TIDAL CYCLE MEASUREMENTS ON THE SACRAMENTO RIVER AT SACRAMENTO

This stream gaging station, located on the left bank and 300 feet upstream from the "I" Street Bridge, is an important station within the Federal-State network of stream gaging stations dating back to November 1879 when the U. S. Weather Bureau reported gage heights only. This station contains a water stage recorder which provides a continuous record of the water surface elevation (stage).

The station is the lowest water flow measuring point on the Sacramento River before the river discharges into the Pacific Ocean. The maximum discharge for this station occurred on November 21, 1950, with a stage of 30.14 feet and a discharge of 104,000 cubic feet per second. On January 9, 1957, a telemark was installed with the recorder for transmitting instantaneous coded stage readings over a standard telephone circuit by dialing an assigned number.

During flow periods when the river discharge drops below approximately 35,000 cubic feet per second, the flow is affected by tidal influence which requires periodic tidal cycle measurements (generally monthly) with special computational procedures. During these periods personnel from both the Department of Water Resources and the U. S. Geological Survey cooperate in making a tidal cycle measurement. One measurement is made approximately each hour and 20 minutes throughout a 36-hour period, covering two and one-half tides. Four to five men usually work one or two of four nine-hour shifts, using an 18-foot outboard with a 30 horsepower motor as pictured above. Two patrol boats are also used, one upstream and one downstream from the station, to warn river traffic and to aid in raising and lowering the tag line (a steel cable, marked with regular stationing and fastened to a power winch, stretched across the 600-foot wide stream) so that traffic may pass.

Flows above 35,000 cubic feet per second are measured in the conventional manner using a stage-discharge relationship.

STATE OF CALIFORNIA

Department of Water Resources

SACRAMENTO

February 10, 1960

Honorable Edmund G. Brown, Governor,
and Members of the Legislature
of the State of California

Gentlemen:

I have the honor to transmit herewith Bulletin No. 23-57, "Surface Water Flow for 1957." The basic data concerning water flow, diversions, utilization, and salinity is presented in this report on a regional basis in accordance with the subdivision of the State into hydrographic areas.

This report continues the publication of water flow and utilization data collected and published as part of the Sacramento-San Joaquin Water Supervision Program, as well as pertinent water supply data gathered under other current programs of the Department. Additionally, the daily mean and crest stages formerly published in "Flood Flows and Stages in Sacramento and Northern San Joaquin Valleys" are included in this report.

Very truly yours,

Harvey O. Banks

HARVEY O. BANKS
Director

FOREWORD

This report presents to the user the extensive and varied basic hydrographic data resulting from thousands of measurements and observations of surface water flow and usage.

The three predominant types of data - stream flow, diversions, and daily mean and crest stages - are presented for time periods related to their occurrence and use: viz., stream flow, for the water year (October 1, 1956, through September 30, 1957); diversions, for the period November 1, 1956, through October 31, 1957, which includes the agricultural season of the 1957 calendar year; and daily mean and crest stages, for the period November 1, 1956, through June 30, 1957, encompassing the interval of high water flows occurring in California streams.

ACKNOWLEDGMENT

A large amount of the basic data presented in this report was necessarily obtained with the cooperation and assistance of many individuals, corporations, political subdivisions, and governmental agencies. It is gratifying to receive and to acknowledge this assistance. The fact that the assistance has been whole-hearted and objective is evidence of the interest shown in the water supplies of California and the importance given to this vital commodity by these agencies.

INTRODUCTION

General

This report of Surface Water Flow presents data for the water year ending September 30, 1957. The current data for the area covered by the reports of Sacramento-San Joaquin Water Supervision, published annually for the period 1924 through 1955, are included in the section of this report entitled Central Valley Area.

Records are presented in this volume for three of the seven major hydrographic areas of the State. These are:

North Coastal Area
Central Valley Area
Lahontan Area

It is anticipated that as the area of stream gaging activity is expanded, records for other hydrographic areas will be included.

The tabular data presented herein are shown under five general categories as follows:

1. Tables of daily mean stream flow.
2. Tables of daily mean and crest stages.
3. Tables of diversions and acreages irrigated.
4. Summary tables of categories 1 and 3.
5. Tables of supplemental information including precipitation, unimpaired runoff, and salinity.

The three plates included in this report show the following information:

Plate 1 shows the seven major hydrographic areas of the State, the location of surface water measurement stations, and by appropriate symbol the type of information obtained, and the area of measurement of diversions.

Plate 2 shows lines of maximum annual salinity encroachment in the Sacramento-San Joaquin Delta and Upper Bays.

Plate 3 shows hydrographs of reservoir operation for Shasta Lake, Folsom Reservoir, and Millerton Lake.

Programs

The information on stream flow, diversion and use of water, salinity observations, and water stages, as given in this report, is obtained in accordance with several programs of the Department of Water Resources and with cooperative agreements with other agencies.

Sacramento-San Joaquin Water Supervision Program. This program, initiated in 1924, is carried on to gather basic data relating to water supply and water utilization in the Sacramento and San Joaquin Valleys for the purpose of developing coordination between the supply and the several and varied uses of the water. Authorization for this program is provided by Sections 225 and 226 of the California Water Code.

Sacramento River Trial Distribution Program. This program, initiated in 1954, is aimed toward reaching a negotiated settlement between the local water users along the Sacramento River and in the Delta and the Bureau of Reclamation regarding their respective entitlements to the use of water and regarding provisions for a supplemental water supply.

Feather River Trial Distribution Program. The objective of this program which has been in progress since 1956, is to reach an agreement between local water users along the Feather River and the State of California regarding their respective entitlements to the use of water of this river and regarding provisions for supplemental water supplies from the Feather River Project.

Consumptive use refers to the water transpired, evaporated and used in promoting vegetative growth and to the water evaporated from soil and water surfaces adjacent to the place of use.

EXPLANATION OF TABULAR DATA

The tabular data presented herein are divided into the general categories of daily mean stream flow, daily mean and crest stages, monthly diversions, acreages irrigated, summaries of the foregoing, and supplemental information.

Stream Flow Tables

General. Stream flow station names are determined from the name of the nearest post office (Feather River at Yuba City), or a well known landmark (San Joaquin River at Fremont Ford Bridge). In order to more closely locate the station a brief narrative description is given in the footnote for each station. The mile point number represents distance above the mouth of the stream for all streams except the Sacramento River. For that stream the zero point is at the Tower Bridge in Sacramento. The letters L and R in conjunction with the mileage number represent left bank and right bank respectively, facing downstream. Additional information given in the footnotes includes the size of the drainage area, period of record, or other significant items pertaining to the station.

The stream flow tables are arranged in downstream order to facilitate the determination of the coverage of a given drainage area. Also, all stations on a tributary entering above a main stem station are listed before that station. Stations on a tributary entering between two main stem stations are listed between those stations. In order to locate a specific station, reference should be made to the Alphabetical Index of Stations or to Plate 1, showing the location of gaging stations by red wedges. Included with the tables of stream flow are tables showing reservoir contents in acre-feet.

Accuracy. All Department of Water Resources data reported herein are derived through the use of mechanical, arithmetical and empirical operations. Therefore, the results are affected by inherent inaccuracies in the procedures and equipment used. Consequently, it becomes necessary to establish limits of accuracy for which the data are reported. The following is a listing of significant figures for stream flow computation:

1. Daily flows
   - 0.0 - 9.9 — Tenths
   - 10 - 99 — 2 significant figures
   - 100 up — 3 significant figures
2. Means
   - 0.0 - 99.9 — Tenths
   - 100 - 999 — 3 significant figures
   - 1000 up — 4 significant figures

The instantaneous maximum flows usually represent values in the extreme high range of the rating curve and are therefore reported only to a maximum of three significant figures. The calendar and water year totals are reported to a maximum of four significant figures.

Content. The stream flow tables show daily mean flow in second-feet and monthly mean flow in second-feet and acre-feet. At the bottom of the table are given the peak instantaneous discharges in second-feet with dates of occurrence for the year and of record, and the total runoff in acre-feet for the water year and calendar year ending December 31, 1956.

Daily Mean and Crest Stage Tables

General. Two types of information are presented on stage, the height of water surface: (1) daily maximum and minimum tidal stages, presented for those areas subject to tidal action, as in the

Delta Area; (2) daily mean gage height, or an average of one or more daily staff gage or wire weight gage readings, presented for those areas beyond tidal influence. Of the 107 stations for which daily stages are presented in this report, sixty-six have computed daily mean flow included in the stream flow tables. The remaining forty-one stations, reported for stage only, have their locations shown on Plate 1 by blue wedges.

Actual measurements are included for those stations which do not have computed daily mean flows to provide an approximate stage-discharge rating of the station. Crest stages are included for historical reference, flood control levee maintenance, flood frequency studies, and actual design of hydraulic structures. To include pertinent data and avoid unnecessary information, a maximum of twelve crest stages is reported for any one station.

Accuracy. Gage heights are read in the field or interpolated from recording charts and reported as daily means to the tenth of a foot.

Content. Daily mean stages for each day of the month from November 1 through June 30 are tabulated in the main body of the table. Stations subject to tidal action, like Sacramento River at Sacramento Weir, contain a combination of maximum and minimum stages and daily mean stages when the flood flow is in excess of the tidal influence. The two smaller tables following contain crest stages in feet with date and time of occurrence, and measurements with attendant gage height in feet and computed discharge in cubic feet per second. Following the tabulated data is a narrative description of the station including current and historical information.

Diversions and Acreages Irrigated Tables

General. These tables primarily show the water diverted for agricultural purposes and the acreage irrigated thereby. The small amounts diverted in some reaches for municipal and industrial use are also reported. Because the major use of water is for agriculture, the tables show the diversions during the main growing season of March through October. Use of water outside this period is shown by a footnote to the table. Some of the tables for the San Joaquin and Tule Rivers are an exception to the foregoing; these tables present tabulated data for a twelve-month period.

Accuracy. Diversions, similar to stream flow, represent a calculated quantity of water flowing for a specified period of time. However, due to intermittent utilization and measurements, diversions are reported volumetrically in acre-feet on a monthly time basis. To provide information consistent with its usage, these monthly diversions are reported to the nearest acre-foot, as are the individual water user totals for the March through October season. The totals for specific tables and reaches within a table are reported to the nearest ten acre-feet for values to ten thousand acre-feet, and beyond this amount are reported to four significant figures.

Content. The information in the diversion tables includes the name of each diverter, the location of the point of diversion indicated in miles from the mouth of the stream (except Sacramento River, measured from Tower Bridge at Sacramento) and the amount of water diverted monthly and for the season. The method of diversion, whether by gravity or pump, is indicated. The size of the pump, given in inches, refers to the inside diameter of the discharge flange on the pump scroll.

The many types of crops grown vary in quantity of water application. However, as there is a major variation for rice, amounting to about twice as much water as the average applied to the other crops, the irrigated acreage is divided into two categories of crops: namely, general and rice.

Each table shows, for a stream, the total water diverted monthly and for the season. For the larger streams, total diversions are shown by reaches. The monthly use in per cent of seasonal is the relation of the total for any month to the total for the months tabulated.

Correlative and Summary Tables

General. The tabular comparisons showing the occurrences and uses of water result in the production of distinctive types of information. The uses of these data are many. In California where various water uses, flood control, navigation, and conservation development vie for priority and are interrelated, certain summary and correlative tables are in order. These tables are essential in order to provide ready reference and comparison.

Supply and Utilization. Inherent in the consideration of water conditions is the relationship between supply and utilization. This is particularly true during years of subnormal runoff when the demand equals or exceeds the supply. For this reason, correlative tables (16, 17, and 18) bringing together supply and demand are presented for the Sacramento and San Joaquin Rivers and tributaries and the Tule River. Along with the quantity of stream flow, flow from drains, and diversions, quantities of unmeasured accretions - resulting from such factors as release from, or retention in, bank storage; evaporation; return flow; unmeasured minor tributaries; and other related factors - are shown.

These tables show quantities which vary greatly in magnitude. Therefore, for ease of use, all quantities are shown to the nearest one thousand acre-feet. If a closer analysis of a stream or reach is needed, reference should be made to the individual stream flow or diversions tables, numbers for which are shown in the column preceding the monthly figures.

Delta Service Area. The complexity of waterways, tidal action, seepage, and methods of agricultural water use (a combination of subirrigation and surface application), results in hydrologic problems which preclude normal methods of measuring supply and demand. This Area is divided into uplands and lowlands (boundaries shown on Plate 2).

The correlation of water supply and demand for the Delta Service Area is shown in Table 15. The water supply available to the Area is determined from thirteen gaging stations, listed under "Water Supply" in the table, and from rainfall on the Area. "Water Utilization" in the same table includes agricultural use within the Area, exportations through the Delta-Mendota and Contra Costa Canals, and diversions by the City of Vallejo. The agricultural use in the uplands is determined by field measurement; however, in the lowlands, because it cannot be measured directly, agricultural use is determined by unit consumptive crop usages multiplied by crop acreages. Unit consumptive use factors were derived from early experimental work at Davis by the University of California and California Extension Service. Crop acreages are determined by periodic land use surveys, the most recent of which was made in 1955.

Utilization Summations. Summaries of diversions by streams for the last 10-year period are given in Tables 192 through 202. The data are given for each month in acre-feet, cubic feet per second and the monthly percentage in relation to the seasonal total. Table 191 correlates the data in the foregoing eleven tables by showing the comparison of the average monthly percentage use for each stream for the 10-year period. Table 203 summarizes, for the Sacramento River above Sacramento, the acreages irrigated as well as diversions for the last 10 years.

Supplemental Tables

General. The supplemental tables include information directly related to the surface water program of the Department and are presented for general information purposes. The types of information given are precipitation, runoff comparisons, tide gage locations, and salinity observations.

Precipitation. Table 12 presents the monthly precipitation for the water year for several stations in the Sacramento and San Joaquin Valleys from Shasta Dam to Fresno. The stations are not necessarily representative of the rainfall in any definite watershed or area, but give a general indication of the rainfall on the Central Valley floor.

Runoff Comparisons. The relative magnitude of runoff occurring on any one stream for a given year is determined by comparing the natural or unimpaired runoff of that year with the mean runoff of the stream over a long period of years. For this report, runoff comparisons are based on percentages of average determined for the 50-year period October 1905 through September 1955. Table 14 shows the unimpaired average annual flows for major streams of the Central Valley Area, and the annual runoff in percentage of the 50-year average for each year from 1920 through 1957. Table 13 gives the monthly flow as a percentage of the 50-year average for the same streams.

Tide Gages. Table 241 lists the locations of 36 recording tide gages in the Delta channels. Locations are also shown on Plate 2.

Salinity Observations. The ebb and flow of saline waters in the Delta Area has been of concern for many years. Table 238 lists the salinity sampling stations. The stations are listed commencing with the Golden Gate as zero miles and proceeding through the Bay system to the Delta Area. The samples, when possible, are taken one and one-half hours after high tide at four-day intervals. The observed concentrations of salinity are given in Table 240. The geographical location of these stations is given on Plate 2, together with the line of maximum salinity encroachment (the line of 1000 parts of chloride per 1,000,000 parts of water) for the current water year and for other years of historical interest.

Tabular Information

Tables of stream flow, daily mean and crest stages, diversions and acreages irrigated, summaries of the detailed data, and supplemental information for the 1957 water year follow.

NORTH COASTAL AREA

NORTH COASTAL AREA

Introduction

The information relating to the North Coastal Area is meager; however, the volume and importance of the data will increase with the expanding search for knowledge as to the occurrence and use of water in an area of the State having a high water development potential.

The North Coastal Area extends for about 270 miles along the coast from the California-Oregon line south to the northern boundary of the Lagunitas Creek basin in Marin County. It ranges in width from 180 miles at the Oregon boundary to 30 miles in the southern portion. The topography of the area is predominantly mountainous, with many peaks above 6,000 feet. Mount Shasta, at elevation 14,161 feet, is the highest peak in the region. Stream flow is sustained through the summer and early fall by ground water seepage from a thick, absorptive soil mantle.

Tabular Information

On the following pages are the data for 11 gaging stations, which represent the information available for the 1957 water year in the North Coastal Area.

CENTRAL VALLEY AREA

CENTRAL VALLEY AREA

Introduction

The Central Valley Area is the locale of five important hydrologic features that focused early attention on the need for gathering basic data of water occurrence and utilization. These features are:

1. The existence of the two largest river systems in the State, namely the Sacramento and San Joaquin Rivers.
2. The occurrence and development of the extensive agricultural lands contiguous to these river systems.
3. The complexities of the Delta channels at the confluence of these two river systems.
4. The climatic conditions which result in low flows during much of the agricultural season and, in dry years, critical water shortages.
5. The intrusion of saline waters into the Delta Area during periods of low stream flows.

The gathering of basic data necessary for determining the best use of water resources has continued through several programs. The three major programs under which data in this report have been gathered are Sacramento-San Joaquin Water Supervision, Trial Distribution, and California Water Development. The development of the Central Valley Project and the accelerated participation of the State in water development construction have increased and broadened the need for, and the value of, data on surface water flow.

Sacramento-San Joaquin Water Supervision Program

General. This is the oldest of the basic data gathering programs and, although primarily concerned with water utilization (diversions), information on stream flow and irrigated acreages is also obtained.

History. The exceptionally dry year of 1924 emphasized the necessity of knowing how much water was available and how it was being used along the Sacramento and San Joaquin Rivers. In that year the State was asked by the water users, through the Permanent Committee of the Sacramento-San Joaquin River Problems Conference, to gather data on water supply and demand. A parallel task was that the State would make recommendations for action, to the committee, when acute water shortages were anticipated.

During the early years, this program was financially supported to a large extent by contributions from the water users. Since about 1944, State funds have been made available through budgetary channels by the Legislature and through cooperative arrangements with federal and local agencies.

The geographical area of activity, during the early years of this program, was confined to the main stems of the Sacramento and San Joaquin Rivers. As the data usage was expanded, the program likewise increased through the years. Most of the tributary streams throughout the entire Sacramento-San Joaquin Valley, including much of the foothill area, are now reported upon. This coverage encompasses both measurements of stream flow and measurements of diversions.

Trial Distribution Programs

General. The Central Valley Project, constructed and operated by the U. S. Bureau of Reclamation, has changed the picture of water supply and utilization in the Sacramento and San Joaquin Valleys. Through storage and regulation more water has been made available during the period of normally low runoff, which period coincides with the period of high agricultural demand. This change has ameliorated some problems, created others, and realigned consideration of still others.

Sacramento River Trial Distribution Program. The completion in 1943 of Shasta Dam on the upper Sacramento River has markedly changed the flows of that stream during flood seasons and low flow periods. In addition to other benefits, the regulation of the flow has provided water to: (1) aid navigation;

(2) reduce the encroachment of saline waters into the Delta Area; and (3) improve diversions during the agricultural season.

This improved water supply has not been accomplished without concomitant problems. In order to arrive at a solution to the difficult water rights problems of users along the Sacramento River below Keswick and along the Delta channels, an agreement entered into in July 1952, between the Bureau of Reclamation, the State of California, and the Sacramento Valley Water Users Committee, provided for the accumulation and study of data of water supply and use. The information gathered under this agreement was used as a basis, in 1954, for entering into the "Sacramento River and Delta Trial Distribution Agreement for 1955." The parties to this agreement were the Bureau of Reclamation, the State, and the Sacramento River and Delta Water Association (formed as successor to the Sacramento Valley Water Users Committee in order to include water users in the Delta). This agreement provided for testing of trial diversion schedules in order to develop a comprehensive schedule satisfactory to all interests. Studies under this program are being continued.

American River Trial Distribution Program. Operation of Folsom Reservoir on the American River was started in 1955. In order to gather data needed for a solution of anticipated water rights problems, a trial distribution program for this stream below Nimbus Dam was initiated in 1956.

Feather River Trial Distribution Program. In anticipation of the upstream development of this stream system by the State of California, a trial water distribution program covering the valley floor areas of the Feather and Yuba Rivers has been initiated in order to accumulate data on water supply and utilization for use in operating the Feather River Project.

California Water Planning Program

In connection with the activities of the Department's California Water Planning Program, surface water measurements include the collection of stream flow data at specified locations for studies of water development.

Tabular Information

On the following pages are tables of stream flow, diversions and acreages irrigated, summaries of the foregoing, and supplemental information for the 1957 water year.

Note: The unmeasured accretions between gaging stations were computed by subtracting the measured inflows to a reach from the sum of the measured diversions and measured outflows from that reach. Unmeasured stream flow for periods of no record are included in the unmeasured accretions.

a Not included in computations of unmeasured accretions.
a Includes diversions from Stony Creek by Glenn-Colusa Irrigation District.
b Includes diversions from Feather River below Nicolaus.
c Includes diversions from American River below "N" Street Bridge.
d Includes diversions from Yuba River below Mile 5.2.
e Includes diversions from Bear River below Wheatland.

These quantities are the daily mean second-feet inflow to Shasta Lake taking into account change in storage, release, spill, precipitation, and evaporation and are representative of the natural flow passing the dam site if the dam had not been constructed. Drainage area is 6,665 square miles (excluding Goose Lake Basin). Period of record November 1942 to date. Records computed by U. S. Bureau of Reclamation.

Station located 6 miles above mouth, above the Glenn-Colusa Irrigation District canal crossing. The flow to the Sacramento River is cut off during irrigation season by an earth fill installed by Glenn-Colusa Irrigation District to transport water from their main canal across Stony Creek. Diversions from Stony Creek by G.C.I.D. in acre-feet amounted to: March 0300, April 10700, May 7460, and June 550. Drainage area is 764 square miles. Stony Creek is a west side tributary to Sacramento River at Mile 138.0R above Sacramento. Period of record January 1941 to date. Records computed by U. S. Geological Survey.

Total Discharge Ac.-Ft. For 56-Calendar Year
56-57 Water Year

Station located at Mile 103.3R above Sacramento. Also known as "Sacramento River at Gordon Pump." Daily flow records computed for only the irrigation season as part of the Sacramento River Trial Distribution program. Records of flow above 24,500 c.f.s. are based on correlation with adjacent gaging stations and should not be considered to have the same degree of accuracy as the records for other gaging stations in this report. Period of record March 1954 to date (irrigation season only). Records computed by Department of Water Resources.

* Estimated

56-57 Water Year 229900

Station located 0.7 mile below Little Butte Creek, 7.5 miles east of Chico. Drainage area is 148 square miles. Butte Creek enters Butte Slough at Mile 0.6E above its junction with the Sacramento River. Flows into the Sacramento River are regulated by gates at the mouth of Butte Slough. See notes on Butte Slough to Sacramento River and Butte Slough to Sutter Bypass. Period of record November 1930 to date. Records computed by U. S. Geological Survey.

Station located at outfall gates at junction of Sacramento River, Mile 84.0L above Sacramento. Flow is measured at and regulated by gravity culverts. These flows, together with the flow of Butte Slough to Sutter Bypass and Wadsworth Canal to Sutter Bypass are, during the summer months, made up almost entirely of return water from lands irrigated by Feather River diversions. Period of record June 1924 to October 1938 (low water periods only); January 1939 to date. Records computed by Department of Water Resources.

* Estimated

Total Discharge Ac.-Ft. For 56-Calendar Year 31320; 56-57 Water Year 14510

This is drainage returned by gravity and pumping to the Sacramento River at Mile 68.8L above Sacramento. This plant also discharges to an irrigation canal and is a combination irrigation and drainage plant. Period of record May 1924 to October 1938 (low-water periods only); January 1939 to date. Records computed by Department of Water Resources.

Maximum Discharge C.F.S. For: Water Year — Year of Record

Total Discharge Ac.-Ft. For: 56-Calendar Year — 56-57 Water Year

Station located at Mile 46.4 above Sacramento. Daily flow records computed for the irrigation season only as part of the Sacramento River Tri l Distribution program. The records are based on current meter measurements and on correlation with adj cent gaging stations and should not be considered to have the same degree of accuracy as the records for other gaging stations published in this report. Period of record March 1955 to date (irrigation season only). Records computed by Dep_rtment of Water Resources.

* Estimated

Station located [illegible] Mile 37.0 above Junction with Sacramento River. Also known as "Colusa Trough at Colusa Weir" and "Colusa Trough at Highway 20". The flow is return water in the main drain of Reclamation District 2047. It is derived chiefly from lands irrigated by Glenn-Colusa, Provident, Princeton-Codora-Glenn, Compton-Delevan, Maxwell, and Jacinto Irrigation Districts. Period of record June 1924 to December 1940 (low-water periods only); May 1949 to date. Records computed by Department of Water Resources.

Station located on Back Borrow Pit of Reclamation District 108 at Mile 22.5L above junction with Sacramento River. Also known as "Back Borrow Pit near College City" and "Colusa Trough near College City". This is drainage chiefly from lands irrigated by Glenn-Colusa, Provident, Princeton-Codora-Glenn, Compton-Delevan, Maxwell, and Jacinto Irrigation Districts. Backwater from Knights Landing Outfall Gates at times affects stage-discharge relationship of this station. Period of record October 1944 to April 1952; March 1954 to date. Records computed by Department of Water Resources.
* Estimated

This is drainage returned to the Sacramento River at Mile 34.15R above Sacramento, 0.15 miles above the Knights Landing gaging station. Flows are controlled at the Knights Landing Outfall Gates, Mile 0.25 above junction with Sacramento River. A portion of the flow is diverted to Ridge Cut at Knights Landing. For total flow to Sacramento River, combine with flows of Sycamore Slough. Period of record May 1924 to October 1939 (low water periods only); January 1940 to date. Records computed by Department of Water Resources.
* Estimated

This is drainage from Reclamation District 787 returned to Colusa Basin Drain by pumpin below the Knights Landing outfall gates. This flow is not included in flow of Colusa Basin Drain at Knights Landing. Daily distribution of flows is not available since the plant operates on an automatic float switch. Additional drainage from Reclamation District 787 is returned to the Sacramento River at Mile 37.OR above Sacramento. Period of record January 1940 to date. Records computed by Department of Water Resources.

Total Discharge Ac.-Ft. For 56-Calendar Year 3650000; 56-57 Water Year 541900

Station located at Mawson Bridge, Mile 2.1 above junction with Sacramento River. During the summer months, flow, regulated by gates at head of Slough, is made up almost entirely of return water from lands irrigated by Feather River diversions. During flood periods, Sacramento River water enters Butte Basin above Butte City by bank spill and over Moulton and Colusa Weirs. Period of record January 1939 to date. Records computed by Department of Water Resources.

Total Discharge Ac.-Ft. For 56-Calendar Year 117800; 56-57 Water Year 50960

Station located at Butte House Road, Mile 3.6 above mouth. This is the discharge (measured at Weir No. 4) to the East Borrow Pit of the Sutter Bypass at Mile 16.5 northerly of Chandler. This flow is made up primarily of Feather River drainage or return flows. This flow and flow of Butte Slough to Sutter Bypass make up the entire Feather River contribution to the Sutter Bypass. Period of record January 1939 to date. Records computed by Department of Water Resources.
* Estimated

Maximum Discharge C.F.S. For	Water Year Year of Record	Total Discharge Ac.-Ft. For	56-Calendar Year 56-57 Water Year

During low flow, this represents the entire outflow of the Sutter Bypass area and Reclamation District 1500 Drain to the Sacramento River at Mile 21.2L above Sacramento. Sharp rises in Sacramento River elevations will cause zero or negative flow. During high flow, the slough is entirely submerged as it lies within the bypass area. Tisdale Weir, Butte Slough to Sutter Bypass, Wadsworth Canal to Sutter Bypass, and Reclamation District 1500 Drain when combined will give the measured flow into the bypass area which enters the Sacramento River between Mile 20.9 and 28.0 above Sacramento. Period of record May 1924 to October 1938 (low water periods only); January 1939 to date. Records computed by Department of Water Resources.

* Estimated

Station located 1.0 mile above mouth. Drainage area is 84.6 square miles. Deer Creek enters the Yuba River 1.0 mile below Englebright Dam. For total flow of Yuba River near Smartville, combine with flows of Yuba River at Englebright Dam. Period of record June 1935 to date. Records computed by U. S. Geological Survey.
(a) Discharge of 11,300 c.f.s. was also recorded March 9, 1955.

Station located at Mile 23.05 above mouth. Station is rated above 30,000 c.f.s. by means of simultaneous measurements of Yuba River at Marysville and Feather River at Yuba City taking into consideration appropriate time lag. Severe silting conditions and shifting control necessitated the estimating of much of the summer flow. Period of record June 1944 to October 1945 (low water periods only); January 1946 to date. Records computed by Department of Water Resources.
* Estimated

Station located at the "H" Street bridge, Mile 6.5L above mouth. American River is an east-side tributary to the Sacramento River at Mile 1.1L above Sacramento. Backwater from the Sacramento River at times affects the stage-discharge relationship of this station. Period of record July to October 1921; May 1924 to December 1943 (low water periods only); January 1944 to date. Records computed by U. S. Geological Survey.

Year of Record	104,000 November 21, 195[illegible]		56-57 Water Year	13190000	

Station located at Mile 0.6L above "M" Street bridge, 0.2 mile below City of Sacramento intake, 0.5 mile below the confluence of the American River. Thia represents the flow of the Sacramento River past Sacramento into the Delta. Additional Sacramento River water reaches the Delta via Sacramento Weir and Yolo Bypass near Woodland. Daily mean flows are computed from curves which take into account tidal fluctuations during low stages. Period of record 1904, 1905, July to October 1921; May 1924 to December 1942 (low-water periods only); May 1943 to date. Records computed by U. S. Geological Survey.

Flow is referred to the recorder in the Tule Canal below Sacramento Bypass except during periods of high water when it is referred to the recorder at Elkhorn above Sacramento-Woodland railroad bridge. Also known as "Yolo Bypass at Elkhorn". To get total flow through Yolo Bypass below Sacramento combine with Sacramento Weir and Putah Creek near Davis. Flow includes Cache Creek at Yolo, Ridge Cut at Knights Landing, and Fremont Weir. Period of record March 1930 to October 1938 (low-water periods only); January 1939 to date. Records computed by U. S. Geological Survey.

These quantities are the daily mean second-feet inflow to Friant Reservoir, taking into account change in storage, release, spill, precipitation, and evaporation, and are representative of the natural flow passing the dam site if the dam had not been constructed. Drainage area is 1,633 square miles. Period of record October 1941 to date. Records computed by U. S. Bureau of Reclamation.

Station located 0.20 mile below head of slough between Merced and San Joaquin Rivers. Also known as "Merced River Slough near Hills Ferry Road Bridge." This station records the flow which at high stages in the Merced River bypasses the Hills Ferry Road Bridge and reaches the San Joaquin River at Mile 122.2R above mouth, 1.5 miles below Newman gaging station. Period of record October 1941 to date. Records computed by U. S. Geological Survey.

Station located at Mile 1.9R above mouth. Stanislaus River is an east-side tributary to the San Joaquin River at Mile 10.7R above mouth. Backwater from the San Joaquin River at times affects the gage-height-discharge relation at this station. Period of record September 1951 to date. (Prior records available at other sites for 1940 to 1950.) Records computed by Department of Water Resources.

* Estimated

Maximum Discharge C.F.S. For Water Year 2,880 March 5, 1957
Year of Record

Total Discharge Ac.-Ft. For 56-Calendar Year
56-57 Water Year 35430

Station located 0.15 mile above the Farmington-Bellota Road Bridge. Flows are regulated by headgates. Mormon Slough diverts from Calaveras River at Mile 25.3L above mouth and rejoins the river through Stockton Diverting Canal at Mile 5.4L above mouth. Period of record December 1948 to date. Records computed by Department of Water Resources.

a Additional acre-feet diverted: November 2444, December 2333, January 2270 and February 2035.
b Includes 40 acres which also received an undetermined amount of well water.
c This acreage also received an undetermined amount of well water
d All Peabody lands.
e Additional acre-feet diverted: February 14.
f Includes 230 acres which also received an undetermined amount of water from controlled drainage.
g Includes 90 acres which also received an undetermined amount of well water.
h Additional acre-feet diverted: November 2569, December 2592 and January 361.
i This acreage also received 13,450 acre-feet of water from Cache Creek and an undetermined amount of water from Willow Slough and controlled drainage.
j Includes 260 acres of duck club land.
k Of this acreage, 100 was reused as duck club land. Includes 772 acres outside of Woodland Farms Incorporated.
m Replaces a 5" unit.
n Additional acre-feet diverted: November 15 and December 13.
p Combined acreage for Miles 13.1R and 13.25R. This acreage was double cropped.
q 102 acres of general crops and 146 acres of rice listed for Mile 14.1L were irrigated by 2456 acre-feet of water from Mile 16.0L. 90 acres of general crops listed for Mile 14.1L also received an undetermined amount of water from Mile 16.0L.
r Additional acre-feet diverted: December 2 and January 2.
s Combined acreage for Miles 16.62R and 17.0R.
t Includes 280 acres which also received 163 acre-feet of water from Mile 6.3L, Knights Landing Ridge Cut.
u Additional acre-feet diverted: December 19.
v Of this acreage, 105 was double cropped.

* Mile 19.6L Cross Canal. Distance from Sacramento River and bank are shown in parentheses.
a Previously listed as a 28" unit.
b Combined acreage for Ukropina plants at Mile (3.3N) and (3.35N)
c New installation in 1957.
d Installed prior to 1957. Not previously listed.
e Plant is located in Grays Bend, an old channel of the Sacramento River, in which water is derived from seepage and a gated pipe to the river. Distance from river is shown in parentheses.
f Includes an undetermined amount of water furnished to acreage listed for Mile 4.75L, Knights Landing Ridge Cut.
g This acreage also received an undetermined amount of water from controlled drainage.
h Additional acre-feet diverted: January 4.
i Additional acre-feet diverted: February 406.
j Of this acreage, 40 was double cropped.
k Replaces a 12" unit.
m Additional acre-feet diverted: November 11.

a Diversion for stock water only.
b Additional acre-feet diverted: December 28.
c Includes 162 acres of Guisti lands.
d Acre-feet diverted: December 36.
e Replaces a 5" and a 6" unit.
f Additional acre-feet diverted: January 364.
g Includes 21264 acre-feet delivered to River Farms Company as follows: April 2279, May 4229, June 4266, July 4417, August 4525 and September 1548.
h Includes acreage as follows: Reclamation District 108, general 2344 and rice 4683; River Farms Company, general 304 and rice 2189.
i Combined acreage for Miles 44.2L and 46.45L.
j Includes 115 acre-feet spilled into a lake.
k Includes an undetermined amount of water spilled to a lake for sub-irrigation.
m New installation in 1957.
n Combined acreage for Miles 49.0L and 49.7L.
p Additional acre-feet diverted: December 48.
q Includes 40 acres of Broomieside Farms lands that received 13 acre-feet for duck ponds.
r The acreage listed for Mile 61.3R also received 41 acre-feet from Mile 61.5R.
s Additional acre-feet diverted: February 1.

TABLE 207

DIVERSIONS AND ACREAGES IRRIGATED - SACRAMENTO RIVER (Wilkins Slough to Colusa) (contd.)
November 1956 through October 1957
(Nov. 1956 through Feb. 1957 - see footnotes)

a The 48" unit was installed in 1957.
b Additional acre-feet diverted: January 43 and February 944.
c This acreage also received 1058 acre-feet of water from plant on Colusa Basin Drain, Mile 19.9L.
d Additional acre-feet diverted: November 93. Includes 7096 acre-feet of water served to lands in Reclamation District 1660 as follows: April 132, May 1823, June 1327, July 1725, August 1547 and September 542.
e Includes 728 acres of general and 629 acres of rice in Reclamation District 1660.
f Additional acre-feet diverted: December 8.
g 120 acres of general crops listed for Mile 64.4L also received an undetermined amount of water from Mile 67.1L.
h Includes 250 acres of general and 95 acres of rice crops of F. Winship lands which are outside the district and received 1292 acre-feet of water.
i This water supplemented a drainage supply which irrigated 1062 acres of general and 149 acres of rice crops.
j The 10" unit was installed in 1957.
k Includes 41 acres of Rohlieder lands.
m Includes 130 acres of Steidlmayer lands.
n Additional acre-feet diverted: December 32 and January 18.
p Includes 120 acres of Steidlmayer lands.
q Includes 20 acres of Coffman lands and 15 acres of Miller lands.
r Includes 18 acres of Albertson lands.
s The rice acreage listed for Mile 78.75R received all water diverted at Mile 78.8R.
t Includes 30 acres of Davis land, 30 acres of Lemos land and 30 acres of Stass land.
u Includes 15 acres of Oil Terminals Company land.
v The acreage listed for Mile 79.5L also received an undetermined amount of water from Mile 79.7L.
w Includes 62 acres of Burtis lands.
x An additional 545 acres of general and 218 acres of rice were irrigated by controlled drainage.
y Formerly listed as Wayne Hall Estate and E. J. Burrows.
z Formerly listed as Wayne Hall Estate.
aa Additional acre-feet diverted: November 12.
ab Additional acre-feet diverted: November 6, December 50, January 28 and February 116.
ac The acreage listed for Mile 83.3L also received the 54 acre-feet of water from Mile 83.5L.
ad Formerly listed as Mitchel Lobrovich and John Brayovich.
ae Additional acre-feet diverted: November 2.
af Additional acre-feet diverted: November 43.
ag Additional acre-feet diverted: November 658, December 326 and January 99.
ah This acreage was reused for duck ponds and also received an undetermined amount of water from Butte Creek, Mile 4.3R.

a Additional acre-feet diverted: November 45 and December 29.
b The 3" unit was a temporary installation during 1957.
c Formerly listed as George P. Ahle.
d Replaces a 6" and 10" unit.
e New installation in 1957.
f Combined acreage for Mile 92.6R and 93.0R.
g Temporary installation for 1957.
h Includes 20 acres of Mayfair lands and 10 acres of Nalsey lands.
i Additional acre-feet diverted: November 441, December 374 and January 63.
j Includes 140 acres of Monsen Estate lands.
k Additional acre-feet diverted: November 13 and December 1.
m Additional acre-feet diverted: November 80.
n Includes 27 acres of O'Sullivan lands.
p Includes 20 acres of Richard Patton lands.
q Replaces a 10" unit.
r Additional acre-feet diverted: December 75.
s Includes 26 acres of Middlecamp lands.
t Formerly listed as Dave George.
u A 4" unit was removed in 1957.
v Includes 378 acres which also received an undetermined amount of well water.
w Formerly listed as Nettie, George and Ella Packer.
x Additional acre-feet diverted: December 20 and January 26.
y Additional acre-feet diverted: December 6.
z Includes 100 acres of Helphenstine lands which also received an undetermined amount of well water.
aa Additional acre-feet diverted: November 65.
ab Additional acre-feet diverted: November 1081.
ac Includes 132 acres of rice and 40 acres of general crops outside the district: Includes 3238 acres of rice and 2354 acres of general crops which also received an undetermined amount of water from plants on Lower Butte Creek, Miles 11.8R(2.6) and 14.4R(0.2): and includes 1606 acres of rice and 1453 acres of general crop lands reused for duck ponds.
ad Combined acreage for Miles 112.4R and 123.9R and plant on Colusa Basin Drain, Mile 54.2L. Includes 144 acres of general crops that received 576 acre-feet of water from Glenn-Colusa Irrigation District plant at Mile 154.8R.
ae Additional acre-feet diverted: November 1.

a Combined acreage for Miles 112.4R and 123.9R and plant on Colusa Basin Drain, Mile 54.2L.
b Previously listed as 36" units.
c Additional acre-feet diverted: November 2281 and December 2606.
d Combined acreage for this plant and plants on Colusa Basin Drain, Miles 24.2R (1.5W), 25.8L (2.5W), 27.2R (0.1) and 27.2R (2.6W). Includes 390 acres of rice and 186 acres of general crops that received 3864 acre-feet of water from Glenn-Colusa Irrigation District plant at Mile 154.8R.
e Additional acre-feet diverted: November 53, December 52 and January 5.
f Previously listed as a 12" unit.
g The 6" unit was installed in 1957.
h Additional acre-feet diverted: November 137, December 247, January 20 and February 235.
i Includes acreage as follows: M.&T. Incorporated - general 945, rice 641; Parrot Investment Company - general 2337, rice 1082. This acreage also received an undetermined amount of water from Butte Creek.
j Quantities shown are diversions at Mile 154.75R to Glenn-Colusa Irrigation District canal. Additional acre-feet diverted: November 6931 and December 1367.
k This is a common point of diversion for Glenn-Colusa, Compton-Delevan and Maxwell Irrigation Districts.
m Additional acre-feet diverted by gravity from Stony Creek as follows: March 10300, April 10700, May 7460 and June 550. An additional 2061 acre-feet diverted by plant on Colusa Basin Drain, Mile 29.8R (1.4). Includes 3864 acre-feet served to 390 acres of rice and 186 acres of general crops listed for Mile 124.2R. Includes 576 acre-feet served to 144 acres of general crops listed for Mile 112.4R. Additional acre-feet diverted: November 6931 and December 7651.
n This acreage also received an undetermined amount of water by controlled drainage. Of this acreage, 1104 was reused for duck ponds. Includes the following acreage outside the district: general 436 and rice 1180.
p Glenn-Colusa Irrigation District served 6644 acre-feet of water to this district.
q Additional acre-feet diverted: November 2 and December 1.
r Additional acre-feet diverted: November 2, December 1, and January 1.
s Includes 4 acres of Dennis lands.
t Additional acre-feet diverted: December 1.
u The 6" unit was a temporary installation during 1957.
v One 8" unit was installed in 1957.
w Combined acreage for Miles 168.85R and 168.9R.
x Installed prior to 1957, not previously listed.
y Additional acre-feet diverted: January 1 and February 2.
z Includes 80 acres which also received an undetermined amount of water from Los Molinos Mutual Water Company.
aa Formerly listed as Henry Tieden.
ab Temporary installation during 1957.

November 1956 through October 1957
(Nov. 1956 through Feb. 1957 - see footnotes)

* Carries return water from Colusa Basin along west border of Reclamation Districts 108 and 787 and discharges to Sacramento River at Mile 34.15R or is partially diverted via Knights Landing Ridge Cut.
** Mileage along Colusa Basin Drain from junction with Sacramento River.
a Of this acreage, 4 was reused for duck ponds.
b Includes 105 acres which also received an undetermined amount of well water.
c Additional acre-feet diverted: November 134, December 113, and January 21.
d Of this acreage, 25 was reused as duck clubs.
e Additional acre-feet diverted: January 180.
f Of this acreage, 180 was reused for duck clubs.
g This water was served to acreage listed for Mile 63.2R, Sacramento River.
h Additional acre-feet diverted: November 36 and December 4.
i Of this acreage, 40 was reused as duck clubs.
j A 16" unit was removed in 1957.
k All stock water.
m Additional acre-feet diverted: January 105 and February 56.
n Includes 137 acres which also received an undetermined amount of well water.
p This water was served to acreage listed for Mile 154.8R, Sacramento River. Includes an undetermined amount of water return to Colusa Basin Drain by spill.
q Additional acre-feet diverted: November 337 and December 325.
r All duck refuge lands.
s Acre-feet diverted: November 50, December 35 and January 13.
t All duck club lands.
u Additional acre-feet diverted: November 1 and January 16.
v Additional acre-feet diverted: November 1181, December 888 and January 127.
w Additional acre-feet diverted: November 88 and December 52.
x Of this acreage, 400 was reused as duck clubs.
y This acreage also received an undetermined amount of controlled drainage water.
z Water used to soak ditch banks. Additional acre-feet diverted: November 55.
ca Acre-feet diverted: November 50 and December 6.
cb Formerly listed as A. E. Zaniboni and L. W. Seaver.
cc Additional acre-feet diverted: November 89, December 80, January 29 and February 13.
cd Acre-feet diverted: November 11.
ae Additional acre-feet diverted: November 9, December 83, and January 36.
af Replaces a 16" unit. One 12" unit was a temporary installation during 1957.
ag Additional acre-feet diverted: November 65 and December 23.
ah Of this acreage, 15 was reused for duck clubs.
ai Includes an undetermined amount of water derived from Stone Corral Creek. Additional acre-feet diverted: November 340, December 102 and January 14.
aj All reused for duck clubs.
ak Additional acre-feet diverted: November 92, December 17, and January 14.
am Formerly listed as Leo Yates
an Additional acre-feet diverted: November 51 and December 14.
ap Additional acre-feet diverted: November 40, December 17, and January 11.
aq Additional acre-feet diverted: November 20, December 4, and January 4.
ar See plant at Mile 112.4R, Sacramento River.
as Additional acre-feet diverted: November 11, December 13, January 3, and February 5.
at This water was served to acreage listed for Mile 124.2R, Sacramento River.
au Additional acre-feet diverted: November 278.
av Installed prior to 1957. Not previously listed.
aw Combined acreage for Miles 63.7L and 64.1L.
ax Additional acre-feet diverted: November 18, December 27 and January 10.
ay Additional acre-feet diverted: November 345.

* Mileage downstream from head on Colusa Basin Drain near Knights Landing. Flow is principally Colusa Basin Drainage diverted to the Ridge Cut by checking at Knights Landing Outfall Gates.
a This acreage also received an undetermined amount of well water.
b This acreage also received an undetermined amount of water from Mile 28.1R (1.3), Sacramento River.
c Previously listed as Layton D. Knaggs.
d Includes 667 acre-feet of water served to 740 acres of general crops in Reclamation District 1600 and 163 acre-feet served to 280 acres listed for Mile 16.62R, Sacramento River.
e Includes the 740 acres irrigated in Reclamation District 1600. See note (d).

* Mileage is given northerly or southerly from North Levee of Sacramento Bypass. Diversions from East Borrow Pit of Yolo Bypass are primarily from water diverted through Knights Landing Ridge Cut.
a Indicates that land irrigated is within Bypass area.
b Previously listed as Mile 1.8S.
c Replaces a 16" and an 18" unit.
d One 14" unit was a temporary installation during 1957. A 12" unit was removed.
e This acreage also received an undetermined amount of well water.
f The main source of water for this acreage is the Woodland Sewer Farm.

* Mileage on Butte Creek from junction with Butte Slough at Mile 0.6E.
** Mileage on Butte Slough from junction with Sacramento River at Mile 84.0L.
a Includes an undetermined amount of water served to acreage listed for Mile 89.25L, Sacramento River. Additional acre-feet diverted: November 999, December 686 and January 76.
b This acreage was reuaed for duck ponds.
c Additional acre-feet diverted: January 62.
d Additional acre-feet diverted: November 100, December 100 and January 50.
e All duck club lands.
f Additional acre-feet diverted: November 149, December 155 and January 27.
g Includes an undetermined amount of water served to acreage listed for Mile 112.1L, Sacramento River. Additional acre-feet diverted: November 3564, December 3683 and January 992.
h This water waa served to acreage listed for Mile 112.1L, Sacramento River. Additional acre-feet diverted: November 1485, December 1535 and January 744.
i Estimated acre-feet diverted: November 3000 and December 1500.
j Additional acre-feet diverted: November 75, December 86, and January 84.
k This acreage also received an undetermined amount of well water.
m A 14" portable unit also operated at this location in 1957.
n A 14" and s 16" portable unit also operated at this location in 1957.
p Additional acre-feet diverted: November 58 and January 35.
q A 16" portable unit operated at this location in place of the electric unit during 1957.
r Installed prior to 1957. Not previously listed.
s This acreage also received an undetermined amount of controlled drainage water.
t Flow in Butte Slough, derived from Butte Creek, is controlled by outfall gates at junction with Sacramento River and is thereby retained to discharge into East and West Borrow Pits of Sutter Bypass near "Long Bridge". The outfall gates are maintained by the Depsrtment of Water Reaourcea and are operated cooperatively with the Butte Slough Irrigation Company.
u Additional acre-feet diverted: December 26.
v Includes 80 acres of Straub lands and 25 acres of Hickson lands.
w Includes 16 acres of C. P. Reische lands.

TABLE 215

DIVERSIONS AND ACREAGES IRRIGATED - SUTTER BYPASS AND SACRAMENTO SLOUGH (contd.)
November 1956 through October 1957
(Nov. 1956 through Feb. 1957 - aee footnotes)

* Mileages on Weat Borrow Pit are given northerly from drain plant of Reclamation District 1500. Mile 9.15 on West Borrow Pit is opposite Chandler.
** Mileages on East Borrow Pit are given northerly or southerly from Chandler.
*** Mileages on Sacramento Slough are given easterly from drain plant of Reclamation District 1500 which is at head of Slough.
8 Plant is on the main drainage canal for Dralnage Plant #1 that joins East Borrow Pit of Sutter Bypass at Mile 1.4N. Figure in parentheees indicates distance along drain from Esst Borrow Pit.
88 Plant is on drainage canal for Orainage Plant #2 that joins East Borrow Pit of Sutter Bypass at Mile 10.ON. Figure in parentheses indicates distsnce along drain from East Borrow Pit.
ϑ Plant is on Wadsworth Canal that joins East Borrow Pit of Sutter Bypass at Mile 16.5N. Figure in parentheses indicates distance along canal from East Borrow Pit.
ϑϑ Plant is on Poodle Creek that joins East Borrow Pit of Sutter Bypass at Mile 16.7N. Figure in parentheses indicates distance along creek from East Borrow Pit.
s Water uaed for irrigation in Sutter Bypass is mainly Feather River return water that enters East and West Borrow Pits via Butte Creek, Butte Slough and Wadsworth Canal.
b Indicates area irrigated is within bypass.
c Of this acreage,105 was reused for duck ponds.
d Combined acreage for Miles 25.OR and 28.4R.
e The 12" unit was a temporary installation during 1957.
f Previously listed as a 12" unit.
g Combined acreage for Miles 7.1N and 88(2.5).
h The acreage listed for Mile 9.99N also received 635 acre-feet of water from Mile 10.ON.
i Additional acre-feet diverted: November 110 and December 93.
j All duck pond lands.
k Additional acre-feet diverted: November 404.
m See plant on Feather River at Mile 38.1R.
n Additional acre-feet diverted: December 83.
p Of this acreage, 15 were reused for duck ponds.
q Additional acre-feet diverted: January 161.
r Of this acreage, 20 were reused for duck ponds.
s Additional acre-feet diverted: December 8 and January 8.
t The 8" unit was a temporary installation during 1957.
u Additional acre-feet diverted: November 1224, December 1464 and January 397.
v All duck refuge lands.
w This acreage was reused for duck ponds.
x The acreage listed for Mile ϑ(2.5R) plant of Epperson, Kennedy and Joaquin received 590 acre-feet of water from Mile ϑ(2.5R) plant of Clara Farrington.
y Of this acreage,5 were reused for duck ponds.
z Additional acre-feet diverted: November 20 and Oecember 1.
aa Additional acre-feet diverted: November 37, December 92 and January 3.
ab Includes acreage as follows: Epperson 235, Middleton 135, W. Nall 105, Madden 98, C. and L. DeWitt 55, M. G. DeWitt 48 and Meyers 47.

TABLE 216

DIVERSIONS AND ACREAGES IRRIGATED - FEATHER RIVER (contd.)
November 1956 through October 1957
(Nov. 1956 through Feb. 1957 - see footnotes)

* Honcut Slough - Plant diverts Feather River water backed into slough. Mouth of Slough is at Mile 43.7L. Distance from Feather River and bank is shown in parentheses.
s Additional acre-feet diverted: November 2.
b Includes 65 acres which also received an undetermined amount of well water.
c Includes 13 acres which also received an undetermined amount of well water.
d New installation in 1957.
e This acreage also received an undetermined amount of well water
f Formerly listed as Farm Land and/or Plumas Mutual Water Company.
g Includes 249 acres which also received an undetermined amount of well water.
h Includes 1147 acres which also received an undetermined amount of well water.
i Includes approximately 231 acres which also received an undetermined amount of well water.
j Replaces a 6" unit.
k Formerly listed as Thomas, Perone, Campisi and Perrucci.
m Previously listed as Mile 31.2R.
n Replaces a 4" unit.
p Previously listed as Mile 33.2L.
q One 3" unit was removed in 1957.
r This is the combined acreage for plant at Mile 38.1R, Sutter Extension Water District diversion at Mile 58.1R and plants on Sutter Bypass, East Borrow Pit, at Mile 10.0N (2.0) and (6.7). This acreage also received an undetermined amount of controlled drainage water.
s Formerly listed as Jesse Frakes.
t Additional acre-feet diverted: January 93.
u Installed prior to 1957. Not previously listed.
v 20 acres listed for Mile 47.4L also received an undetermined amount of water from Mile 47.9L.
w Includes 70 acres which also received an undetermined amount of well water.
x 61 acres listed for Mile 48.0L also received an undetermined amount of water from Mile 48.3L.
y Formerly listed as M.A. Pedroza and Sons.
z Additional acre-feet diverted: November 1, December 1 and January 1.
aa The 5" unit was installed in 1957.
ab Includes 65 acres of Chambers lands.
ac 30 acres of rice listed for Mile 52.1L also received 31 acre-feet of water from Mile 52.2L.
ad Formerly listed as Sutter Butte Canal Company.
ae This is a common point of diversion for Butte Water District, Biggs-West Gridley Water District, Richvale Irrigation District, and Sutter Extension Water District.
af Additional acre-feet diverted: November 186.
ag Includes 650 acres of general crops and 130 acres of rice outside of district.
ah Additional acre-feet of duck water diverted: November 9312, December 9933, and January 815. Includes 1795 acre-feet in September and 6940 acre-feet in October for duck water.

* Diversions shown in this table below the McConnell gaging station are considered as Delta Uplands diversions. Tidal effect ceases at about Mile 3.5.
a This acreage also received an undetermined amount of well water.
b Includes approximately 7 acres of duck clubs.
c Acre-feet diverted: November 187, December 91, and January 45.
d Additional acre-feet diverted: November 29 and December 8.
e This acreage also received an undetermined amount of controlled drainage water and well water.
f New installation in 1957
g Combined acreage for Miles 26.5L and 27.3L.
h Replaces a 5" unit.
i This figure is the diversion entering the District under State Highway 16 and includes an undeterminted amount of spill to the Cosumnes River at Mile 29.9R but does not include the spill above Highway 16.

* Diversions shown in this table below the Woodbridge gaging station are considered as Delta Uplands diversions. Left bank diversions into Reclamation District 348 (below Mile 9.8) and right bank diversions into McCormack-Williamson Tract (below Mile 3.5) are not included since these areas are considered to be within the Delta Lowlands. Tidal effect ceases at about Mile 10.5.
** Mile and bank above New Hope Bridge.
a Additional acre-feet diverted: December 3.
b This acreage also received an undetermined amount of water from Dry Creek.
c Formerly listed as H. C. Braly.
d Replaces a 3" unit.
e Additional acre-feet diverted: January 23 and February 12.
f Additional acre-feet diverted: November 980.
g Includes 5116 acres outside the district.
h This acreage also received an undetermined amount of water from Beaver Slough.
i Formerly listed as Lewis D. Bridge.
j Formerly listed as J. B. Ballantine.
k Additional acre-feet diverted: January 1.
m New installation in 1957.
n Additional acre-feet diverted: January 84 and February 68.
p Formerly listed as P. T. Nakagawa, et al.
q Additional acre-feet diverted: December 5.
r A 5" unit was removed in 1957.
s This acreage also received an undetermined amount of well water.
t Of this acreage, 88 was double cropped.
u Of this acreage, 175 was double cropped.
y Formerly listed as August Knoll.
w Includes 25 acres Graffigna lands.
x Formerly listed as N. D. and D. D. Knoll
y Additional acre-feet diverted: November 2 and December 1.
z Replaces a 10" unit.
aa Additional acre-feet diverted: November 1.
ab Formerly listed as P. L. and V. A. Stabel.

* Diversions shown in this table below the Stockton gaging station are considered as Delta Uplands diversions. Right bank diversions below Mile 2.0 and left bank below Mile 0.7 are not included since they serve areas that are considered to be within the Delta Lowlands. Tidal effect ceases at about Mile 5.0.
** North Slough - North Slough diverts from Calaveras River at Mile 21.6R. Distance from Calaveras River and bank is shown in parentheses.
ð Mormon Slough - Mormon Slough diverts from Calaveras River at Mile 25.3L, and rejoins the river through Stockton Diverting Canal. Distance from Calaveras River and bank is shown in parentheses.
ðð Stockton Diverting Canal - Stockton Diverting Canal diverts from Mormon Slough at Mile ð(13.0) and rejoins the Calaveras River at Mile 5.4L. Distance from Calaveras River and bank is shown in parentheses.
a Additional acre-feet diverted: January 1.
b Acre-feet diverted: November 1.
c This acreage also received an undetermined amount of well water.
d Additional acre-feet diverted: January 9.
e Additional acre-feet diverted: January 15.
f Combined acreage for Mile 11.82L and 11.85L.
g Combined acreage for Mile 11.95L, 12.0L, and 12.05L.
h Combined acreage for Mile 12.1L and 12.15L.
i Combined acreage for Mile 12.35L, 12.5L, and 12.6L.
j Combined acreage for Mile 12.39R and 12.41R.
k Includes 18 acres of V. Freggiaro lands.
m Combined acreage for Mile 12.43R, 12.45R, and 12.5R.
n Formerly listed as William Thrush Estate.
p Replaces a 6" unit.
q Formerly listed as Grattone and Bava.
r Combined acreage for Miles 15.4R and 21.6R (6.1L).
s Installed prior to 1957. Not previously listed.
t Previously listed as John Boggiano.
u New installation in 1957.
v 23 acres listed for Mile 20.3L also received an undetermined amount of water from Mile 20.1L.
w Formerly listed as Bethel Guernsey.
x Formerly listed as Frank O. Rossi.
y Previously listed as Guernsey Ranch.
z The acreage listed for Mile 21.01L also received 19 acre-feet of water from Mile 21.0L.
aa Includes 15 acres which also received an undetermined amount of well water.
ab Additional acre-feet diverted: January 13.
ac 150 acres listed for 21.6R (1.81L) also received an undetermined amount of water from Mile 21.6R (2.6R).
ad Combined acreage for Miles 24.3L and 24.4L.
ae Temporary diversion for replenishing ground water.
af Additional acre-feet diverted: November 6.
ag Formerly listed as C. and F. Sanguinetti.
ah Previously listed as J. Caffese and Sons.
ai Additional acre-feet diverted: December 4.
aj Includes 60 acres which also received an undetermined amount of well water.
ak Includes 8 acres of Antonini lands.
am Includes 13 acres of A. Mignacco lands.
an Replaces an 8" unit.
ap Formerly listed as Dick Wilma.
aq Additional acre-feet diverted: January 19 and February 29.
ar Includes 20 acres which also received an undetermined amount of well water.
as Combined acreage for Mile 29.2R and 29.3L.
at Includes 40 acres of Gill lands which also received an undetermined amount of well water.
au Additional acre-feet diverted: November 1.

* Mileage along Old San Joaquin River from mouth of San Joaquin River 4¼ miles below Antioch.
** Mileage along Tom Paine Slough from its mouth at Mile 54.3L on Old San Joaquin River.
*** Mile and bank above mouth.
8 Holly Sugar Corporation dredger cut joins Tom Paine Slough at Mile 2.1S. Distance along dredger cut and bank is shown in parentheses.
a Rock Slough joins Old San Joaquin River at Mile 30.5L. Pumping plant is located on intake canal which joins Rock Slough.
b Includes 27 acres of G. P. Mercer lands.
c Indian Slough joins Old San Joaquin River at Mile 36.5L. Pumping plant is located on intake canal which joins Indian Slough.
d Additional acre-feet diverted: November 3.
e Additional acre-feet diverted: February 920.
f Includes 15 acres irrigated outside of district. Of this acreage, 1373 was double cropped. This acreage also received 3169 acre-feet of well water.
g Italian Slough joins Old San Joaquin River at Mile 40.9L. Pumping plant is located on intake canal which joins Italian Slough.
h Additional acre-feet diverted: February 461.
i Of this acreage, 712 was double cropped.
j Plant is located on intake canal which joins the Old San Joaquin River at this mile.
k Additional acre-feet diverted: November 45, December 61 and January 11.
m Of this acreage, 90 was double cropped.
n Formerly listed as Emil Hoefer.
p The 8" unit replaced a 5" unit in August, 1957.
q Additional acre-feet diverted: November 1.
r Plant is located on Mountain House Creek which joins the Old San Joaquin River at this mile.
s Additional acre-feet diverted: November 7.
t This acreage also received an undetermined amount of Mountain House Creek water.
u Of this acreage, 70 was double cropped.
v Additional acre-feet diverted: November 5.
w Additional acre-feet diverted: November 76 and February 148.
x This acreage also received 4013 acre-feet of well water. Includes 158 acres of outside contract lands. Of this acreage, 626 was double cropped.
y Additional acre-feet diverted: November 11 and February 13.
z Previously listed as Naglee Burke Irrigation District.
aa Additional acre-feet diverted: February 326.
ab Includes 20 acres irrigated outside of diatrict. Of this acreage, 442 was double cropped.
ac Additional acre-feet diverted: January 62 and February 139.
ad Additional acre-feet diverted: December 643, January 302 and February 73.
ae Of this acreage, 49 was double cropped.
af Additional acre-feet diverted: December 185 and January 253.
ag Acre-feet diverted: December 96.
ah Combined acreage for Miles 8(1.2W) and 8(1.35W). Includes 20 acres which also received an undetermined amount of well water.
ai Previously listed as Mile 8(1.2W).
aj Additional acre-feet diverted: November 397 and December 342. Includes an undetermined amount of water used for industrial purposes.
ak Additional acre-feet diverted: February 23.
am Of this acreage, 40 was double cropped.
an Of this acreage, 60 was double cropped.
ap Additional acre-feet diverted: December 35 and January 20.
aq Additional acre-feet diverted: December 13 and January 2.
ar Additional acre-feet diverted: November 16, December 7 and February 3.
as This acreage was double cropped.

* Mileage along San Joaquin River from its mouth 4½ miles below Antioch.
a Additional acre-feet diverted: January 30.
b Formerly listed as Ivy Ranney.
c Of this acreage, 59 was double cropped.
d Additional acre-feet diverted: November 1, December 2 and January 1.
e This acreage also received an undetermined amount of water from controlled drainage.
f Additional acre-feet diverted: November 1.
g Additional acre-feet diverted: November 19.
h Includes 30 acres which also received an undetermined amount of well water.
i Combined acreage for Miles 49.3R and 49.5R.
j Additional acre-feet diverted: November 7.
k Of this acreage, 12 was double cropped.
m Additional acre-feet diverted: December 1.
n Of this acreage, 52 was double cropped. Includes 52 acres of Vieira lands.
p Of this acreage, 20 was double cropped.
q Formerly listed as J. Burchell Estate.
r Additional acre-feet diverted: December 83 and January 4.
a Includes 30 acres of Nishimura lands.
t Additional acre-feet diverted: November 2, December 8 and January 4.
u Previously listed as Mike Sung.
v Formerly listed as Fred Brandenburg.
w Additional acre-feet diverted: November 25 and December 9.
x Additional acre-feet diverted: November 30 and December 10.
y Additional acre-feet diverted: November 16.
z New installation in 1957.
aa Includes 12 acres of Dewar lands.
ab Additional acre-feet diverted: December 9 and January 3.
ac Replaces a 4" unit.
ad Additional acre-feet diverted: November 11, December 2, January 1 and February 1.
ae Includes an undetermined amount of water returned to river by spill. Additional acre-feet diverted: November 28.
af Of this acreage, 45 was double cropped.
ag Plant is located on Walthall Slough which joins the San Joaquin River at this mile.
ah Additional acre-feet diverted: November 191.
ai This acreage was double cropped.
aj Additional acre-feet diverted: November 24.
ak Of this acreage, 42 was double cropped.
am Of this acreage, 125 was double cropped.
an Additional acre-feet diverted: January 1.
ap Plant is located on Paradise Cut which joins the San Joaquin River at this mile.
aq Additional acre-feet diverted: December 365 and January 103.
ar Additional acre-feet diverted: November 499, December 758 and January 1.
as Additional acre-feet diverted: November 29, December 14, January 27 and February 9.
at Of this acreage, 10 was double cropped.
au Pump is located on old channel which joins the San Joaquin River at this mile.
av Additional acre-feet diverted: December 4 and February 95.
aw Plant is located on intake canal which joins the San Joaquin River at this mile.
ax Additional acre-feet diverted: November 222 and February 378.
ay Includes 811 acres of Banta Irrigated Farms, 599 acres of Kasson District and 1191 acres of outside contracts. Of this acreage, 466 was double cropped. Portions of this acreage received an undetermined amount of well water. This acreage also received 1400 acre-feet of Delta-Mendota Canal water as follows: July 1020 and August 380.
az Replaces a 6" unit.
ba Additional acre-feet diverted: November 3 and December 4.
bb Of this acreage, 189 was double cropped.
bc Of this acreage, 153 was double cropped.
bd Additional acre-feet diverted: November 78, December 63, January 51 and February 48.
be Recreational lakes. Also received an undetermined amount of controlled drainage water.
bf Additional acre-feet diverted: November 33 and December 21.
bg Of this acreage, 225 also received an undetermined amount of controlled drainage water.

a Additional acre-feet diverted: January 20.
b Additional acre-feet diverted: January 44.
c Additional acre-feet diverted: November 45 and December 31. Includes 549 acre-feet received by sub-irrigation.
d Additional acre-feet diverted: November 21 and December 14.
e Additional acre-feet diverted: November 9 and December 6.
f Additional acre-feet diverted: November 21 and December 7.
g Formerly listed as J. O. and S. W. Imeson.
h Additional acre-feet diverted: December 5 and January 5.
i Additional acre-feet diverted: November 135 and December 113
j Combined acreage for two plants at 4/5-28B. This acreage also received an undetermined amount of Woodbridge Irrigation District water and was reused for duck clubs.
k Additional acre-feet diverted: January 25.
m Additional acre-feet diverted: November 93, December 58 and January 6.
n Additional acre-feet diverted: November 6 and December 12.
p Includes 60 acres which also received an undetermined amount of controlled drainage water.
q Additional acre-feet diverted: December 10.
r Formerly listed as Alfred Kuhn.
s One 12" unit was added in 1957.
t Additional acre-feet diverted: January 38.
u Additional acre-feet diverted: November 27, December 33 and January 13.
v Additional acre-feet diverted: November 26 and December 6.
w This acreage was reused for duck ponds.
x Additional acre-feet diverted: November 597, December 1804 and January 710.
y Includes 1406 acres outside district and 370 acres of duck clubs.
z Additional acre-feet diverted: November 64, December 101 and January 14.
aa Of this acreage, 10 was reused for duck clubs.
ab Additional acre-feet diverted: November 28 and December 21.
ac Additional acre-feet diverted: November 7, December 11 and January 5.
ad Additional acre-feet diverted: November 58, December 205 and January 4.
ae Of thia acreage, 40 was reused for duck clubs.
af Additional acre-feet diverted: November 17 and December 9.
ag Formerly listed as B. F. Porter Estate.
ah Includes an undetermined amount of Marsh Creek water.
ai Additional acre-feet diverted: November 31 and December 46.
aj Includes 20 acres of duck ponds.
ak Additional acre-feet diverted: November 3.
am This acreage also received an undetermined amount of Woodbridge Irrigation District water.
an Installed prior to 1957. Not previously listed.
ap This acreage also received an undetermined amount of well water.
aq Acre-feet diverted: November 2 and December 5.
ar Diversion in 1957 was all controlled drainage water.
as Additional acre-feet diverted: November 12.
at Includes 330 acres used for duck clubs.
au 250 acres listed for 6/3-20J also received an undetermined amount of water from 6/3-30D.
av Additional acre-feet diverted: November 17 and January 1.
aw Combined acreage for 6/3-19E and 6/3-30D.
ax Additional acre-feet diverted: November 44, December 143. and January 10.
ay Additional acre-feet diverted: November 20, December 86 and January 63.
az Estimated consumptive use on lands in Delta Uplands considered as sub-irrigated from tidal channels during 1957 without a specific point of diversion.
ba Point of diversion is considered as the control gates at Lambert Road.

* Mileage along San Joaquin River from its mouth 4½ miles below Antioch.
** West Stanislaus Irrigation District Intake Canal. The Intake Canal joins the San Joaquin River at Mile 91.8L. Distance from the San Joaquin River and the bank is shown in parentheses.
8 Pumping plant is located on old channel which joins the San Joaquin River at this mile.
88 Pumping plant is located on drain which joins the San Joaquin River at this mile.
a Additional acre-feet diverted: December 2.
b Of this acreage, 180 was double cropped.
c Of this acreage, 135 was double cropped. Includes 60 acres of Chisholm lands.
d Additional acre-feet diverted: November 45 and December 72.
e Includes 705 acres which received an undetermined amount of controlled drainage water.
f Additional acre-feet diverted: January 2 and February 23.
g Includes an undetermined amount of water returned to river by spill.
h Of this acreage, 43 was double cropped. This acreage also received an undetermined amount of controlled drainage water. Includes 268 acres which also received an undetermined amount of well water.
i New installation in 1957.
j Of this acreage, 40 was double cropped.
k Of this acreage, 400 was double cropped.
m Additional acre-feet diverted: November 477, December 367, January 916 and February 1259.
n This acreage also received 19939 acre-feet of Delta-Mendota Canal water as follows: April 3025, May 576, June 4156, July 7509 and August 4673. Of this acreage, 1633 was double cropped. Includes 1914 acres irrigated outside of district plus 22 acres of Banta Carbona Irrigation District land. Portions of this acreage received an undetermined amount of well water.
p Combined acreage for Miles **(0.7N) and **(1.1N).
q Additional acre-feet diverted: December 8 and January 5.
r Of this acreage, 25 was tripple cropped.
s Of this acreage, 154 was double cropped.
t Replaces a 6" portable unit formerly listed for Miles 93.2L and 93.4L.
u Additional acre-feet diverted: November 25.
v Includes 20 acres which received an undetermined amount of controlled drainage water.
w Additional acre-feet diverted: November 5, December 31, January 14 and February 2.
x Of this acreage, 85 was double cropped.
y Additional acre-feet diverted: December 41.
z Of this acreage, 89 received an undetermined amount of Turlock Irrigation District water.
aa Additional acre-feet diverted: November 16, December 3, January 6 and February 41.
ab Of this acreage, 25 was double cropped.
ac This acreage was double cropped.
ad Of this acreage, 78 was double cropped and 825 received an undetermined amount of well water.
ae Additional acre-feet diverted: November 120 and December 380.
af Of this acreage, 2298 was double cropped and 52 received an undetermined amount of well water. This acreage also received an additional 2972 acre-feet of Delta-Mendota Canal water as follows: April 592, May 409, June 483, July 560, August 508, September 347 and October 73.
ag Additional acre-feet diverted: November 1.
ah Of this acreage, 557 was double cropped.
ai This acreage also received an undetermined amount of Turlock Irrigation District water.
aj Of this acreage, 160 was double cropped.
ak Additional acre-feet diverted: November 2.
am Formerly listed as A. J. Silveira.
an Additional acre-feet diverted: February 80.
ap Additional acre-feet diverted: February 55.
aq Includes 100 acres which also received an undetermined amount of Central California Irrigation District water.
ar Additional acre-feet diverted: November 13, December 75 and January 58.
as Of this acreage, 63 was double cropped.
at Plant no longer diverts San Joaquin River water and will not be listed in subsequent reports.

* Mileage along San Joaquin River from its mouth 44 miles below Antioch.
** Plant is located on Sand Slough which diverts from San Joaquin River at Mile 168.4R. Distance from San Joaquin River and bank shown in parentheses.
8 Plant is located on Fresno Slough which diverts from San Joaquin River at Mile 209.0L. Distance from San Joaquin River and bank shown in parentheses.
88 Plant is located on James Bypass which diverts from Fresno Slough at Mile 8(11.80R). Distance from Fresno Slough and bank shown in parentheses.

a This acreage also received an undetermined amount of controlled drainage and East Side Canal Company water.
b 324 acres listed for Mile 161.9R also received an undetermined amount of water from Mile 161.4R.
c This acreage also received an undetermined amount of well water.
d Previously listed as Mile 162.8R.
e This is a portable unit which diverts water at Miles 162.9R and 163.2R.
f New installation in 1957.
g Plant is located on East Side Canal which joins the San Joaquin River at this mile.

TABLE 228

DIVERSIONS AND ACREAGES IRRIGATED - SAN JOAQUIN RIVER (Fremont Ford Bridge to Gravelly Ford) (contd.)
November 1956 through October 1957

h Temporary installation for 1957.
i Installed prior to 1957. Not previously listed.
j Point of diversion is at head of Temple Slough.
k Formerly listed as Antone Zaninovich.

m Main canal, also includes outside canal and Helm ditch.
n Data furnished by U.S. Bureau of Reclamation.
p Includes diversion by Mendota Pool pumps, Mowry pumps and gravity diversion in Lone Willow Slough.

* Mileage along San Joaquin River from its mouth 4½ miles below Antioch.
** Point of diversion and place of use is on island in midstream.
a This acreage was double cropped.
b Installed prior to 1957. Not previously listed.
c One 4" unit was a temporary installation for 1957.
d This acreage also received an undetermined amount of well water.
e Includes 5 acres of Morello Winery lands.
f This acreage also received an undetermined amount of Fresno Irrigation District water.
g Of this acreage, 39 was double cropped. This acreage also received an undetermined amount of Madera Irrigation District water.
h Previously listed as C. L. Hammer.
i Includes 9 acres which also received an undetermined amount of Madera Irrigation District water.
j Formerly listed as Jasper Ranch.
k Includes 2 acres which also received an undetermined amount of well water.
m Formerly listed as Fred Russell.
n Formerly listed as Greiner and Wright.
p Of this acreage, 45 was double cropped.
q 23 acres listed for Mile 255.93R also received an undetermined amount of water from Mile 256.52R.
r Of this acreage, 30 was double cropped.
s Includes 35 acres of J. H. Cobb lands. Of this acreage, 35 was double cropped.
t Combined acreage for Miles 258.80L and 258.90L.
u Of this acreage, 26 was double cropped.
v Temporary installation for 1957.
w 17 acres listed for Mile **261.75 also received 4 acre-feet of water from Mile **261.60 and were double cropped.
x Includes 34 acres which also received an undetermined amount of well water.
y New installation in 1957.
z 15 acres listed for Mile 262.27L also received an undetermined amount of water from Mile 262.32L.
aa Includes 38 acres which also received an undetermined amount of well water.
ab 20 acres listed for Mile 263.40R also received an undetermined amount of water from Mile 262.60R.
ac 15 acres listed for Mile 264.08L also received 3 acre-feet from Mile 263.94L.
ad Plant is located on pond.
ae San Joaquin River water was not diverted into pond in 1957.

DIVERSIONS AND ACREAGES IRRIGATED - MERCED RIVER (contd.)
November 1956 through October 1957
(Nov. 1956 through Feb. 1957 - see footnotes)

a Of this acreage, 270 was double cropped
b Additional acre-feet diverted: December 2 and February 2.
c Of this acreage, 155 was double cropped.
d Additional acre-feet diverted: November 7.
e Additional acre-feet diverted: November 5.
f Additional acre-feet diverted: November 27.
g Additional acre-feet diverted: November 6 and December 6.
h Of this acreage, 271 was double cropped.
i Additional acre-feet diverted: November 37 and December 4.
j Of this acreage, 35 was double cropped. Includes 1075 acrea which also received an undetermined amount of East Side Canal water.
k Of this acreage, 20 waa double cropped.
m Of this acreage, 30 was double cropped.
n Additional acre-feet diverted: November 15.
p Of this acreage, 34 was double cropped.
q Additional acre-feet diverted: November 15, December 2 and February 1.
r Of this acreage, 101 was double cropped.
s Additional acre-feet diverted: November 2.
t Additional acre-feet diverted: November 19.
u Of this acreage, 86 was double cropped.
v Additional acre-feet diverted: November 45, December 5 and January 4.
w Of this acreage, 120 waa double cropped.
x Additional acre-feet diverted: November 7 and December 9.
y Additional acre-feet diverted: December 28.
z Combined acreage for Miles 11.6L, 12.35L and 12.85L.
aa Of this acreage, 12 was double cropped.
ab This acreage was double cropped.
ac Additional acre-feet diverted: November 204 and December 73.
ad Of this acreage, 29 was double cropped.
ae Additional acre-feet diverted: November 104 and December 129.
af This acreage also received an undetermined amount of well water.
ag Additional acre-feet diverted: November 8 and December 1.
ah Includes 16 acres of McKelvey lands.
ai Additional acre-feet diverted: December 2.
aj Of this acreage, 2 was double cropped.
ak Additional acre-feet diverted: November 1.
am Of this acreage, 18 was double cropped.
an Additional acre-feet diverted: December 4.
ap Of this acreage, 15 waa double cropped.
aq Additional acre-feet diverted: December 1.
ar Formerly listed as A. C. Jorgensen.
as Of this acreage, 58 was double cropped.
at Formerly listed as Helena McConnell.
au Formerly combined with Mile 23.0L.
av Additional acre-feet diverted: November 8 and December 7.
aw Of this acreage, 26 was triple cropped.
ax This acreage was triple cropped.
ay Additional acre-feet diverted: November 3 and December 2.
az Additional acre-feet diverted: January 1 and February 1.
ba Of this acreage, 19 was double cropped.
bb Additional acre-feet diverted: February 25.
bc Additional acre-feet diverted: February 26.
bd Formerly listed as P. Malaria.
be Replaces an 8" unit.
bf 238 acres listed for Mile 36.9L also received 543 acre-feet of water from Mile 32.3L.
bg Of this acreage, 45 was double cropped.
bh Formerly listed as W. F. Bettencourt, P. Malaria and Cowel Land and Cement Company.
bi Of this acreage, 50 was double cropped.
bj This acreage also received an undetermined amount of Merced Irrigation District Water.

u Of this acreage, 33 was double cropped.
v Formerly liated aa E. Behlen and F. Upchurch.
w This acreage was double cropped.
x Includes an undetermined amount of water returned to river by spill.
y Includes 237 acres which also received an undetermined amount of Modeato Irrigation District water.
z Of this acreage, 35 waa double cropped.
aa Additional acre-feet diverted: November 10 and December 4.
ab Includes 138 acres which also received an undetermined amount of controlled drainage water and 273 acres which also received an undetermined amount of well water.
ac Oakdale Irrigation District maintained plants during 1957 season at Miles 37.7L and 39.1L to supplement direct gravity supply.
ad Of this acreage, 138 was double cropped.
ae This acreage also received an undetermined amount of water from the diatrict gravity diversion at Mile 58.6.
af Of this acreage, 150 was double cropped.
ag Additional acre-feet diverted: December 2.
ah Previously listed as J. S. Harden.
ai Additional acre-feet diverted: December 9.

e Mileage downstream from junction with South Fork Tule River.
a Includes 460 acre-feet of spill to Porter Slough at Mile 3.7R below head as follows: January-April, no record, May 164, June 53, July 3 and October 1.
b This acreage also received an undetermined amount of well water.
c Installed prior to 1957. Not previously listed.
d Includes an undetermined amount of water served to Vandalia Irrigation District and Porterville State Hospital well fields.
e Point of diversion is on Porter Slough 4.5 miles below head.
f This acreage also received an undetermined amount of water from wells and Friant-Kern Canal.
g 60 acres listed for Porter Slough Ditch also received an undetermined amount of water from Pioneer Ditch.
h This acreage also received an undetermined amount of water from wells and Campbell-Moreland Ditch via well fields.
i Includes acreage as follows: Porterville Irrigation District 3053, Lower Tule River Irrigation District 1598 and Saucelito Irrigation District 360.
j Includes 1613 acre-feet of spill to Tule River at Mile 12.9R as follows: February 225, March 271, April 415, May 412 and June 290.
k Includes 1688 acres in the Hubbs-Miner Ditch Company and 273 acres in the Gilliam-McGee Ditch Company.

TABLE 238

DESCRIPTION OF ACTIVE SALINITY OBSERVATION STATIONS - 1957

Station	Miles from Golden Gate (a)	Time Interval (b)		Location
		Hours	Mins.	
				SAN FRANCISCO, SAN PABLO, AND SUISUN BAYS
Point Orient	12.3	2	20	North end of San Francisco Bay, east shore, one-half mile south of Point San Pablo Wharf of Standard Oil Company.
Point Pinole	19.0	2	50	South shore of San Pablo Bay, at Point Pinole on wharf of Atlas Powder Company.
Point Davis	25.2	3	15	East end San Pablo Bay, south shore, Oleum Wharf of Union Oil Company.
Grand View	25.2	3	15	Northwest shore of San Pablo Bay at mouth of Petaluma Creek.
Crockett	27.7	3	30	West end of Carquinez Strait, south shore, 0.2 mile east of Carquinez Bridge on wharf of C. and H. Sugar Refining Corporation.
Benicia	32.5	3	50	East end of Carquinez Strait, north shore, 1.1 mile west of Southern Pacific Company railroad bridge at Benicia Arsenal.
Martinez	32.7	3	50	East end of Carquinez Strait, south shore, 1.0 mile west of Southern Pacific Company railroad bridge at Municipal Ferry Slip. (Bulla Head Point.)
West Suisun	37.0	4	10	West end of Suisun Bay, north shore, 2.5 miles northeast of Southern Pacific railroad bridge at service pier of U. S. Maritime Commission, Reserve Fleet mooring area.
Innisfail Ferry	47.3	4	50	Montezuma Slough, about one mile east of junction with Cutoff Slough near north end of Grizzly Island.
Port Chicago	41.0	4	20	South shore of Suisun Bay at U. S. Naval ammunition loading wharf below Port Chicago.
O & A Ferry (c)	46.5	4	40	Upper end Suisun Bay between Mallard Station and Chipps Island at Sacramento Northern Railroad Ferry Crossing.
Pittsburg	48.0	5	00	East end of Suisun Bay, south shore, at Pittsburg Yacht Harbor.
				SACRAMENTO RIVER DELTA
Collinsville	50.8	5	25	Sacramento River, north bank at junction with San Joaquin River.
Emmaton	57.6	5	45	Sacramento River, south bank, 5.9 miles downstream from Rio Vista.
Threemile Slough Bridge	60.0	5	55	At junction of Slough and Sacramento River.
Rio Vista Bridge	63.5	6	05	At highway bridge near northerly limits of Rio Vista.
Isleton Bridge	68.7	6	30	Sacramento River, one mile upstream from Isleton.
				SAN JOAQUIN RIVER DELTA
Antioch	54.9	5	55	San Joaquin River at City Water Works pumping plant.
Antioch Bridge	58.2	6	10	South shore San Joaquin River at Antioch Bridge.
Jersey Island	61.4	6	20	San Joaquin River, left bank, one mile below mouth of False River.
Threemile Slough	64.2	6	30	Threemile Slough, west bank, of junction of slough with the San Joaquin River.
Oulton Point	67.2	6	40	San Joaquin River, right bank, three miles upstream from junction of Threemile Slough.
San Andreas Landing	70.3	6	55	San Joaquin River, right bank, one mile below the mouth of the Mokelumne River.
Opposite Central Landing	72.0	7	00	Mokelumne River on Andrus Island directly opposite Central Landing on Bouldin Island.
Dutch Slough	73.0	7	05	At Bethel Island Bridge.
Webb Ferry	68.0	6	40	False River at junction with Fisherman's Cut.
East Contra Costa I. D.	86.7	8	20	Indian Slough at East Contra Costa Irrigation District Pumping Plant.
Clifton Court Ferry	94.2	9	10	Old River just below junction with Grant Line Canal.
Mossdale Bridge	108.5	10	50	San Joaquin River at U. S. 50 Highway crossing about three miles southwest of Lathrop.
Vernalis	127.0	11	00	San Joaquin River at Durham Ferry Bridge above tidal influence.

a Mileage measured to station along main channel. For stations off the main channel, the mileage shown is the same distance along the main channel to a point whereon the time of the occurrence of the tidal phase is the same as that of the observation station.
b Time interval between high tide at Golden Gate and time for taking samples at station.
c Effective April 28, 1957, samples were taken from Spoonbill Creek at railroad crossing.

* Estimated.
a Releases of stored water from Shasta Lake commenced in 1944.
b Releases of stored water from Folsom Reservoir commenced in 1956.
c Average taken as mean annual unimpaired flow at foothill stations of major tributaries for 50-year period October 1905 through September 1955.
d For location see Table 238.
e Record incomplete.
f Taken from Spoonbill Creek at railroad crossing.

h Taken two hours early.
i Taken from Spoonbill Creek at railroad crossing.

TABLE 241

RECORDING TIDE GAGES IN SACRAMENTO-SAN JOAQUIN DELTA AND SUISUN BAY

Name of Station	Operated by*	Location	Date Installed
		Sacramento Delta	
Clarksburg	DWR	Right bank of Sacramento River at American Crystal Sugar Company dock.	1936
Collinsville	DWR	Right bank of Sacramento River on pile dolphin about 0.1 mile upstream from junction of Main Street and river.	June 1929
Freeport	USGS	Right bank of Sacramento River 2.5 miles above Freeport.	Aug. 1955
Isleton	USBR	Left bank of Sacramento River at Shell Oil Company docks at junction of Highway 12 and 24 in Isleton.	April 1949
Rio Vista	USCE	Right bank of Sacramento River at U. S. Engineers depot below Rio Vista; about 1½ miles below Rio Vista Bridge.	April 1908
Snodgrass Slough	DWR	Left bank of Sacramento River about 0.1 mile above Hollister Landing and about ¼ mile above head of Snodgrass Slough (now leveed off).	Aug. 1939
Threemile Slough (Sacramento)	DWR	Pile dolphin about 0.1 mile from Threemile Slough Bridge on Brannon Island site.	April 1929
Walnut Grove	DWR	Left bank of Sacramento River at head of Georgiana Slough; lower end of town of Walnut Grove.	Feb. 1929
		Mokelumne Delta	
Georgiana Slough	DWR	On Andrus Island near junction of Georgiana Slough and Mokelumne River.	June 1929
New Hope	DWR	Right bank of south fork of Mokelumne River just below New Hope Bridge.	Aug. 1920
		Yolo Bypass	
Liberty Island	DWR	Right bank of dredger cut separating Little Holland and Liberty Island. One-half mile north of Yolo-Solano County line.	1930
Lindsay Slough	DWR	South bank of Lindsay Slough ½ mile west of Wright Cut. At Montezume Ranch headquarters of California Packing Corporation.	Jan. 1942
Lisbon	DWR	Left bank of Yolo Bypass 500 feet below east end of Sacramento Northern Railroad trestle.	1920
West Cut at Five Points	USCE	Left bank of West Cut above junction with Minor Slough approximately 750 feet north of Five Points Resort.	Oct. 1957
		San Joaquin Delta	
Antioch	DWR	On wharf of Antioch Water Works.	June 1929
Brandts Bridge	USBR	Right bank of San Joaquin River at Brandts Bridge between Roberts Island and Reclamation District 17.	July 1940
Burna Cut-Off	USBR	On Stockton Ship Channel at East Bay Municipal Utility District crossing; northwest corner of Rough and Ready Island.	May 1940
Delta Cross Channel	USBR	Left bank approximately 1000 feet below head near Walnut Grove.	Sept. 1952
Grant Line Canal	USBR	Right bank of Grant Line Canal at Tracy Road crossing.	Oct. 1940
Middle River at Bacon Island	USBR	Most northeasterly point of Bacon Island at junction of Middle River and Connection Slough.	Oct. 1948
Middle River (Borden Hwy.)	DWR	Left bank of Middle River just below Borden Highway Bridge on Victoria Island.	July 1939
Middle River (Mowry Bridge)	USBR	Right bank Middle River at Undine Road crossing on upper Roberts Island.	July 1948
Mossdale Bridge	DWR	Right bank of San Joaquin River just below U. S. 40 highway crossing.	1920
Old River at Clifton Court Ferry	USBR	Left bank approximately 2000 feet downstream from junction with Grant Line Canal.	Dec. 1948
Old River at Holland Tract	USBR	Left bank about 1½ miles south of northeast corner of Holland Tract.	Sept. 1951
Old River at Mansion House	DWR	Right bank on timber dolphin at Mansion House on Victoria Island.	Aug. 1939
Old River near Rock Slough	DWR	Left bank of Old River 1½ miles north of junction with Rock Slough on American Island.	Mar. 1945
Old River near Tracy Road Bridge	DWR	Left bank at Galli'a Pump, Mile 53.0. About 1000 feet upstream from Tracy Road Bridge.	Mar. 1952
Rindge Pump	DWR	At southeast corner of Rindge Tract on Fourteenmile Slough at junction with Ship Channel.	July 1939
Rock Slough	USBR	On Contra Costa Canal intake approximately 1½ miles northeast of Knightsen. (No record: February to December 1946).	Oct. 1944
San Andreas Landing	USBR	On right bank of San Joaquin River approximately 1¼ miles downstream from junction of Mokelumne River.	May 1952
Stockton	USCE	At head of McLeod Lake on Center Street.	Dec. 1927
Tom Paine Slough	DWR	At mile 2.2 above mouth (0.1 mile east of mouth of Sugar Cut).	June 1951
Threemile Slough (San Joaquin)	DWR	On Sherman Island at Reclamation District 341 drainage plant on pile dolphin. Near junction of Slough with San Joaquin River.	June 1929
Venice Island	USCE	At Blakes Landing on Stockton Ship Channel near Venice Island headquarters.	Jan. 1928
		Suisun Bay	
Benicia	DWR	North side of Suisun Bay. On Benicia Arsenal wharf.	ð April 1940

* DWR - Department of Water Resources; USGS - U. S. Geological Survey; USBR - U. S. Bureau of Reclamation; USCE - U. S. Corps of Engineers.

ð Gage originally installed June 1929 and operated until October 1931 by Department of Water Resources. In interim 1931 to April 1940, recorders were operated here at intervals by U. S. Corps of Engineers and U. S. Coast and Geodetic Survey.

STATION DESCRIPTION

Sacramento River at Keswick

U. S. Geological Survey Station on right bank of Sacramento River, 0.6 mile downstream from Keswick Dam, about four miles northwest of Redding. Continuous water stage recorder and staff gage with zero set at elevation 479.81 feet, U.S.G.S. Datum. Period of continuous record, 1942 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, at a temporary site one and one-half miles upstream, 47.2 feet and 186,000 second-feet February 28, 1940, which corresponds to a stage of approximately 44.0 feet at the present site. Formerly presented as station number 1 in Flood Flows and Stages series of reports. Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Clear Creek near Igo

U. S. Geological Survey station on left bank of Clear Creek at the Redding-Igo highway bridge one mile northeast of Igo. Continuous water stage recorder and staff gage at an altitude of about 700 feet. Rating curve extended for flows in excess of 12,000 second-feet by velocity-area studies. Period of record 1940 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, 13.75 feet and 24,500 second-feet, December 21, 1955. Formerly presented as station number 2 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Cottonwood Creek near Cottonwood

U. S. Geological Survey station on right bank of Cottonwood Creek two miles east of Cottonwood. Continuous water stage recorder and staff gage at an altitude of about 370 feet. Rating curve extended for flows in excess of 30,000 second-feet. Period of record, 1940 to date. Discharge published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge 15.4 feet and 52,300 second-feet, March 1, 1941. Formerly presented as station number 3 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Battle Creek near Cottonwood

U. S. Geological Survey station on left bank of Battle Creek nine miles east of Cottonwood. Continuous water stage recorder and staff gage with zero set at elevation 421.47 feet, U.S.G.S. Datum. Period of record 1940 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum known stage established from flood marks, 15.8 feet, December 11, 1937. Maximum recorded stage and discharge, 11.85 feet and 12,800 second-feet, February 6, 1942. Formerly presented as station number 4 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River near Red Bluff

U. S. Geological Survey station on left bank of Sacramento River at lower end of Iron Canyon, one-half mile downstream from the mouth of Sevenmile Creek and 4.6 miles northeaat of Red Bluff. Continuous water stage recorder and ataff gage with zero set at elevation 253.18 feet, U.S.O.S. Datum. Department of Water Reaources maintains an automatic short wave radio water stage recorder at this atation. Rating curve extended for flows in excess of 200,000 second-feet by means of velocity-area studies and logarithmic plotting. Feriod of record, 1895 to date. Frior to January 1902 this station was located 7.4 miles upatream at site of Jellys Ferry. Discharges published in U.S.O.S. Water Supply Papers. Maximum recorded stage and discharge, 38.9 feet and 291,000 second-feet, February 28, 1940. Formerly published as Sacramento River near Red Bluff (Iron Canyon), atation number 5 in Flooa Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Red Bluff

U. S. Weather Bureau station on Sacramento River Bridge near left bank on downstream side of Highway 99 E at Red Bluff. Wire weight and staff gages with zero (low water mark of 1876) set at elevation 236.89 feet, U.S.C.S. Datum. Period of record, 1878 to date. Stages published in reports of U. S. Weather Bureau. Highest recorded stage, 32.2 feet, February 28, 1940. Formerly presented as station number 6 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Antelope Creek near Red Bluff

U. S. Geological Survey Station on right bank of Antelope Creek 6.5 miles east of Red Bluff. Continuous water stage recorder and staff gage at an altitude of about 340 feet. Period of record, 1940 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, 13.9 feet and 10,400 second-feet, February 6, 1942, at original site. Maximum recorded stage and discharge at present site, 12.43 feet and 11,500 second-feet, February 22, 1955. Maximum stage of about 22 feet as taken from flood of December 1937. Formerly presented as station number 7 in Flood Flows and Stages series of reports. Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Mill Creek near Los Molinos

U. S. Geological Survey station on right bank of Mill Creek five miles northeast of Los Molinos. Continuous water stage recorder and staff gage at an altitude of about 420 feet. Rating curve extended for flows in excess of 3,900 second-feet by slope area studies. Period of record 1928 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum observed stage and discharge, 23.4 feet and 23,000 second-feet (from rating curve extended above 3,900 c.f.s. on basis of slope area studies), December 11, 1937. Formerly presented as station number 8 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Thomes Creek at Paskenta

U. S. Geological Survey station on left bank of Thomes Creek one-half mile upstream from Paskenta. Continuous water stage recorder and staff gage at an altitude of about 750 feet. Staff gage only, 1920 to 1930, at Paskenta, one-half mile below present site. Water stage recorder and staff gage, 1930 to 1942, at a point 1,000 feet upstream from present site. Period of record October to December 1920 (gage height only), January 1921 to date. Rating curves extended for flows in excess of 7,000 second-feet for all three sites. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge at original site, 10.5 feet and 16,600 second-feet, March 26, 1928. Maximum recorded stage and discharge at site used from 1930 to 1942, 16.8 feet and 16,500 second-feet, December 10, 1937. Maximum recorded stage and discharge at present site 12.14 feet and 23,500 second-feet, December 21, 1955. Formerly presented as station number 9 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Deer Creek near Vina

U. S. Geological Survey station on left bank of Deer Creek nine miles northeast of Vina and 0.8 mile upstream from a concrete diversion dam. Continuous water stage recorder and staff gage at an altitude of about 480 feet. Rating curve extended for flows in excess of 7,000 second-feet. Periods of record, 1911 to 1915, 1920 to 1937 and 1939 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, 19.2 feet and 23,800 second-feet, December 10, 1937. Formerly presented as station number 10 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Vina Bridge

U. S. Bureau of Reclamation station maintained by Department of Water Resources on right bank of Sacramento River 50 feet upstream from Vina Bridge. Continuous water stage recorder and staff gage with zero set at elevation 100 feet, U.S.E.D. Datum. Period of record 1945 to date. Stages since 1950 published in reports of Department of Water Resources. Maximum recorded stage and discharge, 87.7 feet and 146,000 second-feet, December 28, 1951. Pormerly presented as station number 10A in Plood Plows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Hamilton City

D. S. Bureau of Reclamation station maintained by Department of Water Resources on the left bank of Sacramento River one mile northeast of Hamilton City. Prior to October 1945, U. S. Weather Bureau staff gage only with zero set at elevation 127.9 feet, U.S.E.D. Datum. Gage and recorder subsequently set on U.S.E.D. Datum. Period of record 1927 to date. This station was destroyed January 15,1956 and rebuilt June 19, 1956. Stages published in reports of U. S. Weather Bureau and Department of Water Resources. Highest recorded stage, 22.8 feet (150.7 feet, U.S.E.D. Datum), December 11, 1937. Maximum estimated discharge, 350,000 second-feet, February 28, 1940, with a stage of 22.6 feet (150.5 feet, U.S.E.D. Datum). Formerly presented as station number 11 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Big Chico Creek near Chico

U. S. Geological Survey station on right bank of Chico Creek seven miles northeast of Chico. Continuous water stage recorder and staff gage with zero set at elevation 300 feet, U.S.G.S. Datum from topographic map. Rating curve extended by means of velocity-area studies for flows in excess 5,000 second-feet. Discharges published in U.S.G.S. Water Supply Papers. Period of record, 1930 to date. Maximum recorded stages and discharge 16.6 feet and 8,260 second-feet, December 10, 1937 (site and datum then in use). Formerly published as Chico Creek near Chico, station number 12 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Stony Creek near Hamilton City

U. S. Geological Survey station on right bank of Stony Creek 2.3 miles southwest of Hamilton City. Continuous water stage recorder and staff gage with zero set at an altitude of about 150 feet. This station was moved during February 1946 from a location three miles upstream with zero of gage set at elevation 186.61 feet, U.S.E.D. Datum of 1929. Prior to November 1944 zero of gage was set at elevation 188.11, U.S.E.D. Datum. Rating curves extended for flows in excess of 30,000 second-feet. Period of record 1941 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, 6.35 feet and 37,500 second-feet March 1, 1941 at former site. Maximum recorded stage and discharge at present site, 15.96 feet and 22,100 second-feet, December 22, 1955 Formerly presented as station number 13 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Stony Creek at St. John

U. S. Weather Bureau station near right bank of Stony Creek on downstream side of highway bridge at St. John. Staff gage with zero set at elevation 136.9 feet, U.S.E.D. Datum. Measurements during floods obtained on auxiliary staff gage located near left bank on upstream side of bridge. Period of record 1906 to date. Stages published in reports of U. S. Weather Bureau. Highest recorded stage, 13.9 feet, February 28, 1940. Formerly presented as station number 14 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River at Ord Ferry

Department of Water Resources station on right bank of Sacramento River at Ord Ferry. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Department of Water Resources maintains an automatic short wave radio water stage broadcaster at this station. A relationship has been established between stages at this station and total flows entering the Sacramento River Flood Control Project near Chico Landing, including the total flow in Sacramento River below the mouth of Stony Creek and in nearby sloughs out of the main River channel into Butte Basin. Period of record, 1921 to 1927 and 1937 to 1944 during flood seasons only. Continuous record, 1944 to date. Maximum recorded stage and discharge 121.7 feet and 370,000 second-feet, February 28,1940. Formerly presented as station number 15 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Butte City

U. S. Geological Survey and Department of Water Resources cooperative station on left bank of Sacramento River 0.5 mile south of Butte City, about 200 feet upstream from the State highway bridge. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Prior to December 1930 this station was located 0.5 mile upstream on same datum. Discharges from 1921 to date (summer flows only 1921 to 1940) published in U.S.G.S. Water Supply Papers. Flood season stages from 1929 to date presented in reports of Department of Water Reaources. Maximum recorded atage and discharge, 96.9 feet and 170,000 second-feet, February 7, 1942. Formerly presented as station number 16 in Plood Flows and Stages series of reports.

Note: No measurements are included; for corresponding dischargea see stream flow table for this station.

STATION DESCRIPTION

Sacramento River opposite Moulton Weir

Department of Water Resources station previously located on right bank of Sacramento River at Gordon Ranch pumping plant, one-quarter mile upstream from Moulton Weir, has been moved one-quarter mile downstream opposite Moulton Weir, December 1955. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Flood season stages from 1922 to date published in reports of Department of Water Resources. Maximum recorded stage, 85.5 feet, February 7, 1942. Formerly published as Sacramento River at Gordon Pump, station number 17 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Colusa Weir from Sacramento River to Butte Basin

U. S. Department of the Army and Department of Water Resources cooperative station on left bank of Sacramento River at upstream end of Colusa Weir. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Crest of weir at elevation 61.8 feet. Flows over weir have been measured by current meter. Ratings vary with stages in Butte Basin. Stages from 1935 to date during periods of flow over weir published in reports of Department of Water Resources. Maximum recorded stage 70.6 feet, March 1, 1940. Formerly published as Sacramento River at Colusa Weir, station number 19 in Flood Flows and Stages series of reports.
Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Colusa

U. S. Geological Survey and Department of Water Resources cooperative station on right bank of Sacramento River immediately downstream from Colusa Bridge. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Department of Water Resources maintains an automatic short wave radio water stage broadcaster at this station. (Prior to October 1945, U. S. Weather Bureau maintained a wire weight and staff gage on Colusa Bridge with zero set at elevation 40.45 feet, U.S.E.D. Datum. D.W.R.-U.S.G.S. gages reset on U.S.E.D. Datum during that month.) Records available on D.W.R.-U.S.G.S. gage from 1921 to date and published in reports of both agencies. Staff gage readings on one gage or the other published in river stage reports of U. S. Weather Bureau from 1893 to date. Maximum recorded stage and discharge, 69.8 feet and 54,000 second-feet, March 1, 1940. Formerly presented as station number 20 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Butte Slough Outfall Gates

Department of Water Resources station on left bank of Sacramento River at Butte Slough Outfall Gates 4.4 miles upstream from Meridian. Staff gage set on U.S.E.D. Datum, read daily by Butte Slough Irrigation Company, Ltd. Period of record 1936 to date. Stages published in reports of Department of Water Resources. Highest observed stage, 65.4 feet, February 29, 1940. Formerly presented as station number 21 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River at Meridian

Department of Water Resources station on downstream end of middle fender of Sacramento Northern Railway Bridge across Sacramento River at Meridian. Continuous water stage recorder and staff gage installed in 1943 set on U.S.E.D. Datum. Period of record 1915 to date. Records published in reports of Department of Water Resources. Highest observed stage 64.4 feet, March 1, 1940. Formerly presented as station number 22 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Tisdale Weir from Sacramento River to Sutter Bypass

U. S. Department of the Army and Department of Water Resources cooperative station on left bank of Sacramento River at north end of Tisdale Weir. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Crest of weir at elevation 45.45 feet. Flows over weir rated by measurements. Ratings vary with stages in Sutter Bypass. Period of record, 1935 to date. Stages during periods of flow over weir published in reports of Department of Water Resources. Maximum recorded stage, 53.3 feet, March 1, 1940. Formerly published as Sacramento River at Tisdale Weir, station number 24 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Tisdale

Department of Water Resources station on left bank of Sacramento River, 1,000 feet downstream from Tisdale Weir at pumping plant of Sutter Mutual Water Company. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Period of record, 1925 to date. Records published in reports of Department of Water Resources. Maximum recorded stage, 53.5 feet, March 1, 1940. Department of Water Resources receives stage reports by telephone daily from observer at this station. Formerly presented as station number 25 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River below Wilkins Slough

U. S. Geological Survey and Department of Water Resources cooperative station on right bank of Sacramento River, 2,000 feet downstream from R.D. No. 108 irrigation pumping plant. Continuous water stage recorder and staff gage set on U.S.E.O. Datum. Records available from 1931 to date and published in D.W.R. and U.S.G.S. reports. Maximum recorded stage and discharges, 52.8 feet and 28,000 second-feet, March 1, 1940. Formerly presented as station number 26 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Knights Landing

U. S. Geological Survey and Oepartment of Water Resources cooperative station on left bank of Sacramento River immediately upstream from Southern Pacific Railroad Bridge. Continuous water stage recorder and staff gage set on U.S.E.D. Datum which is minus 3.05 U.S.G.S. Datum. (U. S. Weather Bureau maintained a staff gage on Southern Pacific Railroad Bridge with zero set at elevation 19.7 feet, U.S.E.D. Datum, from 1904 to 1932, and at 7.65 feet, U.S.E.D. Datum, from 1932 to October 1945.) Records available on D.W.R.-U.S.G.S. gage from 1921 to date and published in reports of both agencies. Station rated in conjunction with gage heights at Fremont Weir at West End to adjust for backwater effects from Feather River and Sutter Bypass. Staff gage readings on U. S. Weather Bureau gage have been published in river stage reports of that agency from 1904 to 1957. Maximum recorded stage, 41.8 feet, U.S.E.D. Datum corresponding to a discharge of 27,000 second-feet, February 8, 1942. Maximum recorded discharge 27,800 second-feet, December 24, 1955, corresponding to a stage of 39.6 feet. Formerly presented as station number 28 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding dischargee see stream flow table for this station.

STATION DESCRIPTION

Butte Creek near Chico

U. S. Geological Survey and Department of Water Resources cooperative station on right bank of Butte Creek 0.8 mile downstream from Little Butte Creek and 7.5 miles east of Chico. Continuous water stage recorder and staff gage at an altitude of about 350 feet. Prior to 1944 station was located one-quarter mile upstream from present site at different datum. Rating curve extended for flows in excess of 6,000 second-feet by logarithmic plotting. Period of record, 1930 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, 13.35 feet and 18,700 second-feet, December 22, 1955, at present site; 18.9 feet and 17,000 second-feet, December 11, 1937, at original site. Formerly presented as station number 29 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Butte Slough to Sacramento River

Department of Water Resources station on Butte Slough at outfall gates to Sacramento River 4.4 miles northerly from Meridian. Continuous water stage recorder set on U.S.E.D. Datum. Period of record 1924 to date. Stages published in reports of Department of Water Resources. Highest observed stage, 68.9 feet, February 29, 1940. Formerly published as Butte Slough at Outfall Gates, station number 30 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Wadsworth Canal to Sutter Bypass

Department of Water Resources station near middle of the downstream side of Butte House Road bridge across Wadsworth Canal. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Period of record 1929 to date. Station rated by means of measurements for low and medium flows. Flood flows affected by backwater from Sutter Bypass. Stages published in reports of Department of Water Resources. Highest recorded flood stage, 54.75 feet, February 8, 1942. Formerly published as Wadsworth Canal at Butte House Road, station number 34 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Feather River near Oroville

U. S. Geological Survey and Department of Water Resources cooperative station on left bank of Feather River, three and one-half miles east of Oroville, 150 feet east of the Feather River bridge on the Oroville-Quincy Highway. Continuous water stage recorder and staff gage with zero set at elevation 182.02 feet, U.S.G.S. Datum. Department of Water Reaources maintains an automatic short wave radio water stage broadcaster at this station. Rating curve extended for flows in excess of 62,000 second-feet by means of velocity-area and slope-area studies. Period of record at this station, 1934 to date. (Records available 1902 to 1934 at other station five miles downstream at Oroville.) Dischargea published in U.S.G.S. Water Supply Papers. Flood season stages published in reports of Department of Water Resources. Maximum recorded stage and discharge, 1934 to 1957, 76.77 feet and 203,000 second-feet, December 23, 1955. Maximum stage and discharge, estimated from high water marks at this site and measurements at Oroville, 80.5 feet and 230,000 second-feet, March 19, 1907. Formerly presented as station number 39 in Flood Flows and Stages series of reports.

Note: No measurements are included; for correasponding discharges see stream flow table for this station.

STATION DESCRIPTION

Feather River near Gridley

Department of Water Resources station on left bank of Feather River on downstream side of abutment of bridge on Gridley-Oroville Road two and one-half miles east of Gridley. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Flood season stages from 1929 to date are published in reports of the Department of Water Resources. Highest recorded stage, 102.25 feet, December 23, 1955. Formerly presented as station number 41 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for thia station.

STATION DESCRIPTION

Yuba River at Englebright Dam

U. S. Geological Survey station on left bank upstream from the spillway of Narrows Dam one mile upstream from Deer Creek and two and one-half miles northeast of Smartville. Continuous water stage recorder and staff gage with zero set at elevation 526.99 feet, U.S.G.S. Datum. Spillway rated by U.S.G.S. Flows at Smartville are the sum of measured flows of Yuba River over the spillway, flows through the Power House turbines and flows on Deer Creek near Smartville. Period of record, 1941 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge 17.67 feet and 148,000 second-feet, respectively, on December 23, 1955. Period of record at abandoned site at Smartville, 1903 to 1941. Maximum recorded stage and discharge at Smartville 31.2 feet and 120,000 second-feet, March 26, 1928. Formerly published as Yuba River at Narrows Dam. station number 42 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Yuba River at Marysville

U. S. Geological Survey and Department of Water Resources cooperative station near left bank of Yuba River at Simpson Lane Bridge one-half mile upstream from Marysville. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Period of record, 1940 to date. Records published in reports of Department of Water Resources. Low and medium flows published in U.S.G.S. Water Supply Papers. High flows affected by backwater from Feather River. Station washed out in December 1955 and replaced in April 1956. Maximum recorded stage and discharge, 72.04 feet and 78,800 second-feet, November 21, 1950; maximum estimated stage and discharge, 81.5 feet and 136,000 second-feet, probably December 23, 1955. Formerly published as Yuba River at Simpson Lane Bridge, station number 43 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Feather River at Yuba City

Department of Water Resources station near right bank of Feather River on downstream side of Sacramento Northern Railroad Bridge at Yuba City. Continuous water stage recorder and staff and wire weight gages set on U.S.E.D. Datum. Period of record 1943 to date. Records published in reports of Department of Water Resources. Stages affected by backwater from Yuba River. Maximum recorded stage, 82.42 feet, December 24, 1955, at time of Levee District No. 1 levee failure in the vicinity of Gum Tree Station approximately two miles downstream. Formerly presented as station number 45T in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Feather River below Shanghai Bend

Department of Water Resources station on right bank of Feather River about five miles south of Yuba City. Continuous water stage recorder and ataff set on U.S.E.D. Datum. Records available for flood periods from 1926 to date published in reports of Department of Water Resources. High flows rated by means of simultaneous current meter measurementa of discharge of Feather River at Yuba City and Yuba River at Marysville with appropriate time lag allowsnces. Maximum recorded stage and discharge, 70.4 feet and 205,000 second-feet, December 11, 1937. On December 24, 1955, a stage of approximately 76.8 feet was reached, as determined by flood marks, st time of levee failure in the vicinity of Gum Tree Station approximately two miles upatream. Formerly presented as station number 46 in Flood Flows and Stages aeries of reports.

Note: No measurementa are included; for corresponding diacharges see stream flow table for this station.

STATION DESCRIPTION

Bear River near Wheatland

U. S. Geological Survey station near middle of downstream side of U. S. Highway 99E bridge over Bear River, one mile southeast of Wheatland. Continuous water stage recorder and staff gage with zero set at elevation 78.92 feet, U.S.G.S. Datum. Period of record, 1928 to date. Discharges published in U.S.G.S. Water Supply Papers. Prior to October 1943 gage at several sites within 100 feet of present gage and at Datum 2.58 feet higher. Maximum recorded stage 20.83 feet, November 21, 1950, corresponding to a flow of 29,000 second-feet. Maximum recorded discharge 33,000 second-feet with a stage of 19.30 feet, December 22, 1955. Formerly presented as station number 47 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Dry Creek near Wheatland

U. S. Geological Survey and Department of Water Resources cooperative station on left bank of Dry Creek 2,300 feet upstream from U. S. Highway 99E, 1.3 miles northwest of Wheatland. Continuous water stage recorder and staff gage with zero set at elevation 62.83 feet, U.S.G.S. Datum. Period of record October 1946 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum stage and discharge 13.45 feet and 8,790 second-feet, December 23, 1955. Overbank flow into Best Slough upstream from this station occurs at high stages. Formerly presented as station number 47A in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Feather River at Nicolaus

U. S. Geological Survey and Department of Water Resources cooperative station on left bank of Feather River about 2,000 feet downstream from old Nicolaus Bridge. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Period of record 1920 to date. Discharges published in U. S. Geological Survey Water Supply Papers, summer season only prior to April 1943. Flood season stages published in reports of Department of Water Resources. Flood stages affected by backwater from Sutter Bypass. Maximum recorded stage, 51.6 feet, December 23, 1955, at time of levee failure immediately downstream. (Prior to October 1945, U. S. Weather Bureau maintained a gage at east end of Nicolaus Bridge with zero set at 24.83 feet, U.S.E.D. Datum. Gage reset on U.S.E.D. Datum and minus 3.25 U.S.C.S. Datum during that month. Records published in reports of U. S. Weather Bureau for period 1911 to date.) Formerly presented as station number 48 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Fremont Weir at East End

Department of Water Resources station about 200 feet north of east end of Fremont Weir. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Crest of weir at elevation 33.5 feet. Period of record 1935 to 1941 and 1942 to date. Stages during periods of flow over weir published in reports of Department of Water Resources. Flows over weir rated by means of measurements in Yolo Bypass. Maximum recorded stage, 39.3 feet, March 1, 1940. Formerly presented as station number 49 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Fremont Weir at West End

Department of Water Resources, U. S. Geological Survey and U. S. Department of the Army cooperative station about 500 feet westerly from west end of Fremont Weir. Continuous water stage recorder and staff gage sat on U.S.E.D. Datum. Department of Water Resources maintains an eutometic short wave radio water stage broadcaster at this station. Crest of weir at elevation 33.5 feet. Period of record 1934 to date. Records published in reports of Department of Water Resources. Flows over weir rated by means of measurements in Yolo Bypass. Maximum recorded stage, 39.72 feet, December 23, 1955. Formerly presented as station number 50 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Verona

U. S. Geological Survey and Department of Water Resources cooperative station on left bank of Sacramento River on bridge over mouth of Natomas Cross Canal, 0.8 mile southeast of Verona. Continuous water stage recorder and staff gage set 0.06 foot below U.S.E.D. Datum. Station rated by means of current meter measurements in conjunction with river stages at Sacramento to allow for effect of backwater from American River. Period of record 1926 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, 41.20 feet and 79,200 second-feet, March 1, 1940. Department of Water Resources receives stage reports by telephone daily from observer at this station. Formerly presented as station number 51 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Sacramento Weir

U. S. Geological Survey and Department of Water Resources cooperative station on pile dolphin on right bank of Sacramento River about 100 feet downstream from Sacramento Weir. Continuous water stage recorder and staff gage with zero set on 0.00 feet, U.S.E.D. Datum and minus 3.07 feet, U.S.C.S. Datum. Floor and top of movable gates of weir constructed to elevations 25.0 and 31.0 feet, respectively. Period of record, 1926 to date during flood seasons. Stage records published in reports of Department of Water Resources. Station rated for flows over Sacramento Weir by means of measurements in Sacramento Bypass, in conjunction with records of number of closed and open gates, of which there are 48, each 38.1 feet in length. Maximum stages therefore do not necessarily indicate maximum flows over the weir. The only flow through the weir was seepage through the closed gates which occurred during the period February 26 through March 11, 1957. Seepage occurs only when the recorder on the Sacramento River opposite the weir records a water stage higher than 25.0 feet. Highest recorded stage and estimated discharge over the weir with all gates open, 32.8 feet and 118,000 second-feet, March 26, 1928. With 46 gates open, 32.85 feet and 110,300 second-feet, November 21, 1950. Highest recorded stage 33.09 feet, December 23, 1955. Formerly presented as station number 53 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

American River at Fair Oaks

U. S. Geological Survey station on right bank of American River immediately upstream from county road bridge one-half mile southeast of Fair Oaks. Continuous water stage recorder and staff gage set with zero at elevation 64.79 feet, U.S.G.S. Datum. Period of record, 1904 to date. (Prior to November 7, 1930, zero of gage was set at elevation 65.79 feet, U.S.O.S. Datum). Discharges published in U.S.G.S. Water Supply Papers; flood season stages in reports of Department of Water Resources. Maximum recorded stage and discharge, 31.85 feet, and 190,000 second-feet, November 21, 1950. Formerly presented as station number 57 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

American River at Sacramento

U. S. Geological Survey and Department of Water Resources cooperative station on left bank at "N" Street Bridge over American River immediately east of the City of Sacramento. Continuous water stage recorder, and staff and wire weight gages with zero set on 0.00 feet, U.S.E.D. Datum and minus 3.07 feet, U.S.G.S. Datum. Period of record, 1926 to date. Summer discharges published in U.S.G.S. Water Supply Papers; flood season stages and discharge measurements in reports of Department of Water Resources. Highest recorded stage, 45.75 feet, November 21, 1950. The U. S. Weather Bureau and Department of Water Resources cooperatively maintain a "telemark" water stage indicator at this station operable by call over P.T. & T. Company system. Formerly published as American River at "N" Street Bridge, station number 58T in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

American River at Elvas

Department of Water Resources station on Southern Pacific Railroad Bridge over American River immediately east of Sacramento on third concrete pier from left bank. Weekly water stage recorder and staff gage set on U.S.E.D. Datum, since July 1, 1938. Period of record, 1928 to date. Continuous water stage recorder installed in new well, October 1952. During flood of March 1928, zero of gage was set at 6.06 feet, U.S.E.D. Datum. From 1929 to 1938 zero of gage was set at minus 1.26 feet, U.S.E.D. Datum, Records published in reports of Department of Water Resources. Maximum recorded stage (converted to U.S.E.D. Datum) 40.5 feet, November 21, 1950. Formerly presented as station number 59 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River at Sacramento

U. S. Weather Bureau and Department of Water Reaources station on left bank of Sacramento River. Weather Bureau staff gage set on east face of downstream end of first pier beyond left bank on Southern Pacific Railroad bridge at foot of "I" Street, City of Sacramento. Department of Water Resources continuous water stage recorder in shelter house on wharf of Old Pioneer Mill Company about 300 feet upstream from bridge. The gage was destroyed December 1955 and a new one installed November 1956, 800 feet upstream from "I" Street Bridge in left bank. The U. S. Weather Bureau and the Department of Water Resources cooperatively maintain a "telemark" water stage indicator at this station, operable by call over P. T. & T. Company system. Zero of staff gage and recorders set at elevation 3.10 feet, U.S.E.D. Datum and 0.12 foot, U.S.G.S. Datum, prior to November 1956, subsequent elevation set at 2.98 feet U.S.E.D. Datum, and 0.00 feet U.S.G.S. Datum. Period of continuous record, 1893 to date. Maximum recorded stage prior to construction of Sacramento Weir 29.6 feet, January 17, 1909. Maximum recorded stage and discharge subsequent to construction of Sacramento Weir, 30.14 feet and 104,000 second-feet, November 21, 1950. Formerly published as Sacramento River at "I" Street Bridge, station number 61T in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Sacramento River at Clarksburg

Department of Water Resources station on right bank of Sacramento River at Clarksburg on dock of American Crystal Sugar Company. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Period of record, 1936 to date. Records published in reports of Department of Water Resources. Highest recorded stage, 23.95 feet, December 23, 1955. Formerly presented as station number 62 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River at Snodgrass Slough

Department of Water Resources station on left bank of Sacramento River, one-quarter mile upstream from the head of Snodgrass Slough (head of Slough cut off from Sacramento River by levee). Continuous water stage recorder and staff gage with zero set at elevation 0.00 feet, U.S.E.D. Datum, and minus 3.02 feet, U.S.G.S. Datum. Period of record, 1939 to date. Records published in reports of Department of Water Resources. Highest recorded stage, 20.47 feet, December 23, 1955. Formerly presented as station number 63 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River at Walnut Grove

Department of Water Resources station on left bank of Sacramento River at Walnut Grove immediately upstream from head of Georgiana Slough. Period of record, 1929 to date. Continuous water stage recorder and staff gage set on U.S.E.D. Datum, February 19, 1929, to April 10, 1931; reset with zero at 0.33 foot, U.S.E.D. Datum, April 19, 1931, to September 6, 1940; and with zero at elevation 2.84 feet, U.S.E.D. Datum and 0.00 foot, U.S.C.S. Datum, September 6, 1940, to date. Records published in reports of Department of Water Resources. Highest recorded stage 12.4 feet (15.2 feet, U.S.E.D. Datum) February 8, 1940; December 24 and 25, 1955. Formerly presented as station number 64 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River near Rio Vista

U. S. Department of the Army station on the right bank of Sacramento River at U. S. Department of the Army dock one mile downstream from Rio Vista. Continuous water stage recorder and staff gage set with zero at elevation 0.00 feet, U.S.E.D. Datum and minus 3.06 feet, U.S.G.S. Datum. Period of record, 1925 to date. Records published in reports of Department of Water Resources. From 1906 to 1954 staff gage records are available from a Weather Bureau station at Rio Vista and published in reports of that agency. The zero of the staff gage was set at minus 0.79 feet, U.S.E.D. Datum. Maximum recorded stage, 18.0 feet (17.2 feet, U.S.E.D. Datum), March 24, 1907. Subsequent to the enlargement of the outlet of Sacramento River from Cache Slough to Collinsville, substantially completed in 1927, flood magnitudes were no longer indicated by stages at Rio Vista on account of the resulting effect of tidal stages. Highest recorded stage subsequent to the channel enlargement, 10.0 feet, U.S.E.D. Datum, December 26, 1955. Formerly presented as station number 65 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Sacramento River at Collinsville

Department of Water Resources station on the right bank of Sacramento River, 500 feet upstream from the main street of Collinsville. Continuous water stage recorder and staff gage on intake structure of Fontana Farms canal with zero set at elevation 0.00 feet, U.S.E.D. Datum, minus 3.05 feet, U.S.O.S. Datum and 0.51 foot above mean lower low water at Presidio, San Francisco. Period of record, 1929 to date. Records published in reports of Department of Water Resources. Maximum historical high tide, 9.6 feet, U.S.E.D. Datum, observed January 3, 1909. Maximum recorded high tide, 9.2 feet, December 26, 1955. Formerly presented as station number 66 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Colusa Basin Drain at Highway 20

Department of Water Resources station on upstream end of center pier on highway bridge about three miles west of Colusa. Continuous water stage recorder and staff gage at an altitude of about 40 feet. Period of record, 1941 to date. Stage and discharge measurements published in reports of Department of Water Resources. Highest recorded stage 14.2 feet, February 8, 1942. Formerly published as Colusa Trough at Tahoe-Ukish Highway, station number 67 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Colusa Basin Drain at Knights Landing

Department of Water Resources station on the left abutment of Knights Landing Ridge Cut Outfall Gates structure one-quarter mile west of Sacramento River immediately upstream from Knights Landing. Continuous water stage recorder and staff gage aet on U.S.E.D. Datum. Department of Water Resources maintains an automatic short wave radio water stage broadcaster at this station. Station rated for flows through Knights Landing Ridge Cut by means of measurements and gage heights at Station No. 70 to allow for effect of backwater from Yolo Bypass. Period of record, 1940 to date. Records published in reports of Department of Water Resources. Maximum recorded stage and simultaneous discharge through Knights Landing Ridge Cut, 36.8 feet and 13,600 second-feet, February 10, 1942. Formerly published as Colusa Basin Drain at Knights Landing Outfall Gates, station number 68 in Flood Flows and Stages series of reports.
Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Cache Creek at Yolo

U. S. Geological Survey station on left bank of Csche Creek about one-half mile southwest from Yolo on abutment of an old county bridge about 800 feet upstream from bridge over Csche Creek on Highwsy 99W. Continuous water stage recorder and staff gage set with zero at 59.1 feet, U.S.E.D. Datum, prior to June 11, 1954, and elevstion 55.1 feet, U.S.E.D. Datum, subsequent to that date. Period of record, 1930 to date. Discharge published in U.S.G.S. Water Supply Fapers; flood season stages in reports of Department of Water Resources. Maximum recorded stage 30.00 feet, Februsry 23, 1955, corresponding to s discharge of 27,400 second-feet. Maximum recorded discharge, 28,700 second-feet (plus an estimsted overflow on right bsnk of 10,000 second-feet), February 28, 1940. Maximum observed stage, 29.8 feet (88.9 feet, U.S.E.D. Dstum), February 2, 1915. Formerly presented as station number 69 in Flood Flows snd Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Yolo Bypass near Woodland

U. S. Geological Survey and Department of Water Resources station on east levee of Yolo Bypass immediately upstream from Sacramento Northern Railway. Continuous water stage recorder and staff gage with zero set at 0.00 feet, U.S.E.D. Datum, and minus 3.07 feet, U.S.G.S. Datum. Period of continuous record, 1941 to date. Staff gage readings during flood stages of the season of 1940-1941. Records published in reports of Department of Water Resources. Maximum recorded stage and discharge, 32.0 feet and 272,000 second-feet, February 8, 1942. Formerly published as Yolo Bypass at Elkhorn, station number 70 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Yolo Bypass at Sacramento Bypass

Department of Water Resources station at the intersection of the east levee of Yolo Bypass and the north levee of Sacramento Bypass. Continuous water stage recorder and staff gage with zero set at elevation 0.00 feet, U.S.E.D. Datum, and minus 3.07 feet, U.S.G.S. Datum. Period of record 1925 to date. Records published in reports of Department of Water Resources. Maximum recorded stage, 26.89 feet, December 24, 1955. Formerly presented as station number 71 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Putah Creek near Winters

U. S. Geological Survey station on left bank of Putah Creek, six miles west of Winters on Monticello Road. Continuous water stage recorder and staff gage with zero set at elevation 160.75 feet, U.S.O.S. Datum. Period of record 1930 to date. Prior to March 1, 1940, zero of recorder and staff gage was set at elevation 161.6 feet, U.S.O.S. Datum. Discharges published in U.S.O.S. Water Supply Papers. Maximum recorded stage and discharge, 30.5 feet present datum (192.1 feet, U.S.O.S. Datum) and 81,000 second-feet, February 27, 1940. Formerly presented as station number 72 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Yolo Bypass at Lindsay Slough

Department of Water Resources station on the right bank of Lindsay Slough at California Packing Corporation headquarters, 1.1 miles upstream from Cache Slough. Continuous water stage recorder and staff gage with zero set at elevation 0.0 feet, U.S.E.D. Datum and minus 2.92 feet, U.S.G.S. Datum. Miscellaneous staff gage readings in this approximate vicinity since 1907. Period of continuous record, 1941 to date. Records published in reports of Department of Water Resources. Maximum stage and discharge, estimated from preserved high water mark near Maine Prairie tied in to present U.S.E.D. Datum, 20.7 feet and 390,000 second-feet, March 23, 1907, at which time Ryer Island and Egbert Tract were submerged. If only Egbert Tract had been submerged, it is estimated that the stage at Lindsay Slough would have been 21.8 feet.* Subsequent to the enlargement of Sacramento River from Cache Slough to Collinsville, substantially completed in 1927, stages at Lindsay Slough were greatly reduced. Under existing conditions it is estimated that a flood of the magnitude of that of March 1907 would result in a stage and discharge of 16.7 feet and 452,000 second-feet in Yolo Bypass at Lindsay Slough with Egbert Tract submerged. Maximum stage subsequent to installation of recorder, 16.1 feet immediately prior to, and 13.7 feet following the inundation of Egbert Tract, February 8, 1942; estimated discharge, 270,000 second-feet. Formerly presented as station number 75 in Flood Flows and Stages series of reports.

* Report of Division of Water Resources entitled, "Magnitude, Stage and Frequency of Flood Flows of Sacramento River near Rio Vista - December 1942".

STATION DESCRIPTION

Cosumnes River at Michigan Bar

U. S. Geological Survey station on downstream side of midstream pier of county road bridge over Cosumnes River about three miles upstream from State Highway No. 16 bridge. Continuous water stage recorder and staff gage at an altitude of about 190 feet. Rating curve extended for flows in excess of 19,000 second-feet by logarithmic plotting. Period of record, 1907 to date. Staff gage readings only, prior to 1929. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge, 14.59 feet and 42,000 second-feet, December 23, 1955. Formerly presented as station number 76 in Flood Flows and Stages series of reports.
Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Cosumnes River at McConnell

Department of Water Reaources, U. S. Geological Survey and U. S. Bureau of Reclamation cooperative station on U. S. Highway 99 bridges over Cosumnea River and overflow channels. Continuous water stage recorder and staff gage on third bridge pier from right bank of Cosumnes River and staff gagea on bridgea over each of the three overflow channels, all set on U.S.E.D. Datum. Period of record 1931 to date. Records published in reports of Department of Water Resources and U.S.G.S. Water Supply Papers since October 1943. Maximum recorded stage and discharge 46.26 feet and 54,000 second-feet, December 23, 1955. Formerly published as Caumnes River at McConnell Station, station number 77 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Mokelumne River near Clements

U. S. Geological Survey station* on left bank of Mokelumne River 700 feet upstream from Clements-Ione Highway Bridge, one mile north of Clements. Continuous water stage recorder and staff gage at an altitude of 67.17 feet, U.S.G.S. Datum. Period of record, 1904 to date. Prior to April 1926 staff gage was located at bridge 700 feet downstream with datum 1.93 feet higher. During period April 1926 to December 1930 recorder was located 75 feet downstream and with datum 0.07 foot lower. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge November 21, 1950, 24.4 feet and 28,800 second-feet. Formerly presented as station number 78 in Flood Flows and Stages series of reports.

* Operated by Department of Water Resources during 1954-55.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Mokelumne River at Woodbridge

U. S. Geological Survey station on left bank of Mokelumne River, 0.4 mile downstream from Woodbridge Irrigation District diversion dam. Continuous water stage recorder and staff gage with zero set at elevation 14.86 feet, U.S.G.S. Datum. Rating curve extended for flows in excess of 5,000 second-feet by contracted-opening determination. Period of record, 1925 to date. Discharges published in U.S.G.S. Water Supply Papers since 1929. Maximum recorded stage, 30.6 feet on present datum, March 26, 1928; discharge estimated about 24,000 second-feet. Maximum recorded stage and simultaneous discharge 29.58 feet and 27,000 second-feet, November 22, 1950. Formerly presented as station number 79 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Mokelumne River at New Hope Bridge

Department of Water Resources station on right bank of South Fork of Mokelumne River immediately downstream from Walnut Grove-Thornton highway bridge. Continuous water stage recorder and staff gage with zero set at elevation of 0.26 foot, U.S.E.D. Datum, prior to August 6, 1940, and at elevation 2.84 feet, U.S.E.D. Datum and 0.00 feet, U.S.G.S. Datum, subsequent to that date. Period of record 1924 to date. Records published in reports of Department of Water Resources. Maximum recorded stage 13.33 feet (16.17 feet, U.S.E.D. Datum), December 25, 1955. Formerly presented as station number 80 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Threemile Slough at Sacramento River

Department of Water Resources station on right bank of Threemile Slough, 300 feet downstream from Sacramento River. Zero of continuous water stage recorder and staff gage set on U.S.E.D. Datum prior to August 23, 1940, and at elevation 0.00 foot, U.S.C.S. Datum, and 3.22 feet, U.S.E.D. Datum, subsequent to that date. Period of record 1930 to date. Records in files of Department of Water Resources and published since 1944 in reports of that agency. Highest recorded stage, 9.9 feet, U.S.E.D. Datum and 6.7 feet, U.S.C.S. Datum, December 26, 1955. Formerly presented as station number 82 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Threemile Slough at San Joaquin River

Department of Water Resources station on right bank of Threemile Slough, 500 feet upstream from San Joaquin River. Zero of continuous water stage recorder and staff gage set on U.S.E.D. Datum prior to August 22, 1940, and at elevation 0.00 foot, U.S.G.S. Datum, and 2.89 feet, U.S.E.D. Datum, subsequent to that date. Period of record 1939 to date. Records in files of Department of Water Resources and published since 1944 in reports of that agency. Highest recorded stage*, 8.65 feet, U.S.E.D. Datum, and 5.76 feet, U.S.G.S. Datum, December 28, 1940. Formerly presented as station number 83 in Flood Flows and Stages series of reports.

* Record not complete in December 1955

STATION DESCRIPTION

Calaveras River at Jenny Lind

U. S. Geological Survey station on right bank of Calaveras River, 70 feet downstream from Milton Road bridge, one-quarter mile south of Jenny Lind. Continuous water stage recorder and staff gage at an altitude of about 224 feet. Rating curve extended for flows in excess of 11,000 second-feet by logarithmic plotting. Period of record, 1907 to date. Discharges published in U.S.G.S. Water Supply Papers. Maximum recorded stage and discharge 14.0 feet (21.0 feet on present gage) and 50,000 second-feet, January 31, 1911. Formerly presented as station number 84 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

San Joaquin River at Fremont Ford Bridge

U. S. Geological Survey, Department of Water Resources, and U. S. Bureau of Reclamation cooperative station on left bank of San Joaquin River downstream from Fremont Ford Bridge on Merced-Gustine highway. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Period of record 1937 to date. The first recorder and gages, installed April 9, 1937, were set with zero at elevation 46.44 feet, U.S.G.S. Datum (50.17 feet, U.S.E.D. Datum). Discharges at this station include the combined flows of San Joaquin River and three overflow channels, known locally as North, Middle and South Mud Sloughs. Station rated by simultaneous measurements on all four channels in conjunction with stage observations at San Joaquin River near Newman station to allow for the effect of backwater from Merced River. Records published in reports of Department of Water Resources. Maximum recorded stage and discharge, 71.5 feet, U.S.E.D. Datum, and 18,900 second-feet, March 7, 1938. Formerly presented as station number 85 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Merced River below Snelling

Department of Water Resources station on center pier of highway bridge about twelve miles north of the City of Merced immediately downstream from Yosemite Valley Railroad trestle. Continuous water stage recorder and staff gage set on U.S.E.O. Datum, prior to August 8, 1952, and at elevation 183.26 U.S.G.S. Datum, subsequent to that date. Period of record 1938 to date. Records published in reports of Department of Water Resources. Maximum recorded stage and discharge 10.1 feet (193.36 feet on present gage) and 26,000 second-feet, December 4, 1950. Formerly presented as station number 86 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Merced River At Cressey

Department of Water Resources station on left bank of Merced River 400 feet upstream from highway bridge near Cressey. Continuous water stage recorder and staff gage set at an altitude of about 100 feet. Period of record 1941 to date. Records in files of Department of Water Resources and published since 1944 in reports of that agency. Station rated for low and medium flows only. Highest recorded stage, 22.7 feet, December 4, 1950. Formerly presented as station number 87 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

San Joaquin River near Newman

U. S. Geological Survey station on left bank of San Joaquin River at Hills Ferry Bridge, 3.5 miles northeast of Newman. Continuous water stage recorder and staff gage with zero set at elevation 51.0 feet, U.S.E.D. Datum. Period of record, 1912 to date. Discharges published in U.S.G.S. Water Supply Papers; flood season stages in reports of Department of Water Resources. Maximum recorded stage and discharge, 18.5 feet and 33,000 second-feet, March 7, 1938. Formerly presented as station number 88 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Tuolumne River at La Grange Bridge

Department of Water Resources and Turlock Irrigation District station near left bank of Tuolumne River on downstream side of bridge immediately north of La Grange. Weekly water stage recorder and staff gage set on U.S.G.S. Datum. Station rated for low and medium flows only. Period of record 1940 to date. Records published in reports of Department of Water Resources. Maximum recorded stage, 188.0 feet, December 8, 1950. Formerly presented as station number 92 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Tuolumne River at Tuolumne City

Department of Water Resources, City of San Francisco, Modesto and Turlock Irrigation Districts station on pier of Tuolumne City Bridge near right bank of Tuolumne River, 3.3 miles upstream from San Joaquin River. Continuous water stage recorder and staff gage set on U.S.E.D. Datum. Station rated for low and medium stages. High stages affected by backwater from San Joaquin River. Period of record, 1934 to date. Records published in reports of Department of Water Resources. Maximum stage 46.65 feet, December 9, 1950. Formerly presented as station number 96 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Stanislaus River at Orange Blossom Bridge

Department of Water Resources and Oakdale Irrigation District station near right bank of Stanislaus River on downstream side of bridge, 5.7 miles upstream from Oakdale. Continuous water stage recorder and staff gage at an altitude of about 125 feet. Period of record, 1939 to date. Records published in reports of Department of Water Resources. Maximum recorded stage and discharge, 30.05 feet and 52,000 second-feet, November 21, 1950. Maximum observed stage 31.8 feet, December 23, 1955. Formerly presented as station number 98 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

Stanislaus River at Ripon

U. S. Geological Survey, Department of Water Resources, City of San Francisco, and Modesto and South San Joaquin Irrigation Districts station on left bank of Stanislaus River downstream from railroad and U. S. Highway 99 bridges. Continuous water stage recorder and staff gage set on U.S.G.S. Datum. Period of record, 1940 to date. Discharges published in reports of U. S. Geological Survey; stages in reports of Department of Water Resources. Maximum recorded stage and discharge, 63.25 feet and 62,500 second-feet, December 24, 1955. Flood of February 12, 1938, reached a stage of 64.4 feet as determined by flood marks. Formerly presented as station number 100 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

San Joaquin River near Vernalis

U. S. Geological Survey and Department of Water Resources station on left bank of San Joaquin River at Durham Ferry Bridge, 3.4 miles northeast of Vernalis. Continuous water stage recorder and staff gage with zero set at elevation 8.4 feet, U.S.E.D. Datum since April 1931. Department of Water Resources maintains an automatic short wave radio water stage broadcaster at this station. Period of record, 1922 to date with the exception of the seasons of 1922 and 1925 to 1929 for which there are low flow records only. Discharges published in U.S.G.S. Water Supply Papers; flood stages in reports of Department of Water Resources. Maximum recorded stage and discharge, 26.89 feet and 50,900 second-feet, December 25, 1955. Maximum stage 27.75 feet, December 9, 1950, corresponding to a flow of about 79,000 second-feet. Formerly presented as station number 101 in Flood Flows and Stages series of reports.

Note: No measurements are included; for corresponding discharges see stream flow table for this station.

STATION DESCRIPTION

San Joaquin River at Mossdale Bridge

Department of Water Resources station on right bank of San Joaquin River immediately downstream from Mossdale Bridge on U. S. Highway 50. Continuous water stage recorder and staff gage set with zero at elevation 5.16 feet, U.S.E.D. Datum, prior to April 21, 1943, and at 3.27 feet, U.S.E.D. Datum and 0.30 feet, U.S.G.S. Datum, subsequent to that date. Periods of record, 1920 to date. Records published in reports of Department of Water Resources. Maximum recorded stage and combined flow in San Joaquin River and through Paradise Cut, 24.4 feet and 70,000 second-feet, December 10, 1950. Weather Bureau gage near this station, zero set at 1.94 feet, U.S.O.S. Datum. Formerly presented as station number 102 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

San Joaquin River at Rindge Pump

Department of Water Resources station on right bank of San Joaquin River (Stockton Deep Water Channel) at junction with Fourteen Mile Slough at southeast corner of Rindge Tract. Continuous water stage recorder and staff gage with zero eet at elevation 3.0 feet, U.S.E.D. Datum and 0.00 feet, U.S.G.S. Datum, subsequent to August 5, 1940, and at minus 2.2 feet, U.S.E.D. Datum prior to that date. Period of record, 1939 to date. Records published in reports of Department of Water Resources. Maximum recorded stage,* 11.3 feet (9.1 feet, U.S.E.D. Datum), February 28, 1940. Maximum observed stage from high water mark, 7.1 feet (10.1 feet, U.S.E.D. Datum) December 1955. Formerly presented as station number 103 in Flood Flows and Stages series of reports.

* Record not complete in December 1955.

STATION DESCRIPTION

San Joaquin River at Venice Island

U. S. Department of the Army station on Little Connection Slough on Empire Island about one mile south of Venice Island Ferry. Continuous water stage recorder and staff gage set on old U.S.E.D. Datum and minus 3.45 feet, U.S.G.S. Datum. Period of record 1927 to date. Records published in reports of Department of Water Resources. Maximum recorded stage 10.7 feet, December 26, 1955. Old station on Venice Island destroyed by boat during November 1951. Formerly presented as station number 104 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Middle River at Borden Highway

Department of Water Resources station on left bank of Middle River adjacent to the downstream side of Borden Highway Bridge on Victoria Island. Continuous water stage recorder and staff gage with zero set at minus 4.10 feet, U.S.O.S. Datum, prior to March 5, 1943, and at 0.00 feet, U.S.O.S. Datum, and 3.15 feet, U.S.E.D. Datum, subsequent to that date. Period of record 1939 to date. Records in files of Department of Water Resources and published since 1944 in reports of that agency. Highest recorded stage, 7.2 feet (10.35 feet, U.S.E.D. Datum), December 26, 1955. Formerly presented as station number 105 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Old River near Rock Slough

Department of Water Resources station on left bank of Old River one mile north of Rock Slough on American Island (formerly Holland Tract). Continuous water stage recorder and staff gage with zero set at minus 3.0 feet, U.S.O.S. Datum, minus 3.3 feet, U.S. Bureau of Reclamation Datum, 0.6 foot, Holland Tract Datum, 0.98 foot, U.S.E.D. Old River Survey of 1936, and 0.00 foot, U.S.E.D. Datum, at head of Snodgrass Slough. Period of record, March 1, 1945 to date. Highest recorded stage, 10 feet, U.S.E.D. Datum, at head of Snodgrass Slough, December 26, 1955. Formerly presented as Station number 107 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

San Joaquin River at Antioch

Department of Water Resources station on left bank of San Joaquin River on the wharf of the City of Antioch water works. Continuous water stage recorder and staff gage set on U.S.E.D. Datum prior to August 23, 1940, and on U.S.C.S. Datum and zero at 2.99 feet, U.S.E.D. Datum, subsequent to that date. Period of record, 1929 to date. Records published in reports of Department of Water Resources. Maximum recorded stage, 6.2 feet (9.2 feet, U.S.E.D. Datum), December 26, 1955. Formerly presented as station number 108 in Flood Flows and Stages series of reports.

STATION DESCRIPTION

Suisun Bay at Benicia Arsenal

Department of Water Resources station on inshore side of Benicia Arsenal wharf at lower end of Suisun Bay. Period of record, intermittent from 1929 to 1940; continuous from 1940 to date. Prior to April 19, 1940, staff gage and weekly recorder set with zero at minus 2.21 feet, U.S.G.S. Datum. Continuous recorder and staff gage set April 19, 1940, with zero at minus 5.00 feet, U.S.G.S. Datum; reset October 26, 1942, with zero on U.S.G.S. Datum, 3.05 feet, U.S.E.D. Datum, at Collinsville and 3.56 feet above mean lower low water at Presidio, San Francisco. Highest recorded stage, 5.7 feet (8.75 feet, U.S.E.D. Datum, at Collinsville, and 9.26 feet above mean lower low water at Presidio), December 26, 1955. Formerly presented as station number 109 in Flood Flows and Stages series of reports.

LAHONTON AREA

LAHONTAN AREA

Introduction

The water resources of the Lahontan Area as a whole are greatly deficient with respect to the potential development of this region; however, sufficient water resources exist in a few stream basins to supply their ultimate needs. It is anticipated that the amount of stream flow information, as reported herein, will be increased in subsequent issues of this bulletin to provide the data for planning future development in these local basins.

Geographically the Lahontan Area is the most extensive of the hydrographic areas (see Plate 1). Lying along almost the entire California-Nevada border, the Lahontan Area extends from the Oregon border to the New York Mountains, within 40 miles of the Colorado River. It includes all the drainage basins of California lying east of the Warner Mountains, the Sierra Nevada, the Tehachapi Mountains, the Portal Ridge, the San Gabriel Mountains, and the San Bernardino Mountains. It does not include areas draining into the Salton Sea and the Colorado River. All of the principal streams of the area head on the eastern slopes of the Sierra Nevada or on the San Bernardino Mountains and flow into inland lakes or sinks in California or Nevada.

Tabular Information

On the following page are the data for two gaging stations, which represent the information available for the 1957 water year in the Lahontan Area.
