five-year warrants, the proceeds from the sale thereof to be used in rehabilitating and augmenting the existing system.

The district has levied no taxes but obtains all funds required from the sale of water. Population of the district is estimated to be 600.

El Cajon Valley Irrigation District

Location: About 12 miles east of San Diego Civic Center, in San Diego County.
Date of Organization Election: November 17, 1950.
Gross Area: 5,900 acres.
Office Address: Route 2, Box 324, Lakeside.

The district was organized for the purpose of developing an additional water supply from wells in the El Cajon Valley area and to negotiate with the San Diego County Water Authority for an imported supply of water from the Colorado River.

The State Engineer reported favorably upon the formation of the district, but recommended a reduction in size of the proposed district due to the difficulty of obtaining an adequate water supply to serve all of the lands proposed for inclusion in it. On November 17, 1950, after a reduction in size of the proposed district was effected, an election was held and the district formation was approved by a vote of 619 for to 6 against.

Description of District

The district is situated adjacent to and east of La Mesa, Lemon Grove and Spring Valley Irrigation Dis-

trict and only a short distance south of Lakeside Irrigation District. It lies in El Cajon Valley which drains northwestward to the nearby San Diego River. Elevations vary from about 1,000 feet on the rim portion to less than 400 feet in the lowest lying valley area. Precipitation averages about 13 inches annually over the area.

The district consists of 20 separate parcels comprising approximately 5,900 acres, which for the most part are interspersed with tracts included within the foregoing La Mesa District. The assessed value of all lands, including improvements, is reported to be in excess of \$1,800,000. The area has a population of nearly 5,000 and is rapidly being subdivided and developed to residential or suburban types of uses. The towns of El Cajon and Bostonia are excluded from the district.

A cultural survey of the district area made by the Division of Water Resources in 1949 indicated that almost 1,000 acres were irrigated, with oranges, truck crops and pasture, in the order named, being the most important irrigated crops and occupying about 80 per cent of the total irrigated area. Most of the nonirrigated land was either covered with brush or in dry-farmed crops, idle land, and suburban developments.

Water Supply

The main pipe lines of the La Mesa, Lemon Grove and Spring Valley Irrigation District traverse the district area, but due to that district's limited available water supply, it cannot serve the El Cajon District from this source. The present water supply of the El Cajon District comes from more than 300 wells, most of which have small capacity and are of shallow depth. Granite bedrock is usually encountered at depths of 60 to 70 feet. Ground water is diminishing rapidly with the increase in number of new pumping developments.

A few wells located along the western side of the area have been drilled through bedrock to depths of more than 500 feet and have apparently encountered lower water bearing strata. Exploitation of this lower lying water bearing strata appears to offer possibilities for augmentation of the presently inadequate supply. However, local supplies are regarded as being inadequate to meet the district's water requirements and importation of a supplemental water supply is necessary for full development of its area.

Hills Valley Irrigation District

Location :	About 2 miles north of Orange Cove, in Fresno and Tulare Counties.
Date of Organization Election :	August 17, 1948.
Gross Area :	2,600 acres.
Office Address :	Fresno, T. W. Patterson Building, c/o Ronald B. Harris.

The Hills Valley Irrigation District was organized to give the landowners the opportunity to obtain, as a

district, a supplemental water supply from the Central Valley Project or some other source. In approving formation of the district, the State Engineer recommended that certain lands in the north portion could be excluded, but that certain lands to the west could be included. Formation occurred without adoption of these recommendations.

Description of District

The district area was formerly a part of the old Foothill Irrigation District, which was dissolved in 1933 as a result of a court order which prevented it from obtaining a water supply from the Kings River.

The lands of the district comprise approximately 2,600 acres located adjacent to the foothills north of Orange Cove, in Hills Valley, Fresno County, and along Wooten Creek to that portion which extends into Tulare County. The principal part of the area, estimated as 2,080 acres, lies in Fresno County while the remaining 520 acres are in Tulare County.

Topography is gently rolling in character with a slope to the south of about 25 feet per mile. Elevations range from 435 feet at the southwest corner to 650 feet at the northern tip of Hills Valley. The district occupies most of the "cove" formed by Hills Valley Creek and is within the Sierra Nevada foothill thermal area. Climatic conditions are believed favorable for the growing of citrus and other specialty crops. Precipitation averages about 15 inches per year over the area.

The soils are alkali free and are well suited to irrigation except for about 207 acres of land within the district, classified as rocky sandy loam and rough stony land, which are regarded as nonirrigable. The ultimate net irrigable area is estimated to be 2,000 acres. Irrigated agriculture has not been developed appreciably; however, dry farming has been practiced extensively within the district, especially during years of normal or above normal rainfall. The lands have been used for dry-farmed grain and pasture.

In 1948 there were reported nine land ownerships in the district. There are no towns or settlements within the area, the nearest urban community being Orange Cove in Fresno County.

Water Supply

Small intermittent streams entering this region from the hills are soon lost in the porous soils of the valley floor. Applications for appropriation of water from Hills Valley and Wooten Creeks have been filed by the district for irrigation of lands within the district. This source of supply is not considered adequate to meet the requirements. Small areas within the district have been irrigated from private wells, but ground water recharge is also inadequate to provide a dependable supply. Importation of water from an outside source is regarded as necessary for any future complete development to irrigated agriculture.

The Friant-Kern Canal crosses the southwest tip of the district at the point of its lowest elevation. All water from the canal would have to be pumped to district lands.

Ivanhoe Irrigation District

Location: 6 miles northwest of Visalia, in Tulare County.
 Date of Organization Election: January 8, 1948.
 Gross Area: 11,117 acres.
 Office Address: Ivanhoe, P. O. Box 96.

The Ivanhoe Irrigation District was organized for the purpose of acquiring a supplemental water supply from the Friant-Kern Canal of the Central Valley Project. In approving formation of the district, the State Engineer suggested that inasmuch as a portion of the lands lying to the west would be benefited by district operations, they be included; however, this was not done. Formation was approved by a vote of 170 for to 70 against.

History

Although the organization of the district is recent, irrigation has been practiced in the area since about 1919. A previous attempt to form a district, which proposal had been approved by the State Engineer, and which was to have contained about 16,000 acres, failed to carry by a vote of 160 against to 128 for at an election held February 13, 1937. By 1946, about 90 percent of the irrigable lands within the present district's boundaries had been developed for irrigated farming.

Description of District

The district lies mostly on the transition slopes between the foothills and the valley floor and partly on the valley floor. General slope of the land is toward the west at about 15 feet to the mile. Elevations vary from 350 to 425 feet above sea level. Approximately 90 percent of the district consists of an old alluvial plain or terrace. The remainder of it consists of small portions of foothill lands, recent stream deposits adjoining Cottonwood Creek, and adobe clay soils which occupy the smooth valley plain near the foothills. The gently rolling terrain in its native state is underlain for the most part by hardpan at depths varying generally from 8 to 30 inches.

The gross area of the district is 11,117 acres, and all of it lies below and west of the Friant-Kern Canal. The lands have been classified by the U. S. Bureau of Reclamation as follows:

Land classification	Gross acreage	Percent of total
1	22	0.2
2	8,598	77.3
3	2,185	19.7
4	58	0.5
6	254	2.3
Totals	11,117	100.0

The ultimate net irrigable area is estimated to be 10,000 acres.

The area irrigated in the district for the season of 1946 was 8,865 acres with the following crop pattern:

	Acreage
Alfalfa	92
Irrigated pasture	123
Field crops	275
Truck crops	600
Citrus	2,424
Deciduous	748
Grapes	3,889
Olives	198
Cotton	113
Irrigated hay and grain	403
Total	8,865

About 200 acres were double-cropped and are not included in the foregoing acreages. By 1950 the irrigated acreage had increased to about 9,000 acres. The district lies within the thermal zone which exists along the foothills of the Sierra Nevada.

In 1945 it is reported that there were about 258 ownerships in the district, of which 254 were individually owned parcels amounting to 9,781 acres, or 88 percent of the district's gross area, with the remaining acreage being owned by four corporations. The total assessed valuation placed on the district lands by the district in 1950 was \$1,497,358.

Redbanks, estimated population 100, is the only community development inside the district boundary. Ivanhoe is outside of, but adjacent to, the southwestern boundary. Adequate rail and highway facilities serve the area.

Water Supply

The water supply of the Ivanhoe Irrigation District, prior to the construction of the Friant-Kern Canal of the Central Valley Project, was derived from rainfall, foothill drainage, surface diversion from Wutchuma Ditch, and ground water inflow. Average precipitation over the district is about 13 inches annually. The principal portion of the local supply consisted of ground water inflow from the south, east and west induced by overdraft within the district. Seepage losses from the Kaweah River on the southeast and St. Johns River on the southwest are the main contribution to underflow into the district. Cottonwood Creek, an intermittent stream which cuts through the northeasterly corner, adds to the underground water within the district. Depths to granite formation under the district vary from about 100 feet in the northeastern portion to about 300 feet in the central and western areas.

Records of depth to ground water, which were started by the State in 1921, show that the greatest average depth to ground water occurred in 1948. During the period 1921-1948, the ground water lowered from an average depth of 24 feet to 75 feet, a total lowering of 51 feet, and an average annual lowering of 1.8

feet. The average ground water level lowered 35 feet during the period 1943-48, an average lowering of 5.8 feet. Increased irrigated acreage and below normal runoff were responsible for this rapid depletion.

In order to remedy the foregoing situation, and to carry out the primary purpose for formation of the district, the irrigation district, with the approval of the California Districts Securities Commission, executed a contract with the Bureau of Reclamation on September 23, 1949. This contract specifies that the district is to receive an annual supplemental supply of 7,700 acre-feet of Class 1 water, and a maximum annual supplemental Class 2 water supply of 7,900 acre-feet, from the Friant-Kern Canal. This water supply will supplement the ground water obtained from deep percolation into the district and present surface diversions. The foregoing contract also provided for construction of a distribution system to serve the district lands which, based upon 1949 prices, was estimated to cost \$1,589,807.

Lower Tule River Irrigation District

Location:	About 5 miles south of Tulare, in Tulare County.
Date of Organization Election:	December 28, 1949.
Gross Area:	102,684 acres.
Office Address:	Woodville, P. O. Box 511.

The Lower Tule River Irrigation District was organized for the purpose of obtaining a supplemental water supply from the Friant-Kern Canal of the Central Valley Project. The State Engineer approved formation of the district. Votes cast at the formation election were 269 for to 23 against.

Description of District

The district is bounded on the northeast by the Lindmore Irrigation District, on the east by Porterville Irrigation District, on the southeast by the Sancelito Irrigation District, and on the west by Corcoran Irrigation District. The Friant-Kern Canal crosses the district area along its southeastern edge. Tule River and its tributary Porter Slough traverse the length of the district, and Elk Bayou, a channel of the Kaweah River, passes through the northwestern part of the district.

The terrain is generally smooth with slopes to the west averaging 12 feet per mile in the eastern part of the district to 10 feet per mile in the western portion.

The typical semiarid climate of the Upper San Joaquin Valley prevails throughout the district. Summers are long and hot and dry, the winters, short and usually mild. Short periods of freezing temperatures are experienced at infrequent intervals. The average annual precipitation over the district is about nine inches.

The gross area of the district is 102,684 acres, all of which is situated below and west of the Friant-Kern Canal. Based upon a U. S. Bureau of Reclamation land

survey which was field checked and modified by the Division of Water Resources, the lands have been classified as follows:

Land classification	Gross acreage	Percent of total
1 -----	31,951	31
2 -----	28,911	28
P * -----	950	1
S ** -----	25,008	24
6 (nonirrigable) -----	15,864	16
Total -----	102,684	100

* Land of inferior quality and of narrow range in agricultural possibilities, but suited for irrigated pasture.

** Land definitely of inferior quality and of questionable agricultural possibilities because of moderate salt accumulation in the soil.

The net ultimate irrigable area is estimated by the district to be 78,000 acres.

Irrigation development has been limited by the fluctuating runoff of the Tule River, decline in ground water levels, and increasing concentrations of injurious salts found progressively from east to west in the district. Consequently, most of the irrigation development has been located east of U. S. Highway 99. In the westerly areas which contain the highest alkali concentrations very little farming had developed until in recent years when farm prices were high.

The area irrigated in the district in the season of 1950 was 66,787 acres which was planted to the following crops:

Crop	Acreage	Percent
Irrigated pasture -----	4,435	6.7
Alfalfa -----	15,925	23.9
Grapes -----	1,608	2.4
Deciduous orchards -----	1,243	1.9
Cotton -----	25,584	38.4
Olives -----	61	0
Truck crops -----	349	0.3
Potatoes -----	1,849	2.9
Miscellaneous field crops -----	2,890	4.4
Irrigated hay and grain -----	12,319	18.3
Sugar beets -----	527	0.8
Totals -----	66,787	100.0

Water Supply

Prior to obtaining water from the Central Valley Project in 1950, the water supply was obtained principally by pumping from wells with surface diversions from Tule River supplementing this supply. Surface water has been diverted from the Tule River to lands in the district by the following companies and riparian landowners:

Company	Service area in acres		Percent district
	Total	In district	
Little Pioneer Ditch ---	900	900	100
Stockton Ditch -----	1,280	700	54
Woods Central Ditch ---	2,380	2,100	88
Poplar Irrigation -----	8,980	3,700	41
Riparian lands -----	5,908	5,908	100
Totals -----	19,448	13,308	68

Records of the depth to ground water, which were started by the State in 1921, show that the greatest average depth to ground water occurred in 1948. Dur-

the period 1921-1948, the average depth to ground water lowered from 22 feet to 83 feet, a total lowering of 61 feet, or an average annual lowering of 2.2 feet. The average ground water level lowered 33 feet during the period 1943-48, or an average of 5½ feet annually. Increased irrigated acreage and below normal runoff were responsible for this rapid depletion.

In order to correct this condition the district had applied by the end of 1950, for an annual supplemental supply of 40,000 acre-feet of Class 1 water and a maximum of 274,000 acre-feet of Class 2 water from the Bureau of Reclamation.

Porterville Irrigation District

Location : 1 mile west of Porterville, in Tulare County.
 Date of Organization Election : July 28, 1949.
 Gross Area : 17,225 acres.
 Office Address : Porterville, Rt. 2, Box 76

The Porterville Irrigation District was organized primarily for the purpose of obtaining a supplemental water supply from the Friant-Kern Canal of the Central Valley Project. Formation of the district was approved by the State Engineer. Votes cast at the formation election were 111 for to 7 against.

Description of District

The district is bounded by the Lindmore Irrigation District on the north, open land on the east, and the Lower Tule River Irrigation District on the west and south. The greater portion of the district area is of fairly smooth terrain with a slope of 10 to 25 feet per mile. Of lesser extent is an area of rolling terrace land. Elevations vary from 450 feet in the eastern portion to 355 feet in the southwest portion. Lands of the district area are chiefly of recent alluvial origin consisting of sandy loam and loam. These soils have desirable characteristics, are fertile, easily tilled, and have a wide range of adaptability for irrigated crops. Sandy soils which are found along the Tule River channel have a narrow range in agricultural possibilities. Several small patches of slightly alkali soil exist in the district, however, they are suitable for cultivation and production of crops under irrigation.

The gross area of the district is 17,225 acres, excluding the Friant-Kern Canal right of way. Based upon a land survey conducted by the U. S. Bureau of Reclamation and modified by the Division of Water Resources, the lands have been classified as follows:

Land classification	Gross acreage	Percent of total
1	12,370	72
2	785	5
P*	3,835	22
6	235	1
Totals	17,225	100

* Land of inferior quality and of narrow range in agricultural possibilities but suited for irrigated pasture.

The ultimate net irrigable area is estimated to be 15,000 acres.

Irrigated agriculture commenced about 35 years ago in the area now occupied by the district. In 1920, 6,597 acres of land were irrigated and the area has increased steadily to the present time. The important crops in the district have been cotton, alfalfa, deciduous orchards, truck crops, and irrigated pasture.

A crop survey made by the district in 1948 indicated that 14,156 acres of the 16,745 gross acres then included in the proposed district were irrigated. This survey showed the following crops grown:

Alfalfa	3,244 acres
Cotton	6,456 acres
Other field crops	8 acres
Truck crops	1,028 acres
Deciduous fruits, nuts, and olives	1,553 acres
Grapes	352 acres
Irrigated pasture	995 acres
Irrigated hay and grain	520 acres
Total	14,156 acres

The semiarid climatic characteristics of the Upper San Joaquin Valley prevail in the Porterville Irrigation District area. Summers are long, hot and dry, while the winters are usually mild. Killing frosts occur at infrequent intervals. Precipitation usually occurs in small amounts and averages about 10.5 inches per year.

There are no towns or settlements within the district. However, adequate rail and highway and marketing facilities serve the area.

Water Supply

Prior to obtaining water from the Central Valley Project for the first time in 1950, the water supply of the Porterville Irrigation District area was obtained from the Tule River by surface diversions and by pumping from ground water. Surface water is diverted from Tule River to lands in the district by the following companies:

Company	Service area in acres		Percent in district
	Total	In district	
Pioneer Water	2,460	120	5
Porter Slough Ditch	2,360	1,060	45
Poplar Irrigation	8,980	4,000	45
Hubbs and Miner Ditch	2,000	1,630	81
Rhodes and Fine Ditch	1,180	1,180	100
Stockton Ditch	1,280	580	45
Woods Central Ditch	2,360	280	12
Totals	20,620	8,850	43

Records of depth to ground water, which were started by the State in 1921, show that the greatest average depth to ground water occurred in 1948. During the period, 1921-1948, the depth to ground water table in the district lowered from an average of 16 feet to 55 feet, a total lowering of 39 feet, or an average annual lowering of 1.4 feet. The ground water level lowered 26 feet during the period, 1943-1948, or an average of 4½ feet per year. Increased irrigated acreage and below normal runoff were responsible for this rapid depletion.

In order to remedy this situation, the irrigation district had applied, by the end of 1950, for a supplemental water supply of 16,000 acre-feet of Class 1 water and a maximum of 30,000 acre-feet of Class 2 water from the Bureau of Reclamation.

Solano Irrigation District

Location :	Along U. S. Highway 40, between Cordelia and Dixon, Solano County.
Date of Organization Election :	February 26, 1948.
Gross Area :	81,825 acres.
Office Address :	Fairfield, 754 Texas Street.

The district was organized for the purpose of perfecting an organization that could participate in studies of plans for furnishing water from Putah Creek and its tributaries to the lands in the district, and also to participate in studies of, and negotiations for, financing works for supplying water to, and distributing it in, the district. The State Engineer approved formation of the district and votes cast at the formation election were 912 for to 77 against.

History

In October, 1920, a petition for formation of the Suisun Irrigation District was presented to the Solano County Board of Supervisors. This district proposed to lift water from the Sacramento River at Lindsey Slough and convey it to the Suisun-Fairfield area. In November, 1920, the State Engineer reported on the proposal to the effect that it was physically feasible but economically impracticable. The district was organized, however, in the following year, and embraced 26,173 acres. Engineers appointed by the district in 1922, subsequently rendered a report that likewise was unfavorable to the original proposal. As a result of this, it was dissolved in May, 1926, at the request of landowners of the district.

Also in about 1920, agitation began for organizing an irrigation district in the Dixon area which would embrace about 65,000 acres. During the next eight years several reports on the possibility of bringing water to the area were prepared by both the State Engineer and local interests. Finally, in 1929, a petition was presented to the county board of supervisors requesting formation of a 5,589-acre district to be known as the Dixon Irrigation District. It was proposed to obtain water from Clear Lake and Cache Creek through purchase from the Clear Lake Water Company. In 1930, the State Engineer reported adversely upon formation of the district inasmuch as it was believed that the proposed source of water supply was inadequate. The district was never organized.

In 1946, action was started to form the present district in order to, among other things, contract with the United States for a water supply from the proposed

Monticello Reservoir and related developments of Putah Creek.

Description of District

The district lies entirely within Solano County and extends from Cordelia and Green Valley on the west northeasterly about 25 miles, to about two miles beyond the City of Dixon.

The gross area approximates 91,000 acres, but exclusion of some 23 parcels of land and the principal cities and railroads and main highways in the area have resulted in a net district area of about 81,825 acres.

Topographically the area is relatively flat. In the north and central sections of the district the general slope is from west to east, with a fall of about 10 to 15 feet per mile. However, in the area west of Fairfield the general slope is southerly, with a fall of about 20 feet per mile. Near Vacaville, and also southwest of it there are a number of isolated hills and ridges which for the most part have been excluded from the district.

The climate of the area is generally the typical two season climate of the lower Sacramento Valley. However, the area from about Suisun-Fairfield westward is appreciably affected by cooling winds and occasional high fog that blow in during the summer months from San Francisco Bay and the ocean. Long-time seasonal precipitation averages for selected points are as follows: Davis, a short distance northeast of the district 17 inches; Vacaville, 25 inches; and Suisun, 19 inches.

The soils of the district area have been classified and reported upon in the University of California Soil Survey of the Suisun Area, Series 1930, No. 18, and Soil Survey of the Dixon Area, Series 1931, No. 7. Based upon a county-wide land classification conducted in 1947 by the Bureau of Reclamation the district lands are rated as follows:

Land class	Gross acreage
1 -----	26,000
2 -----	35,000
3 -----	15,825
6 (nonirrigable) -----	5,000
Total -----	81,825

The best soils of the district, principally surrounding the town of Dixon, are the gently sloping alluvial fans of recent origin built up by Putah Creek which flow across the Sacramento Valley floor about two miles northerly of the north boundary of the district. Other smaller areas of good land are situated in Vaca Valley, Suisun uplands, and in Green Valley north of the town of Cordelia. These soils are adapted to a wide variety of crops.

The soils of the plains which are located principally south of Dixon and east of Fairfield are alluviums of older origin and therefore are more compact, tight and heavier textured. They are more adaptable to the growing of shallow-rooted crops.

A detailed crop survey of the district area has not been made. However, from incomplete crop survey data compiled in 1946 the following approximate crop acreages are estimated:

Irrigated pasture and alfalfa	4,000 acres
Irrigated field and truck crops (tomatoes, onions, sugar beets, milo)	2,000 acres
Deciduous fruits, nuts, and grapes (about one-half is irrigated)	14,000 acres
Grain and other nonirrigated field crops	20,000 acres
Idle cropland and dry pasture	34,000 acres
Total	74,000 acres

The district area is adequately served by transportation, processing and marketing facilities. The main line of the Southern Pacific Railroad and U. S. Highway 40 traverse the district from one end to the other. The Sacramento Northern Railroad and numerous county roads also serve the area. Light-draft vessels can reach Suisun from San Francisco Bay. The incorporated cities of Dixon, Suisun-Fairfield, and Vacaville provide processing and marketing facilities.

Water Supply

All irrigation water is supplied by ground water pumping. The small amount of land in the district which is presently irrigated is indicated in the foregoing tabulation. The acreage is limited principally by the supply of ground water. Ground water conditions vary throughout the district. Good wells are found in the northern portion of the district. These wells are fed by strata fanning out from Putah Creek. South of Dixon and east of Fairfield good wells are difficult to obtain. In the area west of Fairfield, although the conditions for storage and recovery are reportedly good, pumping exceeds recharge.

The full irrigation of the district will require a supplemental water supply. Alternative sources of such a supply are available and are being given consideration. As of the end of 1950, the district was planning to file an application with the Division of Water Resources for permission to divert 1,000 second-feet of water from Lindsey Slough, a tributary channel of the Sacramento River.

Steel Canyon Irrigation District

Location:	18 miles east of downtown San Diego, in San Diego County.
Date of Organization Election:	August 1, 1947.
Gross Area:	504 acres.
Office Address:	Spring Valley, Star Route.

The Steel Canyon Irrigation District was organized for the purpose of obtaining a supplemental water supply from the San Diego County Water Authority. Formation of the district was approved by the State Engineer. Votes cast at the formation election were 26 for to 1 against.

History

Irrigated agriculture was first begun about 30 years ago at which time an ample water supply was obtained from shallow wells. During the ensuing years it became necessary to lower the wells to bedrock. As the irrigated acreage increased the situation became more critical. By 1945 it was impossible to irrigate all of the planted area even though the sprinkler method of irrigation was generally practiced. The important crops during this period were citrus, mainly lemons.

Description of District

The district is located in the foothill area of western San Diego County. Steele Canyon Creek, a tributary of the Sweetwater River, traverses the district's lands and joins the main Sweetwater River at a point one mile west of the district's boundary. Slopes are generally to the southwest and average about 120 feet per mile. Elevations range between 430 and 1,167 feet; however, the major portion of the district lies above elevation 650 feet. The district consists chiefly of a rolling terrain with approximately 116 acres classified as rough stony land.

A rating of the soils, based upon a soil survey of the El Cajon area conducted by the U. S. Department of Agriculture in cooperation with the University of California, is presented in the following table:

<i>Soil series</i>	<i>Index</i>	<i>Soil grade</i>	<i>Acres</i>
Greenfield			
Sandy loam	95	1	133
Ramona			
Sandy loam	95	1	87
Fallbrook			
Sandy loam	40	3	168
Rough stony land	3	6	116
Total			504

The ultimate net irrigable area is estimated to be 275 acres.

A crop survey of the area was made by the district in 1947. Crops grown in that year are shown in the following table:

<i>Crop</i>	<i>Acreage</i>
Lemons	125.0
Oranges	12.0
Avocados	5.0
Walnuts	3.5
Vines	1.5
Apricots	1.7
Total irrigated	148.7
Grain (nonirrigated)	90.0
Total area cropped	238.7

The area lies in a thermal zone which is favorable for the growing of citrus crops.

In 1947 there were reportedly 26 land ownerships, title to which was vested in 43 individual owners, in the district varying in size from one-half acre to 76 acres. Only four of the holdings equalled or exceeded

40 acres. The average sized holding of the remaining 22 owners was 13 acres. The total assessed valuation placed on the district lands in 1950 by the district was about \$83,000.

There are no towns located within the district and its population consisted of about 50 people in 1947. The Cities of El Cajon and La Mesa are located within six to eight miles of the district.

Water Supply

The sole water supply, exclusive of rainfall, within the district has been pumped ground water. Intermittent surface flows occur in Steele Canyon Creek during periods of winter and spring rainfall and contribute to ground water replenishment in areas bordering the creek. A few low dams have been constructed in the creek bed in an attempt to facilitate percolation into the adjacent lands. The recharge, however, has been insufficient to support the existing demand.

All irrigation and domestic water within the district is now supplied from wells, some of which are from 70 to 90 feet in depth to granite formations. At present the ground water storage has been depleted mainly because of the increased irrigated acreage and the deficient rainfall in recent years. In order to remedy this situation the district proposes to acquire an annual supplemental water supply of 240 acre-feet from the San Diego County Water Authority. In this regard, the district has considered the possibility of constructing a dam and reservoir at a site three-eighths mile upstream from the easterly boundary of the district and within the Steele Canyon Creek bed. Such a development could serve a dual purpose, to regulate imported water and to divert onto the district lands the flood flows of Steele Canyon Creek.

Stone Corral Irrigation District

Location: 10 miles northeast of Visalia, in Tulare County.
 Date of Organization Election: June 22, 1948.
 Gross Area: 4,927 acres.
 Office Address: 127 North Church Street, Visalia.

The Stone Corral Irrigation District was organized for the purpose of obtaining a supplemental water supply from the Friant-Kern Canal of the Central Valley Project. Formation of the district was approved by the State Engineer. Votes cast at the formation election were 21 for to 1 against.

History

Irrigated agriculture was started in the area now occupied by the district in about 1917. The district area was formerly a part of the old Foothill Irrigation District, which was dissolved in 1933 as a result of a court order which prevented it from obtaining a water supply from the Kings River. By 1924, the irrigated area had

increased to about 1,100 acres. However, from that time until 1935, there was a decrease in the irrigated area, since which time a steady increase in irrigation has taken place. The important crops in the district area from 1917 to 1949 have been grapes, deciduous fruits, olives and citrus. Citrus occupied the largest area until 1949, when the cotton acreage became the greatest.

Description of District

The district is located in the so-called thermal-belt zone, between the Friant-Kern Canal and the Alta Canal of the Alta Irrigation District, and is situated on the old alluvial interfan piedmont between the Kaweah and Kings River alluvial fans. Slopes within the district are generally to the southwest, varying from 35 feet per mile on the east side to less than 10 feet per mile on the western edge. Elevations vary from 550 feet in the northeast portion to 350 feet in the southwest portion. The district consists chiefly of rolling terraced land with hardpan soils and smooth lands with adobe clay soils. Less extensive areas consist of alkali lands in the southwest part of the district, recent alluvial fans in the northeast portion, and small tracts of foothill land along the eastern boundary.

The gross area of the district is 4,927 acres, excluding the Friant-Kern Canal right of way of 91 acres. The lands have been classified by the U. S. Bureau of Reclamation as follows:

Land classification	Gross acreage	Percent of total
1	90	1.8
2	4,189	85.0
3	574	11.7
4	10	0.2
6	64	1.3
Totals	4,927	100.0

The ultimate net irrigable area is estimated at 4,500 acres.

The area irrigated in the district in the season of 1947 was 997 acres, with the following crop pattern:

Crop	Acreage
Alfalfa	37
Irrigated pasture	129
Cotton	169
Grain and grain hay	58
Truck crops	40
Grapes	99
Deciduous (includes nuts and olives)	108
Citrus	352
Field crops	5
Total	997

By 1949 the irrigated acreage had increased to 1,740 acres.

In 1946 it was reported that there were about 60 land ownerships in the district, of which 60 were individual parcels amounting to 3,875 acres, or 77 percent of the district's gross area, with the remaining acreage

being owned by two corporations. The total assessed valuation placed on the district lands in 1944 by the district was \$570,661.

There are no towns or settlements within the district. Adequate transportation facilities serve the area.

Water Supply

The local water supply of the Stone Corral Irrigation District is derived from rainfall, foothill drainage, and some ground water inflow from Alta Canal on the west and from Cottonwood Creek to the south. Average precipitation over the district is nearly 14 inches annually. The district receives some runoff from about seven square miles of foothill drainage area to the north and east. The average annual runoff is estimated at 400 to 500 acre-feet.

The principal ground water supply to the district consists presently of underflow into it from the west and south induced by overdraft within the district and high ground water conditions outside the district. Overdraft has been limited by the depths of alluvial water bearing materials as the depth to granite is less than 100 feet in the greater part of the district. Depths to granite are greatest in the southwestern portion of the district, and it is in this area that present development has centered, indicating that pumping conditions are probably best in this area.

Records of the depth to ground water, which were started by the State in 1921, show that 1935 was the year having the greatest average depth to ground water. During the period 1921-1935 the average depth to ground water lowered from 25 feet to 73 feet, a total lowering of 48 feet, or an average annual lowering of 3.2 feet. The ground water level raised to an average depth of 26 feet in 1942, then dropped to an average depth of 44 feet by the fall of 1948. At present the ground water storage is being depleted rapidly, mainly because of the increase irrigated acreage. In order to remedy this situation, and to carry out the primary purpose of its formation, the irrigation district, with the approval of the California Districts Securities Commission, executed a contract with the U. S. Bureau of Reclamation on December 13, 1950. This contract specifies that the district would receive an annual supplemental supply of 7,700 acre-feet of Class 1 water, and no Class 2 water, from the Friant-Kern Canal. The supplemental water supply would be in addition to about 2,500 acre-feet obtained from deep percolation into the district and an estimated seepage of about 2,400 acre-feet from the Friant-Kern Canal into the area. The foregoing contract also provides for construction of a distribution system to serve the district lands which, based upon 1950 prices, was estimated to cost \$777,000.

DISTRICTS DISSOLVED

Among the irrigation districts that have been formed in California several have become inactive or defunct. Dissolution of such districts may be accomplished by either voluntary or involuntary procedure. Chapters 4 and 5 of Part 11 of Division 11 of the State Water Code recite the procedures necessary to carry out voluntary and involuntary dissolution.

With respect to voluntary dissolution, among other things that are required, are that a majority of owners of land who also own a majority in assessed value of the land in the district may file a petition requesting dissolution with its board of directors. Upon filing of such a petition the board shall call a dissolution election. If two-thirds of the votes cast are in favor of dissolution, the district then may file a petition with the superior court of the principal county requesting dissolution. The court thereupon shall conduct hearings and after all of the assets have been disposed of and all of the liabilities discharged, the court shall enter a final decree declaring the district to be dissolved.

With respect to involuntary dissolution, an action in the superior court of the county may be brought by the Attorney General in the name of the people of the State for the dissolution of an inactive district. Before trial, the court may direct the State Engineer to make an investigation and report such facts as are deemed pertinent or which may be necessary to enable the court to determine the question of dissolution. After the court has given the final judgment of dissolution the county board of supervisors shall perform the duties of the district board of directors and the appropriate county officers shall proceed to levy and collect taxes for payment of any remaining outstanding indebtedness. Any surplus funds shall be apportioned and paid to payers of the last equalized assessment of the district.

Oftentimes it is difficult to obtain accurate information regarding the status of defunct districts after the lapse of a number of years. Some may have cleared up their debts and voted to dissolve, but failed to carry the action to conclusion. Others may have been dissolved but actual proof as to date and record of the matter are not readily available. The records of the Division of Water Resources indicate that eight irrigation districts were dissolved during the period, 1944-50, as follows:

Baker Irrigation District
Dry Creek Irrigation District
Feather River Irrigation District
Fullerton Irrigation District

Lakeland Irrigation District
Red Rock Creek Irrigation District
South Capay Irrigation District
Southern Lassen Irrigation District

There follow brief histories of these districts up to the time of their dissolution. Further information may be found in Bulletin No. 21, "Irrigation Districts in California," 1929, published by the Department of Public Works, Division of Engineering and Irrigation.

Baker Irrigation District

Location: About 2 miles south of Butte City, in Glenn County.
Date of Organization Election: March 31, 1922.
Date of Dissolution Decree: December 12, 1946.
Gross Area: 910 acres.

The district was formed for the primary purpose of purchasing a pumping plant which boosted water from the Sacramento River and a ditch system which served the rice lands of the area. Approval of the State Engineer was given, and the organization election carried by a vote of 9 to 2. The proposed cost of acquisition was \$29,000. Interest in the project soon ceased and the proposed acquisition was not consummated. No work was done, no bonds were issued, and no assessments were levied. At the time of dissolution, there were no assets or liabilities.

The Attorney General, upon recommendation of the California Districts Securities Commission, requested the Superior Court of Glenn County to order the district dissolved. The court so ordered on December 12, 1946, Case No. 6713.

Dry Creek Irrigation District

Location: 3 miles northeast of Wheatland, in Yuba County.
Date of Organization Election: March 1, 1926.
Date of Dissolution Decree: December 12, 1946.
Gross Area: 9,436 acres.

The district was organized, without approval of the State Engineer, for the purpose of developing the water resources of Dry Creek for irrigation use and to purchase water from the Excelsior Water and Power Company. Prior to formation of the district an application to appropriate unappropriated water was filed with the State Division of Water Resources. A permit was issued but later was revoked in 1928.

The district has not been active. No property was acquired by it and at the time of dissolution it had no assets or liabilities.

The Attorney General, upon recommendation of the California Districts Securities Commission, requested the Superior Court of Yuba County to order the district dissolved. The court so ordered on December 12, 1946, Case No. 8820.

Feather River Irrigation District

Location: Between Nicolaus and Verona, in Sutter County.

Date of Organization Election: August 10, 1920.

Date of Dissolution Decree: October 17, 1947.

Gross Area: 3,140 acres.

The district was organized, with approval of the State Engineer, to pump irrigation water from the Feather River to provide a supplemental supply to irrigated lands. An engineering report was prepared and it was proposed to issue bonds in the amount of \$95,000 to carry out the plan. The Bond Certification Commission approved the proposed issue, but it was defeated at an election held in 1921. The district then levied an assessment to cover district and engineering costs. It had been inactive since that time.

The Attorney General, upon recommendation of the California Districts Securities Commission, requested the Superior Court of Sutter County to order the district dissolved. The court found, among other things, that the district had no liabilities but that there were cash assets of \$738, which, being unclaimed for 20 years, had been transferred to the State Treasurer in early 1947. On October 17, 1947, the court ordered the district dissolved, Case No. 5803.

Fullerton Irrigation District

Location: Northwest of Fullerton, in Orange County.

Date of Organization Election: October 28, 1919.

Date of Dissolution Decree: February 14, 1946.

Gross Area: 2,700 acres.

The district, comprising only the Bastancherry Ranch, was organized by the heirs of the Bastancherry Estate for the purpose of acquiring from the ranch, water rights, rights of way and an irrigation system. It was proposed to issue \$700,000 in bonds to purchase the works. The State Engineer was asked to investigate the proposal in 1920, but, before a report could be given, changes in plans for development and operation of the ranch caused the heirs to abandon all plans for operating under a district form of organization.

No assessments had been levied and there were no district assets or liabilities in 1920, or at the time of

dissolution. The Attorney General, upon request of the California Districts Securities Commission, filed a request with the Superior Court of Orange County to order the district dissolved. In Case No. 41607, dated February 14, 1946, the court so ordered.

Lakeland Irrigation District

Location: Southwest of Coreoran, in Kings County.

Date of Organization Election: February 2, 1923.

Date of Dissolution Decree: September 18, 1944.

Gross Area: 23,282 acres.

The district occupied the southeastern portion of the old Tulare Lake bed. The principal objective of formation was participation in the proposed Pine Flat development on the Kings River which project did not materialize during the life of the district. In 1921, a petition for district formation was reported on unfavorably by the State Engineer because of an insufficient water supply. A second petition, presented in 1922, was approved by the State Engineer on the basis of riparian rights on Tulare Lake.

The district acquired stock in the Peoples Ditch Co. which gave it a partial water supply. The district also acquired rights to a water supply in the old Lakeland Canal through lease arrangements. Properties were also obtained through lease agreements. Further district activity declined to the point that no assessments were levied from 1930 to the date of dissolution.

Several reclamation districts were included within the district boundaries. However, the district itself was also included within the larger Tulare Lake Basin Water Storage District which was organized on September 10, 1926.

Dissolution proceedings were filed by the Attorney General's office and the district was dissolved by the Superior Court of Kings County on September 18, 1944, Case No. 8666. From the sale of assets, consisting principally of the Bayou Vista Ditch property and United States securities, the net sum of \$32,031.95 was distributed to the payers of assessment No. 7 which had been paid in 1930.

Red Rock Creek Irrigation District

Location: 12 miles east of Ravendale, in Lassen County.

Date of Organization Election: June 1, 1918.

Date of Dissolution Decree: April 20, 1949.

Gross Area: 11,844 acres.

The formation of this district resulted from the second effort to develop an irrigation project in the Madeline Plains area. The district was organized without approval of the State Engineer. Three attempts

were made to issue bonds for use in developmental purposes but the first two proposals were not approved by the Bond Certification Commission, and, in the third attempt, no offers were received to purchase the bonds which had been certified by the commission.

Water right applications were filed on Red Rock and Cold Springs Creeks but were later canceled by the State Division of Water Resources because of failure to develop the proposed plans.

Several small assessments were levied during the first few years after the district was organized, and \$14,000 in warrants were issued to pay for various promotional expenses. Since that time the district had been inactive.

At the request of the California Districts Securities Commission the Attorney General filed a request with the Superior Court of Lassen County to order the district dissolved. The court found that the district had failed and neglected to secure an adequate water supply, that no works were constructed, that the district had no assets and no liabilities and declared the district dissolved in a judgment by default, Case No. 6693, dated April 20, 1949.

South Capay Irrigation District

Location :	About 6 miles southwest of Hamilton City, in Glenn County.
Date of Organization Election :	November 22, 1921.
Date of Dissolution Decree :	December 12, 1946.
Gross Area :	1,486 acres.

Prior to organization of the district, private interests had installed 15 deep wells on the project, and had contracted for the sale of most of the land to colonists. The district proponents desired to transfer the cost of the irrigation system to an irrigation district by issuing \$88,300 in bonds to purchase the wells, easements, equipment, and water rights. The Bond Certification Commission, upon recommendation of the State Engineer, denied approval of the plan. From that time on the district had been inactive. No assessments were ever levied and no bonds had been issued.

The Attorney General, upon recommendation of the California Districts Securities Commission, requested the Superior Court of Glenn County to order the district dissolved. The court found that the district had failed to secure an adequate water supply, that no works were constructed and that there existed no assets or liabilities, and declared, in Case No. 6714, dated December 12, 1946, that the district was dissolved.

Southern Lassen Irrigation District

Location :	Southeastern portion of Honey Lake Valley, in Lassen County.
Date of Organization Election :	December 24, 1915.
Date of Dissolution Decree :	April 20, 1949.
Gross Area :	22,565 acres.

The district was the only remaining one of three irrigation districts formed in Honey Lake Valley, the other two having been previously dissolved by the Superior Court on suit filed by the Attorney General.

In 1917 an engineering report was prepared which proposed obtaining water from Last Chance Creek and the construction of a reservoir and distribution system. The full development was estimated to cost \$1,400,000. The Bond Certification Commission, upon recommendation of the State Engineer, reported unfavorably upon the proposal principally because the available water supply was believed to be inadequate. No further progress was made and the district's water right applications were cancelled in 1922. Several assessments were levied which resulted in large delinquencies.

The Attorney General, upon recommendation of the California Districts Securities Commission, filed complaint with the Superior Court of Lassen County to order the district dissolved. The court found that the district had failed to secure an adequate water supply that no works were constructed and that there existed no assets nor liabilities, and declared, in a judgment by default, Case No. 6677, dated April 20, 1949, that the district was dissolved.

ACTIVITIES OF THE CALIFORNIA DISTRICTS SECURITIES COMMISSION AND STATE ENGINEER WITH REFERENCE TO PUBLIC WATER DISTRICTS

During the period 1947-50, there have come before the California Districts Securities Commission for approval, contracts between the United States and a number of districts for water supplies from federal projects, for construction of distribution systems by the United States within the districts, or both a water supply and a distribution system. In some cases, approval of such contracts by the commission is a prerequisite by law, while in others the commission's action is advisory only. In all cases, investigations have been made by the State Engineer, and his findings and recommendations presented to the commission for action thereon.

In view of this intensified contract activity and interest therein, there is set forth a statement with reference to functions of the commission and State Engineer, as they relate to public water districts.

Functions of Districts Securities Commission

The California Districts Securities Commission, organized by act of the Legislature June 19, 1931, is charged with the direction and supervision of the fiscal and physical affairs of irrigation and certain other agencies organized under the laws of the State. The chief statutory functions of the commission are listed as follows:

- (1) To investigate and report upon the sufficiency of water supply, fertility of soil, feasibility of proposed works and economic soundness of a project for which district or other agency bonds are to be issued and to recommend modification of project if deemed proper;
- (2) To investigate, and if approved, report bonds issued by such districts or agencies to the State Controller for certification as being legal investments, for funds of banks, insurance companies and trust companies, trust funds and any funds for which the bonds of states, counties and other political subdivisions are legal investments;
- (3) To investigate and pass upon all expenditures from the proceeds of the sale of such district or agency bonds;
- (4) To investigate and pass upon all contracts entered into by irrigation districts involving annual expenditures exceeding minimum amounts;

- (5) To investigate and pass upon all contracts for lease or sale of surplus water by irrigation districts;
- (6) To examine books and affairs of irrigation and certain other districts and agencies, and maintain records of the physical and financial conditions of such districts;
- (7) To act for irrigation districts in negotiating with holders of bonds or warrants for the purpose of compromise of indebtedness when adjustment of same is deemed necessary;
- (8) To investigate and report upon proposed refunding of bonded indebtedness of irrigation districts and pass upon the issuance of refunding bonds;
- (9) To investigate the formation of bondholders' committees and, if approved, grant permits for issuance of certificates of deposit for bonds authorized by the commission for certification by the State Controller;
- (10) To investigate proposals to waive the Statute of Limitations with reference to the payment of matured bonds and warrants, bond and warrant interest, and pass upon agreements extending the time of payment of such obligations;
- (11) To pass upon the allocation of irrigation district revenues for amortization of specific issues of irrigation district bonds or the creation of reserve funds.
- (12) To approve the purposes of proposed district projects and the issuance of warrants payable at future dates to defray the cost thereof;
- (13) To examine and report upon all contracts between the United States and irrigation and certain other districts involving the cost of the acquisition of any property and/or the repayment of construction costs; and
- (14) To approve and certify as legal investment for funds of banks, insurance companies, etc., pursuant to the provisions of Sections 54433-54434 of the "Sanitation, Sewer and Water Revenue Bond Law of 1941."

Certain functions of the commission apply among others to water storage districts, water conservation districts, county water districts, county water works

districts, public utility districts, reclamation districts and drainage districts and if the bonds of such districts are certified pursuant to the provisions of the Districts Securities Commission Act, then such districts remain subject to such commission control as is provided by law.

In addition to the major functions noted above, approval of the commission is required of specific district operations and transactions by virtue of the wording of many of the resolutions authorizing the issuance of bonds and warrants.

The commission is composed of five members: The State Superintendent of Banks, Attorney General, State Engineer, and two district officials appointed by the Governor. The commission was the outgrowth of a special legislative investigation conducted in 1929 and 1930, during that period of financial stress. Since its organization in 1931 the issuance of bonds and execution of contracts, exclusive of those between the districts and the United States, by agencies under commission jurisdiction, has involved capital amounts in excess of \$125,000,000, upon which there has been no instance of default in the payment of principal and/or interest when due.

Since 1934, the date the commission reported upon the first contract between the United States and a public district, it had, up to the end of 1950, upon request of districts involved, reported upon some 13 proposed contracts between them and the United States providing for either water service or construction of distribution systems, or both. In reporting upon the engineering, economic and financial feasibility of such contracts the commission has been concerned with the manner of its approach to features of such contracts deemed questionable from a legal standpoint. Although it has always been the opinion of the commission that it is a fact-finding body with no authorized judicial functions, its powers would appear to include authority to comment, in appropriate instances, regarding the public interest and the possible effect of a contract or proposal adverse to such interest, or to make reference to other matters deemed appropriate.

Functions of State Engineer

The State Engineer is charged by law with the duty of assisting in the formation and investigation and approval of the organization of certain types of districts, the primary purposes of which are the conservation of water and the irrigation of land. A summarized statement of these duties follows:

- (1) Under provisions of Division 11 of the Water Code the Department of Public Works acting through the State Engineer is directed to give information so far as it may be practicable to

persons contemplating the formation of irrigation districts.

- (2) The State Engineer is also required to investigate and report in writing upon the feasibility of proposed irrigation districts through the provision of law which requires the board of supervisors to whom the organization petition is presented to refer the proposal to the Department of Public Works for investigation and report.
- (3) Pending the completion of preliminary surveys and investigations the State Engineer as Chief of the Division of Water Resources may withhold from appropriation any unappropriated water likely to be needed by a district project.
- (4) The State Engineer may at any time make an examination of the affairs of any irrigation district or call upon the authorities of the district for any information he desires and make any report thereon he deems advisable.
- (5) Under Division 12 of the Water Code the State Engineer is required to investigate and report upon any proposal to consolidate two or more county water districts, recommending final boundaries, and apportioning any outstanding indebtedness as he deems equitable.
- (6) Division 14 of the Water Code relating to water storage districts imposes upon the Department of Public Works, acting through the State Engineer, numerous duties in connection with the investigation, organization, approval of plans, levy of assessments, and construction of works by these districts.
- (7) In addition to miscellaneous statutory duties imposed upon him by various other district acts, the State Engineer under Division 10 of the Water Code is required on behalf of the California Districts Securities Commission:
 - (a) To make inspections from time to time of the progress of any work to be paid for from the proceeds of certified bond issues and report thereon to the commission.
 - (b) To approve any deviation from plans and expenditure schedules previously approved by the commission if in his judgment such deviation is reasonable and proper.
 - (c) To make written reports to the commission upon completion of any work to his satisfaction, submitting therein a schedule of expenditures as actually made from the proceeds of the certified bond issues.

It has been the practice of the California Districts Securities Commission to refer all applications to the

State Engineer for investigation and report which cover water supply and engineering and economic feasibility for consideration of and action upon by the commission.

Table A, which follows, shows a list of public water districts that have executed contracts with the United States which had been passed upon by the commission in the period ending December, 1950.

STATISTICAL INFORMATION FOR THE PERIOD 1944-1950

Annual reports giving the results of their operations were received during the period 1944-1950 from about 95 of the 108 organized districts. Nine irrigation districts were formed and eight were dissolved during the period. Five districts which were in default prior to 1945 continued to remain in that status.

Most of the districts appreciably improved their financial position during the period. Cash reserves were built up and bond obligations, almost without exception, were either paid in advance or when due. During the first half of the period outlays for replacements and improvements were held to a minimum in deference to the war effort, whereas, during the latter half of the period, when labor and material became more plentiful and the increases in farm prices and population resulted in increases in demand for water services, expansion and replacement activities became greatly accelerated.

During most of this period there were a number of districts located along the Friant-Kern Canal of the Central Valley Project which were relatively inactive until such time as the canal could commence delivery of water. By 1950, a sufficient portion of the canal had been completed so that most of these formerly inactive districts commenced diverting water from it. Other areas in the vicinity were organized during this period in order to be in a position to contract for Central Valley Project water when it became available.

Outstanding things shown by the irrigation district's reports during the seven-year period include the following: a continued increase in the number of pumping plants installed, an increase in acreage of clover and irrigated pasture, improvement in financial solvency, completion of bond refunding programs, and increasing income received from water sales as contrasted with the relatively stable income received from assessments.

Several comments are hereinafter presented with respect to the statistical tables which follow in order to facilitate interpretation of the data and to report a few changes made in presenting the data.

Sources of Water Supply, Storage and Distribution

Table I for the year 1949 shows for the first time in the column entitled "Sources of Water Supply," those districts which commenced diversion of water from the Friant-Kern Canal of the Central Valley Project.

Inasmuch as the annual questionnaires sent to the districts by the California Districts Securities Commis-

sion request information showing the "Total Horsepower Used," the column entitled "Installed Horsepower" was changed in the 1949 and 1950 tables to "Installed Horsepower Used." Presumably such amounts would be smaller than those indicating total installed horsepower.

Data showing "Water Diverted in Acre-Feet" is believed to be more reliable than those showing "Water Reported Delivered in Acre-Feet." The latter is more difficult to measure, the uses are varied and mixed in numerous instances, and "Water Lost or Spilled" is believed to occur in many more instances than is indicated in the tables.

Irrigation District Crop Reports

In Table II for the years 1949 and 1950, acreages of clover and pasture were consolidated into one column inasmuch as an element of ambiguity was developed as to whether irrigated pasture, which contains clover, should be reported as "Clover" or "Pasture." Henceforth, acreages in clover grown for seed purposes and a cash crop will be included in the column "Other Field Crops." Irrigated native pasture constitutes only a small percent of the total pasture acreage and therefore is not segregated.

Not too much reliance should be placed in the data indicating the total acreage that was "Dry Farmed" inasmuch as some of the detailed acreage data reports included dry land that was not cultivated, such as old or native pasture land.

Summary of Assessments Levied

A comparison of 1950-51 assessment rates per \$100 of valuation with those for 1944-45 indicates an appreciable increase in such rates. The relatively healthy financial condition of the districts is indicated by comparing data shown in Table III for the last few years with those of any of the prior years. Further examination will indicate the low rate of delinquent assessments, and the small amount of tax sale certificates and the low acreage in tax delinquent lands currently held by the districts. Redemptions are taking place under favorable conditions and tax delinquent lands are being restored to the assessment rolls.

Annual Financial Reports

Cash balances, the sources of receipts, and purposes of disbursements are reported in Table IV. Inasmuch

the accounting procedure followed by the districts is not uniform, an accurate analysis of such data is precluded. However, an attempt has been made to present the figures reported in the annual statements in such a manner as to facilitate comparison of district operations from year to year. During the period of World War II, deferred construction and replacement projects resulted in increasing cash balances, a portion of which was invested in United States securities and other investment funds. Therefore, commencing with the 1947 table, a separate column was added to show these "Other Funds and Securities Held" which are in addition to the year end cash balances reported.

A comparison of receipts from assessments and from water sales indicates that over a period of years the income from water sales has increased until by 1946 it about equaled the income from assessments. Since that time annual revenues from water sales have been appreciably larger than from assessment revenues.

Strict comparisons of disbursements for administration with those for operation and maintenance should not be made in some instances inasmuch as a number of districts did not report such expenditures in sufficient detail to make such comparisons.

Bonds and Warrants Outstanding

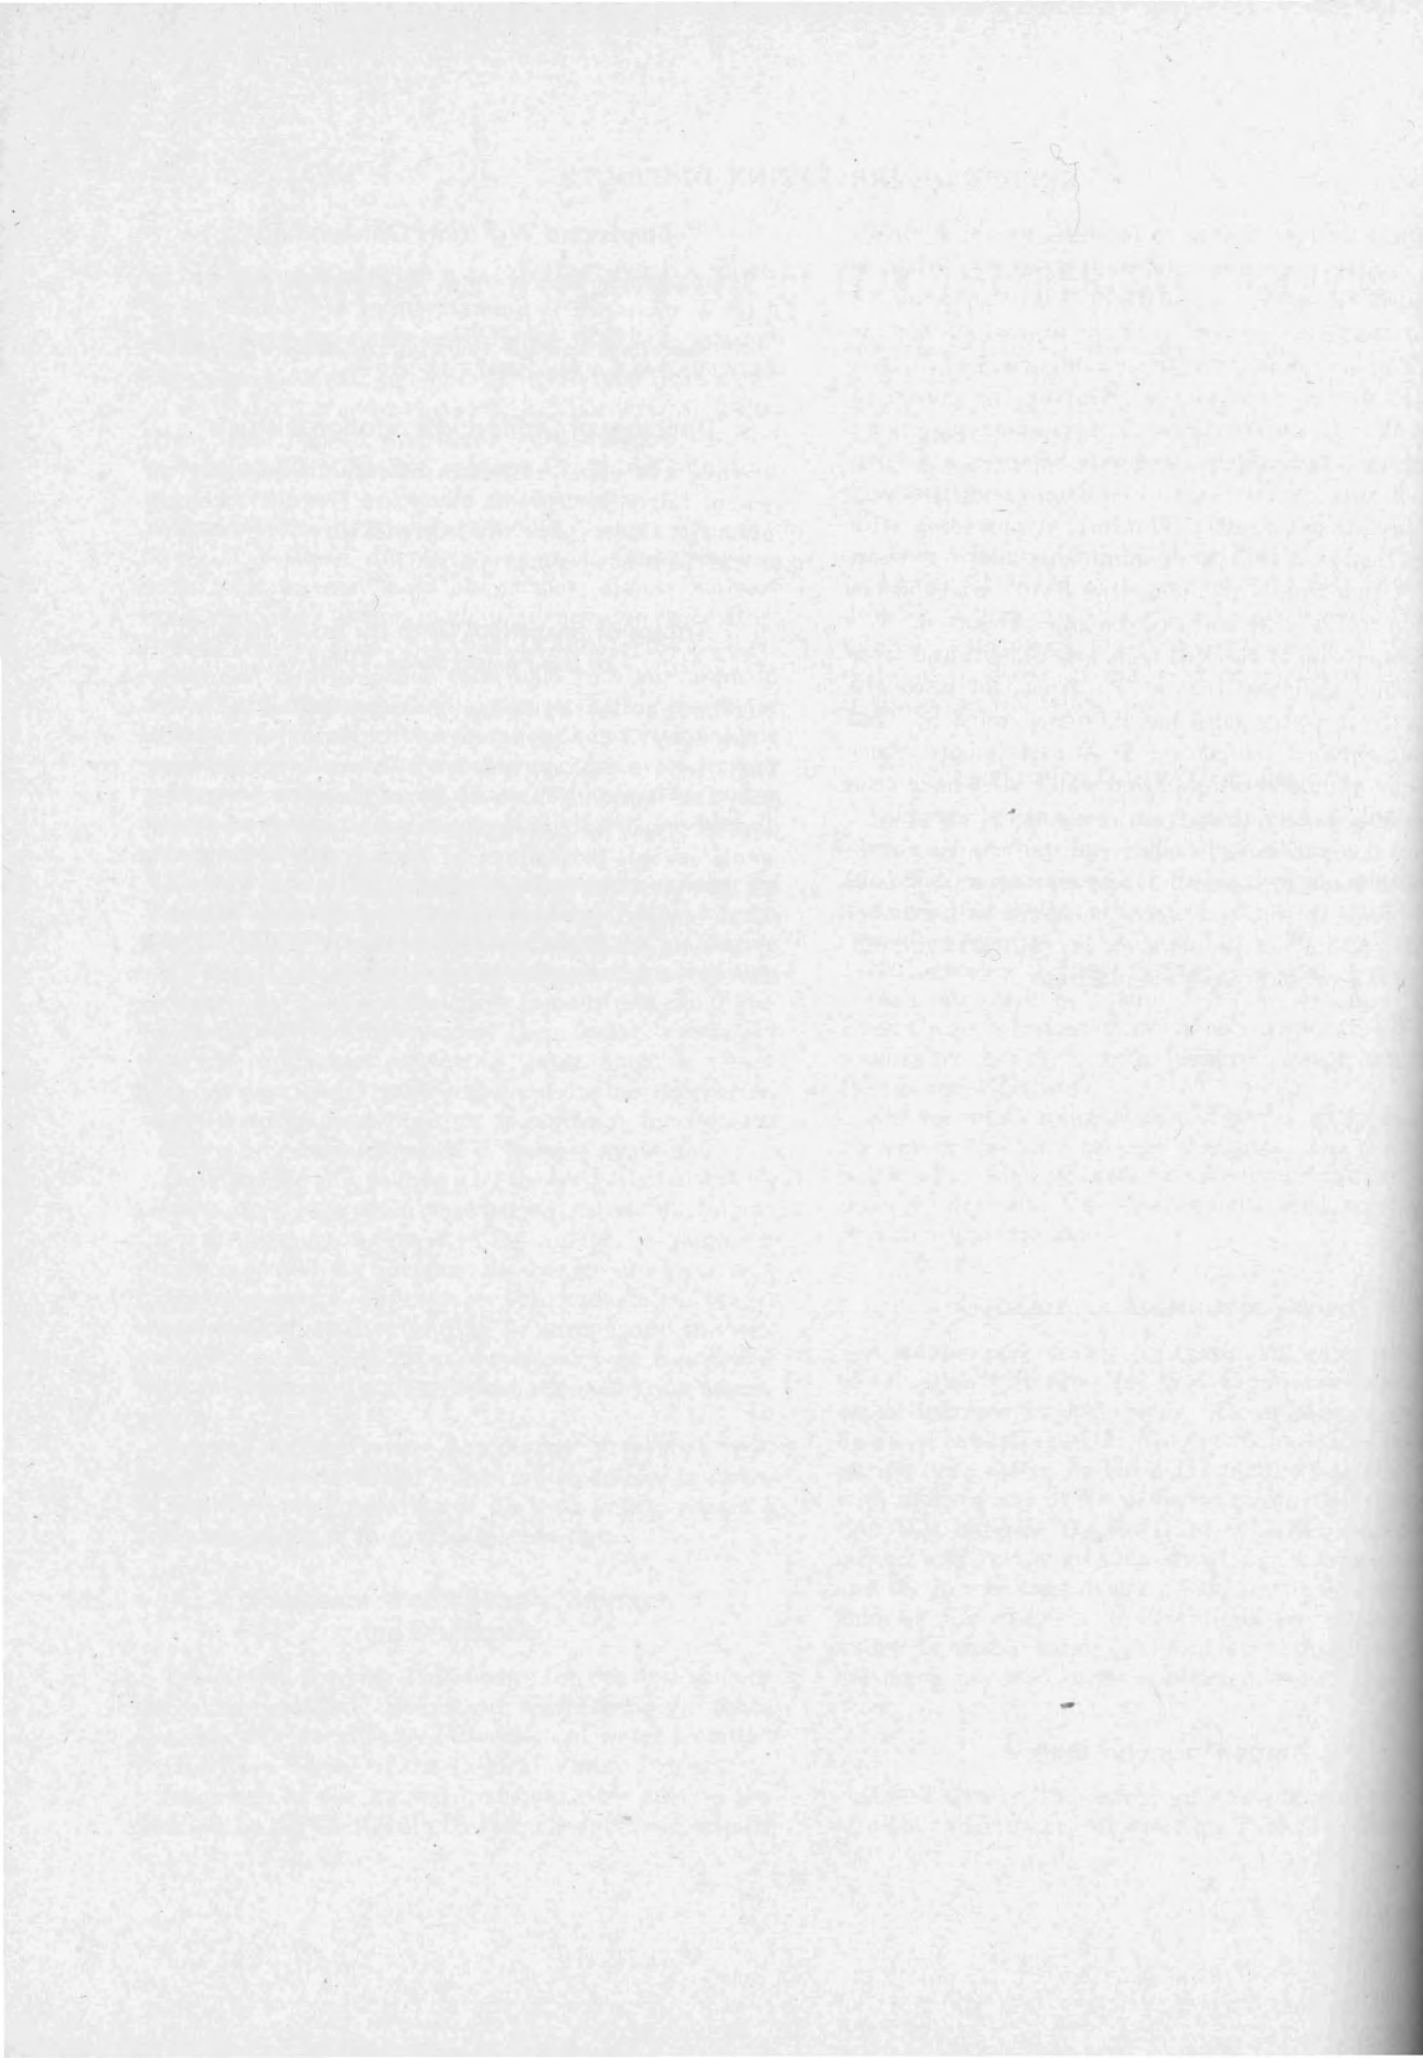

Total outstanding bonded indebtedness shown in Table V increased to a maximum of \$74,453,368 as of January 15, 1950, which was somewhat higher than that reported for any year since 1940.

Directory of California Irrigation Districts

While the office addresses of established districts remain fairly permanent, there are frequent changes in district officers. For this reason a directory for each of the years has been prepared.

Tables of Statistical Data for Each Year of the Period 1944-1950

Irrigation district statistics are presented in Tables I through VI for each year of the period 1944-1950. Table I gives data on source of water supply, storage, and distribution. Table II gives data on irrigation district crops. Table III presents a summary of assessments levied, percentage of assessments delinquent, tax sale certificates and tax-deeded lands. Table IV shows annual receipts and disbursements. Table V gives data on bonds and warrants, and Table VI is a directory of irrigation districts.

-----------------------	--------	--------------	-------------------	---	----------------	-------	----------------	----------------	-------------	-------------	--------------	-------------	-------------	-------------	--------------

(a) Alta has outstanding one \$500 bond not presented for payment.

(b) Corcoran holds \$70,500 of its own bonds purchased as investment.

(c) Cordus has outstanding \$1,000 bond not presented for payment.

(d) El Nido reduced interest rate on bonds from 6 to 4 1/2 from July 1 1939, through private agreement with bondholders.

(e) Imperial bonds and coupons not presented for payment.

(f) La Mesa has outstanding bond coupons of \$810 not presented for payment.

(g) Maxwell bondowners acquired all outstanding bonds and warrants which are held in escrow pursuant to agreement.

(h) Merced bonds and coupons not presented for payment.

(i) Modesto bonds and coupons not presented for payment.

(j) Mortgage bonded indebtedness is being liquidated as per decree of U.S. District Court (Case 10503 Mar. 4, 1944.)

(k) Paradise refunding bonds will be issued following settlement of suit over \$29,000 in bonds of dissenters.

(l) Provident has outstanding \$21,000 of original bonds not presented for refunding.

(m) South San Joaquin issued Second Refunding Bonds and paid off debt to R.F.C. Holdout bonds of old issues are still in litigation.

(n) Table Mountain bonds are all held by one of the banks. District is inactive.

(o) Tule and Baxter Creek bonds are in process of liquidation.

(p) Turlock bonds and coupons not presented for payment.

(q) Waterford holds uncanceled \$19,000 of its outstanding bonds.

(r) West Stanislaus bonds not presented for payment.

TABLE VI
 DIRECTORY OF CALIFORNIA IRRIGATION DISTRICTS

For the Year 1944

Name of District	County	Estimated Population			District Officers				District Office Address
		Inside Cities and Towns	Outside Cities and Towns	Total	President	Secretary	Attorneys	Manager or Engineer	
Alpough	Tulare		600	600	Homer Mitchell	Winifred Sonke	Leroy McCormick	P.S. Calkins	Alpough, California
Alta	Tulare, Fresno, Kings	10,000	7,000	17,000	Walter Billingslea	E. Sibley	McPadreen and Crowe	E. Sibley	Mirabe, 289 North L Street

- * Where no reports were made, the disbursement figures given are merely the difference in cash on hand at the beginning and end of year.
- (a) Alpaugh Cash Balance excludes holdings of U. S. securities which are sufficient to redeem funded debt when due.
 - (b) Alta Cash Balance excludes \$90,000 in U. S. securities.
 - (c) Browns Valley Cash Balance excludes \$160,000 invested in U. S. securities.
 - (d) Carpenter Cash Balance excludes \$17,020 in U. S. securities.
 - (e) Consolidated's statement is for the period August 1, 1944, to July 31, 1945.
 - (f) East Contra Costa Cash Balance excludes \$170,000 invested in U. S. securities.
 - (g) El Dorado has \$20,000 invested in U. S. securities in addition to Cash Balance shown.
 - (h) Empire Cash Balance excludes \$5,000 in U. S. securities.
 - (i) La Canada Cash Balance excludes securities investments of \$90,590, of which \$82,200 are in U. S. Bonds and the balance in La Canada I. D. Bonds.
 - (j) La Mesa, Lemon Grove and S.V. has in addition \$550,000 in U. S. securities.
 - (k) Lindmore Cash Balance excludes \$10,000 invested in U. S. securities.
 - (l) Madera also has \$212,600 in U. S. securities.
 - (m) Merced Cash Balance excludes \$1,600,000 invested in U. S. securities.
 - (n) Modesto Cash Balance excludes \$600,000 invested in U. S. securities.
 - (o) Oakdale Cash Balance excludes \$153,000 invested in U. S. securities.
 - (p) San Dieguito Cash Balance excludes \$45,000 invested in U. S. securities.
 - (q) Santa Fe Cash Balance excludes \$64,000 in U. S. securities.
 - (r) South Montebello holds, in addition, \$5,500 in U. S. securities.
 - (s) Turlock has, in addition, the following investments: T.I.D. Bonds, \$12,948; Impr. Dist. Warrants, \$307,661; U. S. securities, \$402,585. Miscellaneous Disbursements include \$909,545 for Operation and Maintenance and Capital Expenditure.
 - (t) Waterford has, in addition, \$45,000 in U. S. securities.
 - (u) West Stanislaus has, in addition, \$90,000 in U. S. securities.

TABLE V
SUMMARY OF DATA RELATING TO BONDS AND WARRANTS OF CALIFORNIA IRRIGATION DISTRICTS (Continued)
For the Year 1945

Totals for each district are underscored

- (a) Alpaugh cash on hand excludes holdings of U. S. bonds which are sufficient to redeem funded debt when due.
- (b) Alta cash excludes \$37,000 in U. S. Bonds.
- (c) Anderson-Cottonwood Miscellaneous Disbursements are unidentified expenditures up to August 1, 1946.
- (d) Brown Valley Cash Balance excludes \$160,000 in U. S. securities.
- (e) Carpenter Cash Balance excludes \$17,000 in U. S. securities.
- (f) Consolidated's statement is for the period August 1, 1945, to July 31, 1946.
- (g) East Contra Costa Cash Balance excludes \$220,000 invested in U. S. securities.
- (h) Empire West Side Cash Balance excludes \$5,000 invested in U. S. securities.
- (i) Imperial Irrigation District Miscellaneous Income includes income received from sale of Electric Revenue Bonds in the amount of \$6,200,000.
- (j) La Canada Cash Balance excludes investments of \$61,700 in U. S. Bonds and \$17,000 in uncancelled outstanding district bonds.
- (k) La Mesa, Lemon Grove and S. V. has in addition \$550,000 in U. S. securities.
- (l) Lindmore Cash Balance excludes \$10,000 invested in U. S. securities.
- (m) Madera Cash Balance excludes \$212,785 invested in U. S. securities.
- (n) Merced Cash Balance excludes \$1,700,000 invested in U. S. securities.
- (o) Modesto Cash Balance excludes \$400,000 held in U. S. securities.
- (p) Oakdale Cash Balance excludes \$113,000 invested in U. S. securities.
- (q) Orange Cove Miscellaneous Receipts include \$12,264 excess collections to be refunded.
- (r) Palo Verde miscellaneous columns include \$70,000 paid on a \$100,000 note issued earlier in the year.
- (s) Princeton-Cordova-Glenn Cash Balance excludes \$6,000 in U. S. securities and \$18,000 (face value) in district's own outstanding bonds.
- (t) Provident Miscellaneous Disbursements includes payment of refinancing loan, \$183,837.00, and payment of refinancing interest, \$3,017.00.
- (u) Santa Fe Cash Balance excludes \$59,000 in U. S. securities.
- (v) South Montebello holds in addition \$5,500 in U. S. securities.
- (w) Stratford Miscellaneous Disbursements represents paid off warrants.
- (x) Turlock Cash Balance excludes T.I.D. Bonds, \$6,592; Improvement District Bonds, \$46,613; U. S. securities, \$202,466. Miscellaneous Disbursements include \$1,350,687 for operation and maintenance and capital investment.
- (y) Vista financial report excludes Henshaw Dam purchase June 14, 1946.
- (z) West Side has in addition \$25,000 in U. S. securities.
- (§) West Stanislaus has in addition \$50,000 in U. S. securities.

Water Storage District

Buena Vista	Kern R. (Buena Vista Lake)	---	---	7	8	E.G.	215	232,329	40,227	0	---	5,313	52,522	57,835	56,345	---	1,490	---	1.4
-------------	----------------------------	-----	-----	---	---	------	-----	---------	--------	---	-----	-------	--------	--------	--------	-----	-------	-----	-----

(a) Cordua's delivery of 12,056 acre-feet of water includes that used for gun clubs for both inside and outside the district.

(b) Combined capacities of La Mesa's interest in E. Capitan, Cuyamaca and Murray Reservoirs is 22,450 acre-feet.

(c) Water used principally to replenish groundwater supply.

(d) Total Diversion used for gun club lands.

(e) Estimated from best available data.

(f) South Fork's 1946 diversion should have been 10,200 acre-feet instead of 42,000 acre-feet previously reported.

TABLE II
CALIFORNIA IRRIGATION DISTRICT CROP REPORTS FOR 1947

- (a) Double crop acreage is included.
 (b) Double crop acreage is excluded.
 (c) Imperial crop survey is as of March, 1947.
 (d) Irrigated acreage includes 11,000 acres that are considered sub-irrigated.
 (e) Estimated acreage from best available sources.
 (f) U. S. Bureau of Reclamation 1946 crop survey.

TABLE III

SUMMARY OF ASSESSMENTS LEVIED, PERCENTAGES DELINQUENT, TAX SALE CERTIFICATES,
AND TAX DEEDED LANDS IN CALIFORNIA IRRIGATION DISTRICTS

For Calendar Year 1947

Name of District	Assessment 1946-1947					Assessment 1947-1948					Tax Sale Certificates			Tax Delinquent Lands		
	Total Assessed Valuation	Rate per \$100 of Valuation	Total Assessment Levied	Amount Delinquent on Tax Sale Date	Percentage of Assessment Delinquent	Total Assessed Valuation	Rate Per \$100 of Valuation			Total Assessment Levied	Amount Now Held by District	Amount Held Preceding Year	Trend Increase + Decrease -	Acres Held By District Tax Deed	Acres Subject to District Tax Deed	No. Acres Sold in 1947

* When no financial report was rendered the disbursement or receipt figure herein reported is merely the difference in cash balance at the beginning and end of the year.

- (a) Alpaugh Cash Balance excludes \$7,133 held in General Fund for outstanding warrants.
 (b) Beaumont Miscellaneous Receipts includes \$150,000 received from sale of Third Bond Issue.
 (c) Consolidated's fiscal statement is for the period August 1, 1946 to July 31, 1947. Other cash fund balances total \$94,157.

(d) Naglee-Burk purchased \$34,500 of its outstanding bonds.

(e) Estimated from best available information.

(f) Nevada Miscellaneous Receipts include \$868,500 received from sale of 4th issue bonds.

(g) Tulare Cash Balance excludes bonds and stocks held as an investment.

TABLE V
SUMMARY OF DATA RELATING TO BONDS AND WARRANTS OF CALIFORNIA IRRIGATION DISTRICTS
For the Year 1947

Totals for each district are underscored

(a) Double crop acreage is not included.

(b) Double crop acreage is included.

(c) Cordua furnished water for an additional 1,105 acres in gun clubs

(d) Imperial crop survey is as of March, 1948.

(e) Estimated acreage.

(f) 1947 crop report.

(g) Provident furnished water for an additional 4,000 acres in gun clubs

(h) South San Joaquin irrigated area includes 11,000 acres that are considered sub-irrigated.

a Bond principal and interest reported due and unpaid are for bonds that have not been presented for payment.

b Baxter Creek bonds are in process of liquidation according to terms of interlocutory decree entered by the U. S. District Court for Northern California on January 3, 1946.

c Corcoran holds \$80,500 of these outstanding bonds as an investment.

d Maxwell land owners have acquired all outstanding bonds and warrants which are held in escrow pursuant to agreement.

e Montague bonded indebtedness is still in process of liquidation as per decree of U. S. District Court for Northern California, Case #10503, March 4, 1944.

f Naglee-Bark purchased all its outstanding bonds.

g Princeton-Codora-Glenn purchased and holds as an investment \$17,500 of its outstanding bonds.

h South San Joaquin issued 2nd Refunding bonds and paid off debt to R.F.O. Hold out bonds of original issues are still in litigation.

i Terra Bella holds \$24,000 of its outstanding bonds as an investment.

j Tule bonds are in process of liquidation in accordance with interlocutory decree entered by the U. S. District Court for Northern California on January 3, 1946.

k Waterford purchased and holds \$44,000 of its outstanding bonds uncancelled.

- (a) Double cropped acreage is not included.
- (b) Double cropped acreage is included.
- (c) 1948 crop survey.
- (d) 1948 crop survey report was in error.

- (e) Estimated acreage.
- (f) Cordus furnished water for an additional 1,393 acres in gun clubs.
- (g) Glenn-Colusa furnished water for an additional 3,705 acres in duck ponds.
- (h) Imperial crop survey is as of March, 1949.
- (i) South San Joaquin irrigated area includes 11,000 acres that are considered sub-irrigated.

TABLE VI
 DIRECTORY OF CALIFORNIA IRRIGATION DISTRICTS (Continued)

For the Year 1949

Name of District	County	Estimated Population			District Officials				District Office Address
		Inside Cities and Towns	Outside Cities and Towns	Total	President	Secretary	Attorneys	Manager or Engineer	
Merced	Merced	20,000	15,000	35,000	Elmer B. Wood	H. P. Sargent	G. Ray Robinson	Kenneth E. McSwain	Merced, Drawer 759
Modesto	Stanislaus	45,000	30,000	75,000	L. D. Thompson	L. E. Bither	Vernon F. Gant	C. E. Plummer	Modesto, 823 - 11th Street
Mokelumne	San Joaquin	50	100	150	Nell C. Locke	Thos. S. Louttit	Thos. S. Louttit	Lockeford	Lockeford
Montague	Siskiyou	500	200	700	Sidney O'Donner	Orville Abbott	Floyd Merrill	Oroville Abbott	Montague, P. O. Box 247
Naglee-Burk	San Joaquin	200	200	200	Joe Borges	George Wadsworth	George Wadsworth		Tracy, 105-110 Roberts Bldg.
Nevada	Nevada, Placer	10,400	6,600	17,000	Max P. Arnold	Elizabeth P. Frey	P. J. Minasian	Forrest F. Varney	Grass Valley, 144 So. Auburn Street
Newport Heights	Orange	7,400	7,400	14,800	Chas. W. TeWinkle	A. C. Swartz	A. W. Rutan	A. C. Swartz	Costa Mesa, 116 E 18th Street
Newport Mesa	Orange	900	900	1,800	Cuning Butler	D. J. Dodge			Costa Mesa, P. O. Box 305
Oakdale	Stanislaus, San Joaquin	7,000	8,000	15,000	Leroy Smith	C. W. Quinley	P. J. Minasian	R. E. Hartley	Oakdale, P. O. Box 487
Orange Cove	Fresno, Tulare	4,000	500	4,500	M. N. Jensen	A. J. Vortmann	Leroy McCormick	J. F. Sorensen	Orange Cove, Box 308
Oroville-Wyandotte	Butte		3,000	3,000	Stafford Wentworth	H. Marlow	P. J. Minasian	J. E. Alley	Oroville, P. O. Box 308
Palmdale	Los Angeles		1,800	1,800	Straud McBride	C. Owen Moulton	Stewart, Shaw, & Murphy	A. L. Study	Palmdale, P. O. Box 101
Palo Verde	Riverside, Imperial	4,500	6,500	11,000	Horace M. Miller, Jr.	R. G. Eberhart	Stewart, Shaw, & Murphy	C. C. Tabor	Hythe, P. O. Box 38
Paradise	Butte		7,500	7,500	Roy R. Rankin	Lillian Compton	H. S. Clewett	Frank A. Compton	Paradise, Drawer O
Porterville (New)	Tulare		2,500	2,500	Maurice Henderson	Mrs. Virginia K. Falconer	Erling H. Kloster	Henry A. Campbell	Porterville, Rt. 2, Box 76
Potter Valley	Mendocino	165	460	625	L. L. Hughes	L. S. Clark	Charles Kosch	Roy Nelson	Potter Valley
Princeton-Codora-Glenn	Colusa, Glenn	250	750	1,000	Clyde H. Calvert	Clyde H. Larimer	Clyde H. Larimer	Walter B. Grimes	Princeton
Provident	Colusa, Glenn		50	50	Walter Calvert	T. E. Balch	P. J. Minasian	T. E. Balch	Willows, 119 N. Butte Street
Ramona	San Diego	2,000		2,000	Oliver B. Garrett	Lois V. Stevens	W. H. Jennings	Elbert M. Ritchie	Ramona, 567 Main Street
Richvale	Butte	200	100	300	San Lofgren	Alvin L. Harry	P. J. Minasian	Martin Polk	Richvale, P. O. Box 147
Riverdale	Fresno		1,500	1,500	Fred A. Handcock	Tina Z. Cushman	Sidney J. W. Sharp	V. L. Aitken	Riverdale
San Diegoito	San Diego		6,980	6,980	E. A. Batchelor	Frank S. Jacobson	John M. Cranston	Frank S. Jackson	Encinitas, P. O. Box 207
Santa Fe	San Diego		3,000	3,000	M. A. Smart	D. M. Makewell	Ray C. Eberhard	John H. Chase	Rancho Santa Fe
San Ysidro	San Diego	3,100		3,100	C. C. Buehrer	L. Judd	W. H. Jennings	C. F. Riddle	San Ysidro, P. O. Box 5
Saucelito	Tulare		300	300	Ronald Bessey	Daisy J. Hudson	Leroy McCormick	I. H. Althouse	Terra Bella, Rt. 1, Box 225 A
Scott Valley	Siskiyou	20	500	520	Fred H. Williams	Ernest P. Smith	Tebbe & Correia	B. P. Casci	Fort Jones
Serrano	Orange		700	700	Willard Smith	F. H. Collins	Rutan & Tucker		Orange, Rt. 1, 18021 E. Lincoln Street
Shafter-Nasco	Kern	7,000	9,000	16,000	Clarence B. Amin	M. Allen Johnston	Wood Young	Shafter, P. O. Box 127	Shafter, P. O. Box 127
Solano	Solano		75	75	Howard Vaun	Wood Young	Leo Dannel		Fieldfield, 754 Texas Street
South Fork	Modoc		90	90	D. E. Van Loan	C. S. Baldwin			Alturas, Box 205
South Montebello	Los Angeles	4,500		4,500	Floyd N. Haight	Patricia Dee Sinclair	Robert F. Hardesty	Blair J. Glancy	Montebello, 864 W. Washington Blvd.
South San Joaquin	San Joaquin	8,000	13,000	21,000	Ezra Keppel	S. L. Steele	Rutherford, Jacobs, et al.	T. P. Stivers	Manteca, P. O. Box 71
Steel Canyon	San Diego		75	75	Ralph Barger	N. A. McKeel	Allen Mitchell		Spring Valley, Star Route
Stinson	Fresno	10	25	35	Wm. H. Noble	L. M. Gobetta			Burrel
Stone Corral	Tulare		150	150	Gordon H. Garland	John R. Locke, Jr.	John R. Locke, Jr.	Harold Shawl	Visalia, 127 North Church Street
Stratford	Kings		1,500	1,500	Conrad Vierhus	Gloria J. Dufur	Ronald B. Harris		Stratford
Table Mountain	Butte		10	10	Mrs. Margaret B. Chaffin	B. E. Bailey		A. L. Chaffin	Oroville, Rt. 1
Terra Bella	Tulare	800	450	1,250	W. C. Bradford	Ernst H. Thiesse	James E. Abercrombie	I. H. Althouse	Terra Bella, P.O. Box 125
Thermalito	Butte		3,000	3,000	Loy E. Hibbs	Hally Gibson	P. J. Minasian	J. W. McDonald	Oroville, Rt. 3, Box 1052
Tracy Clover	San Joaquin		650	650	C. P. Fuson	George Wadsworth	George Wadsworth		Tracy, 105 Roberts Bldg.
Tranquillity	Fresno	750	750	1,500	Wm. E. Glots	Iva Johnson	Ronald B. Harris	F. E. Miller	Tranquillity
Tulare (Defunct)	Tulare	12,000	5,000	17,000	Harold Swall	David L. Zack	Calvin B. Russell	L. E. Robertson	Tulare, 3324 W. Inyo Street
Turlock	Lassen		100	100			W. Coburn Cook		Turlock, P. O. Box 510
Vandalia	Stanislaus, Merced	14,000	40,000	54,000	A. M. Crowell	R. S. Tillner	W. Coburn Cook	H. V. Meikle	Turlock, 117 W. Main Street
Vista	Tulare		100	100	H. R. Matske	H. C. Pogram	James E. Abercrombie	I. H. Althouse	Forterville, P. O. Box 1026
Walnut	San Diego		8,300	8,300	V. J. Becherer	H. H. Tackey	Leroy A. Wright, II	H. H. Tackey	Vista, 126 E. Vista way
Waterford	Los Angeles		825	825	Fred C. Collins	J. M. Green	E. M. Selby	Ellis W. Honeyman	Rivers, 2268 Parsons Blvd.
West Side	Stanislaus	1,450	825	2,275	M. F. Bradshaw	C. W. Slaughter	P. J. Minasian	W. Lehnkuhl	Waterford, P. O. Box 187
West Stanislaus	San Joaquin	3,100	1,350	3,450	Bert B. Banta	Wylsay R. Hansen	Geo. Wadsworth	W. F. Woolley	Tracy, Box 177
Woodbridge	Stanislaus, Merced	500	2,000	2,500	W. W. Cox	Lawrence D. Harrison	Vernon F. Gant	W. F. Woolley	Westley
	San Joaquin	1,500	4,000	5,500	J. E. Stewart	Carl A. Klenk	Gilbert L. Jones	W. F. Woolley	Lodi, Rt. 2, Box 148

DIRECTORY OF CALIFORNIA WATER STORAGE DISTRICTS

Arvin-Edison	Kern	3,500	12,500	16,000	Forrest Frick	C. B. Dickey	Johnston, Baker & Palmer	Paul Bailey	Bakersfield, 359 Haberfelde Bldg.
Buena Vista	Kern	800	3,200	4,000	L. H. Houchin	W. H. Parsons	J. E. Woolley	W. E. Throckmorton	Bottonwillow, Box B
North Kern	Kern				Hugh S. Allen	G. L. Henderson	Harry M. Conron	A. L. Trowbridge	Bakersfield 1712 19th Street
Tulare Lake Basin	Kings, Tulare				Louis Robinson	Dan Hadsell	Dan Hadsell	W. W. Ivans	Hanford, 109 W 8th Street

- (a) Double cropped acreage is not included.
 (b) Double cropped acreage is included.
 (c) Cordua furnished water for an additional 989 acres of duck ponds.
 (d) Glenn-Colusa furnished water for an additional 1,025 acres of duck ponds.

- (e) Estimated Acreage.
 (f) 1949 Crop report.
 (g) Imperial crop survey is as of March, 1950.
 (h) South San Joaquin irrigated area includes 5,290 acres that are considered sub-irrigated.

TABLE III
SUMMARY OF ASSESSMENTS LEVIED, PERCENTAGES DELINQUENT, TAX SALE CERTIFICATES
AND TAX DEEDED LANDS IN CALIFORNIA IRRIGATION DISTRICTS

For Calendar Year 1950

Name of District	Assessment 1949 - 1950					Assessment 1950 - 1951			Tax Sale Certificates			Tax Delinquent Lands

Water Storage Districts

Buena Vista	1	July 1, 1929	July 1, 1935-1968	6	942,731	----	942,731	676,500	NONE	NONE	NONE	NONE	2,560	NONE	4,383
-------------	---	--------------	-------------------	---	---------	------	---------	---------	------	------	------	------	-------	------	-------

- (a) Bond principal and interest due and unpaid are for bonds that have not been presented for payment.
- (b) Baxter Creek and Tule bonds are in a process of liquidation according to terms of interlocutory decree entered by the U. S. District Court of Northern California on January 3, 1946.
- (c) District holds \$80,500 of these outstanding bonds as an investment.
- (d) District land owners have acquired all outstanding bonds and warrants which are held in escrow pursuant to agreement.

- (e) District bonded indebtedness is still in process of liquidation as per decree of U. S. District Court for Northern California, Case #10503, March 4, 1944.
- (f) Includes \$12,500 in unmatured bonds purchased by District.
- (g) District issued 2nd Refunding bonds and paid off debt to R.F.C. "Hold out" bonds of original issue are still in litigation.
- (h) Other funds and securities held are in excess of bonds outstanding.
- (i) District purchased and holds \$44,000 of its outstanding bonds uncanceled.
