DISCHARGE MEASUREMENT OF YOLO BYPASS NEAR WOODLAND

In the above photograph, looking downstream, a discharge measurement is being made at the State Highway 24 bridge measurement section of the Yolo Bypass near Woodland gaging station. At this measurement section, the Yolo Bypass is approximately 9,000 feet wide and is spanned in part by the bridge shown in the photograph. The remainder of the section is measured by wading or by boat depending on the depth of water. Discharge at this section is a combination of the flows of Cache Creek and Knights Landing Ridge Cut and the flow over Fremont Weir. The equipment shown includes a typical crane-and-reel assembly and a Price current meter with a 75 pound Columbus weight. Notes are made of depths and velocities as the measurement progresses.

HARVEY O. BANKS
DIRECTOR

EDMUND G. BROWN
GOVERNOR

ADDRESS REPLY TO
P. O. BOX 388 SACRAMENTO 2
1120 N STREET HIGHWAY B-4711

STATE OF CALIFORNIA
Department of Water Resources
SACRAMENTO

December 10, 1960

Honorable Edmund G. Brown, Governor,
and Members of the Legislature
of the State of California

Gentlemen:

I have the honor to transmit herewith Bulletin No. 23-58, "Surface Water Flow for 1958." The basic data concerning water supply, stream flow, water stages, diversions, utilization, and salinity are presented in this report on an areal basis in accordance with the subdivision of the State into hydrographic areas.

This report continues the publication of water flow and utilization data collected and published as part of the Sacramento-San Joaquin Water Supervision Program, as well as pertinent water supply data gathered under other current programs of the department.

Very truly yours,

A handwritten signature in cursive script that reads "Harvey O. Banks".

HARVEY O. BANKS
Director

FOREWORD

This report presents to the user the extensive and varied basic hydrographic data resulting from thousands of measurements and observations of surface water flow and usage.

The three predominant types of data - stream flow, stages, and diversions - are presented for time periods related to their occurrence and use: viz., stream flow, for the 1957-58 water year (October 1, 1957, through September 30, 1958); stages, for the period November 1, 1957, through June 30, 1958, encompassing the interval of high water flows occurring in California streams; and diversions, for the diversion period November 1, 1957, through October 31, 1958, which includes the agricultural season of the 1958 calendar year.

ACKNOWLEDGEMENT

A large amount of the basic data presented in this report was obtained with the cooperation and assistance of many individuals, corporations, political subdivisions, and governmental agencies. It is gratifying to receive and to acknowledge this assistance. The fact that the assistance has been whole-hearted and objective is evidence of the interest shown in the water supplies of California and the importance given to basic water resource data by these agencies.

ORGANIZATION
DEPARTMENT OF WATER RESOURCES
DIVISION OF RESOURCES PLANNING

Harvey O. Banks	Director of Water Resources
Ralph M. Brody	Deputy Director
James F. Wright	Deputy Director
William L. Berry	Chief, Division of Resources Planning
Irvin M. Ingerson	Chief, Engineering Services Branch

Activities covered by this report were under the direction
of
Charles A. McCullough Principal Hydraulic Engineer

Supervisor of activities covered by this report
was
Floyd I. Bluhm* Senior Hydraulic Engineer

Assisted by

J. Douglass Locke	Senior Civil Engineer in charge of the Office Engineering Group
Edward J. Labrie	Senior Hydraulic Engineer in charge of the Stream Flow and Diversion Groups

Collection and computation of hydrographic data
were supervised by

Joseph L. Clausse	Associate Hydrographer
Grant C. Ardell	Associate Hydrographer
Ernest G. Olsen	Assistant Hydraulic Engineer
Doris M. Jacinto	Assistant Civil Engineer

Correlation and compilation of material covered by this report
were supervised by

Durand J. Stieger	Civil Engineering Technician
-------------------	------------------------------

Maps and plates were prepared under the direction
of

John L. James	Supervisor of Drafting Services
---------------	---------------------------------

Paul M. Barnes	Chief, Division of Administration
Porter A. Towner	Chief Counsel
Isabel C. Nessler	Coordinator of Reports

* A large part of the data for this report was gathered
under the supervision of Vernon Bengal,
Supervising Hydraulic Engineer.

INTRODUCTION

General

This report of Surface Water Flow presents data for the water year ending September 30, 1958. The current data for the area covered by the "Report of Sacramento-San Joaquin Water Supervision," published annually for the period 1924 through 1955, are included in the section of this report entitled Central Valley Area. Also included in this report are the current water stage data for stations located within the area covered by "Flood Flows and Stages in Sacramento and Northern San Joaquin Valleys," published for the period 1913 to 1956.

Records are presented in this report for three of the seven major hydrographic areas of the State and are grouped according to those areas. The three areas are:

North Coastal Area

Central Valley Area

Lahontan Area

The tabular data presented herein are shown under five general categories as follows: stream flow; water stages; diversions of water; summary; and supplementary data including precipitation, unimpaired runoff, and salinity.

The three plates included in this report show the following information:

Plate 1 shows the location of surface water measurement stations within the hydrographic areas; by appropriate symbol, the type of information obtained at the stations; and the area of measurement of diversions.

Plate 2 shows lines of annual maximum salinity encroachment in the Sacramento-San Joaquin Delta and Upper Bays.

Plate 3 shows hydrographs of reservoir operation for Shasta Lake, Folsom Reservoir, and Millerton Lake.

Programs

The information concerning water supply, stream flow, water stages, diversions, water utilization, and salinity, presented in this report, is obtained in accordance with several programs of the Department of Water Resources and with cooperative agreements with other agencies.

Sacramento-San Joaquin Water Supervision Program. This program, initiated in 1924, is carried on to gather basic data relating to water supply and utilization in the Sacramento and San Joaquin Valleys for the purpose of developing coordination between the supply and the several and varied uses of the water. Authorization for this program is provided by Sections 225 and 226 of the California Water Code.

Sacramento River Trial Distribution Program. This program, initiated in 1954, is aimed toward reaching a negotiated settlement between the local water users along the Sacramento River and in the Delta and the Bureau of Reclamation regarding their respective entitlements to the use of water and regarding provisions for a supplemental water supply.

Feather River Trial Distribution Program. The objective of this program which has been in progress since 1956, is to reach an agreement between local water users along the Feather River and the State of California regarding their respective entitlements to the use of water of this river and regarding provisions for supplemental water supplies from the Feather River Project.

enclosed by a topographic divide in which all surface runoff will drain by gravity into the stream above the specified point.

Unimpaired flow is the flow at a point that would occur naturally in a stream if there were: (1) no upstream controls due to dams and reservoirs; (2) no artificial diversions or accretions; and (3) no artificial changes in ground water aspects. Unimpaired flow is computed from measured runoff by allowing for man-made changes in the natural conditions.

Water year is the 12-month period from October 1 of any year through September 30 of the subsequent year, and is designated by the calendar year in which it ends.

Consumptive use refers to the water transpired, evaporated, and used in promoting vegetative growth and to the water evaporated from soil and water surfaces adjacent to the place of use.

EXPLANATION OF TABULAR DATA

The tabular data presented herein are divided into the five general categories of stream flow, stages, diversions and acreages irrigated, summary including station descriptions, and supplementary data.

Stream Flow Tables

General. The stream flow tables are arranged in downstream order to facilitate the determination of the coverage of a given drainage area. Also, all stations on a tributary entering above a main stem station are listed before that station. Stations on a tributary entering between two main stem stations are listed between those stations. Included with the stream flow tables are tables showing reservoir contents in acre-feet.

The name of a stream gaging station is determined from the name of the nearest post office (Feather River at Yuba City) or well-known landmark (San Joaquin River at Fremont Ford Bridge). In order to locate a specific station, reference should be made to the Alphabetical Index to Tables, to the Gaging Station Description and Data Summary tables, or to Plate 1, showing the location of gaging stations by colored wedges.

Accuracy. All stream flow data reported herein are derived through the use of mechanical, arithmetical and empirical operations. Since the results are affected by inherent inaccuracies in the procedures and equipment used, it becomes necessary to establish limits of accuracy for which the data are reported. The following is a listing of significant figures for stream flow data:

1. Daily flows - second-feet

0.0 - 9.9	Tenths
10 - 99	2 significant figures
100 up	3 significant figures
2. Means - second-feet

0.0 - 99.9	Tenths
100 - 999	3 significant figures
1000 up	4 significant figures

The water year totals are reported to a maximum of four significant figures.

Content. The stream flow tables show daily mean discharge in second-feet and monthly mean discharge in second-feet and acre-feet. The total runoff in acre-feet for the water year is given at the bottom of the table.

Stages Tables

General. Two types of daily data are presented on the height of water surface, or stage: (1) daily maximum and minimum gage heights, for those areas subject to tidal action; and (2) daily mean gage height, or an average of one or more daily staff-gage or wire-weight gage readings, for those areas beyond tidal influence. Of the 126 stations for which daily stages are presented in this report, 63 have computed daily mean flow included in the stream flow tables. The remaining 63 stations, reported for stage only, have their locations shown on Plate 1 by blue wedges.

Crest stages occurring during the period November 1957 through June 1958 are included for historical reference and for use in flood control levee maintenance, flood frequency studies, and design of hydraulic structures. A maximum of eight crest stages is reported for any one station.

Accuracy. Gage heights for stages tables are read in the field or computed from recorder charts and are reported to the tenth of a foot.

Content. Daily gage heights in feet are tabulated for each day of the period from November 1 through June 30. To obtain the elevation of the water surface at the gaging station, add the gage height readings to the elevation of the gage datum given in Tables 1, 23, and 402. Following the daily stage data are crest stages in feet with date and time of occurrence.

Diversions and Acreages Irrigated Tables

General. These tables show the water diverted during the period from November 1 through October 31 and the acreage irrigated thereby. While the major use of water is for agriculture, the small amounts diverted in some reaches for municipal and industrial use are also reported.

Accuracy. Because of the intermittent operation of most diversion facilities, the monthly diversions values are reported in acre-feet and to a maximum of three significant figures. The totals for individual water users and stream reaches are reported to a maximum of four significant figures.

Content. The information in the diversions tables includes the name of each diverter, the location of the point of diversion indicated in miles from a given reference point, the monthly and total amounts of water diverted, and the amount of acreage irrigated. The method of diversion, whether by gravity or pump, is also indicated. The size of the pump, given in inches, refers to the inside diameter of the discharge flange on the pump scroll.

Irrigation of the many types of crops grown varies in quantity of water application. However, as there is a major variation for rice application, amounting to about twice as much water as the average applied to the other crops, the irrigated acreage is divided according to category of crop. The two crop categories used are general and rice.

Average diversions in cubic feet per second and monthly use in per cent of annual use are presented in the tables at the end of each reach of stream. The monthly use in per cent of annual is the relation of the total water diverted during any month to the total for the 12-month diversion period.

Summary Tables

General. The tabular comparisons showing the occurrences and uses of water result in the production of distinctive types of information. The uses of these data are many. In California where various water uses, flood control, navigation, and conservation development vie for priority

and are interrelated, certain summary and correlative tables are in order. These tables are essential in order to provide ready reference and comparison.

Supply and Utilization. Inherent in the consideration of water conditions is the relationship between supply and utilization. This is of particular consequence during years of subnormal runoff when the demand equals or exceeds the supply. For this reason, correlative tables (20, 21, and 22) bringing together supply and demand are presented for the Sacramento and San Joaquin Rivers and tributaries and the Tule River. Along with the quantity of stream flow, flow from drains, and diversions, quantities of unmeasured accretions are shown. The accretions result from such factors as release from, or retention in, bank storage; evaporation; return flow; unmeasured minor tributaries; and other related factors.

These summary tables show quantities which vary greatly in magnitude. Therefore, for ease of use, all quantities are shown to the nearest one thousand acre-feet. If a closer analysis of a stream or reach is needed, reference should be made to the individual stream flow or diversions tables, numbers for which are shown in the column preceding the monthly figures.

Delta Service Area. The complexity of waterways, tidal action, seepage, and methods of agricultural water use (a combination of subirrigation and surface application), results in hydrologic problems which preclude normal methods of measuring supply and demand. This area is divided into uplands and lowlands (boundaries shown on Plate 2).

The correlation of water supply and utilization for the Delta Service Area is shown in Table 19. The water supply available to the area is determined from 13 gaging stations, listed under "Water Supply" in the table, and from precipitation stations in the area. "Water Utilization" in the same table includes agricultural use and evaporation within the area, exportations through the Delta-Mendota and Contra Costa Canals, and diversions by the City of Vallejo. The agricultural use in the uplands is determined by water diversion measurements; however, in the lowlands, because it cannot be measured directly, agricultural use is determined by unit consumptive crop usages multiplied by crop acreages. Unit consumptive use factors were derived from early experimental work at Davis by the University of California and California Extension Service. Crop acreages are determined by periodic land use surveys, the most recent of which was made in 1955.

Utilization. Summaries of diversions, by streams, for the last 10-year period are given in Tables 352 through 362. The data are given for each month in acre-feet, cubic feet per second, and the monthly percentage in relation to the seasonal total. Table 351 correlates the data in the foregoing eleven tables by showing the comparison of the average monthly percentage use for each stream for the 10-year period. Table 363 summarizes, for the Sacramento River above Sacramento, the acreages irrigated as well as diversions for the last 10 years.

A seasonal summary of water utilization in the Sacramento-San Joaquin Valley during the last 10-year period, is presented in Table 350. The gross duty tabulated for the March through October irrigation season shows both the amount of water diverted in acre-feet per acre irrigated and, inversely stated, the number of acres irrigated per one second-foot average diversion rate.

Gaging Stations. Tables 1, 23, and 402 provide a station description and summarize current and historical data for each gaging station reported. These tables show in tabular form the station location, maximum discharge for the 1957-58 water year and of record, total discharge for the 1957-58 water year and for the 1957 calendar year, period of record by month and year, and the

gage datum for each station. Station location is tabulated by latitude and longitude, as well as by quarter-section, section, township, and range.

Maximum discharge is usually represented by values in the higher range of the rating curve (a graph of the station's stage-discharge relation) and is therefore reported to a maximum of three significant figures.

Each station's gage is referenced to a well established datum plane elevation wherever such datum is known. Some gages are referenced only to arbitrarily assumed local datum planes, denoted as "local" in the reference datum column. All gage heights are in feet.

Additional information given in these tables includes hydrographic and other special information pertaining to the individual gaging stations.

Supplementary Tables

General. The supplementary tables include data directly related to the surface water program of the department and are presented for general information purposes. Information is given on precipitation, unimpaired runoff, and salinity.

Precipitation. Table 16 presents the monthly precipitation data for the water year for several stations in the Sacramento and San Joaquin Valleys from Shasta Dam to Fresno. The stations are not necessarily representative of the rainfall in any definite watershed or area, but give a general indication of the rainfall on the Central Valley floor.

Unimpaired Runoff. The relative magnitude of runoff occurring on any one stream for a given year is determined by comparing the natural or unimpaired runoff of that year with the mean unimpaired runoff of the stream over a long period of years. For this report, runoff comparisons are based on percentages of average determined for the 50-year period October 1905 through September 1955. Table 17 gives the 1957-58 monthly unimpaired runoff as a per cent of the 50-year average monthly unimpaired runoff for major streams of the Central Valley Area. Table 18 shows the unimpaired average annual flows for the same streams, and the annual unimpaired runoff in per cent of the 50-year average for each water year from 1919-20 through 1957-58.

Salinity. The seasonal intrusion of saline waters into the Sacramento-San Joaquin Delta area has been of concern for many years. Table 399 lists the salinity sampling stations. The stations are listed commencing with the Golden Gate as zero miles and proceeding through the bay system to the delta area. The salinity samples, when possible, are taken at four-day intervals and one and one-half hours after high-high tide. The observed concentrations of salinity are given in Table 401. The geographical locations of these stations are given on Plate 2, together with the line of maximum salinity encroachment (the line of 1000 parts of chloride per 1,000,000 parts of water) for the current water year and for other water years of historical interest.

DEPARTMENT REPORTS OF BASIC WATER RESOURCE DATA

Reports issued annually by the Department of Water Resources designed primarily to record basic hydrologic data and to present conditions of water supply directly related thereto include the following: (The year indicated is that of the latest publication as of December 1960.)

<u>Bulletin Series No.</u>	<u>Name</u>
23	Surface Water Flow for 1958 (Formerly Sacramento-San Joaquin Water Supervision.)
39	Water Supply Conditions in Southern California during 1957-58
65	Quality of Surface Waters in California, 1956-1957
66	Quality of Ground Waters in California, 1957
77	Ground-Water Conditions in Central and Northern California, 1957-58
--	Water Conditions in California, February, March, April, May, and October 1960 (Basic data supplements to these reports are available for the months February through May 1960.)

NORTH COASTAL AREA

NORTH COASTAL AREAIntroduction

The North Coastal Area extends for about 270 miles along the coast from the California-Oregon line south to the northern boundary of the Lagunitas Creek basin in Marin County. It ranges in width from 180 miles at the Oregon boundary to 30 miles in the southern portion. The topography of the area is predominantly mountainous, with many peaks above 6,000 feet. Mount Shasta, at elevation 14,161 feet, is the highest peak in the region. Stream flow is sustained through the summer and early fall by ground water seepage from a thick, absorptive soil mantle.

Tabular Information

On the following pages are the data for 13 gaging stations for the 1958 water year.

CENTRAL VALLEY AREA

CENTRAL VALLEY AREAIntroduction

The Central Valley Area is the locale of five important hydrologic features that focused early attention on the need for gathering basic data of water occurrence and utilization. These features are:

1. The existence of the two large river systems, namely the Sacramento and San Joaquin Rivers.
2. The occurrence and development of the extensive agricultural lands contiguous to these river systems.
3. The complexities of the delta channels at the confluence of these two river systems.
4. The climatic conditions which result in low flows during much of the agricultural season and, in dry years, critical water shortages.
5. The intrusion of saline waters into the delta area during periods of low stream flows.

The development of the Central Valley Project and the accelerated participation of the State in water development construction have increased and broadened the need for, and the value of, data on surface water flow. Most of the tributary streams throughout the entire Sacramento-San Joaquin Valley, including much of the foothill area, are now reported upon. This coverage encompasses both measurements of stream flow and measurements of diversions.

Tabular Information

On the following pages are tables of stream flow, stages, diversions and acreages irrigated, summaries of the foregoing, and supplementary data for the 1958 water year.

* Average unimpaired runoff in thousands of acre-feet computed from the 50-year period October 1905 through September 1955.

a Figures were computed from summations of unimpaired runoff at foothill stations on major tributaries only and do not include runoff from minor tributaries and from valley floor.

a Water supply from precipitation has been computed using weighted monthly mean rainfall and the acreage of the Delta Service Area.

b Consumptive use in the Delta Lowlands has been computed using monthly unit consumptive use factors for classified vegetation and evaporation, and acreage data obtained through the land use surveys of 1952 and 1955.

Note: The unmeasured accretions between gaging stations were computed by subtracting the measured inflow to a reach from the sum of the measured diversions and measured outflows from that reach.

- e Not included in computations of unmeasured accretions.
- a Diversions from Delta-Mendota Canal into Mendota Pool as computed by U. S. Bureau of Reclamation.
- b Includes diversions from Fresno Slough and James Bypass.
- c Includes diversions from Merced River below Stevinson.
- d Includes diversions from Tuolumne River below Tuolumne City.
- e Includes diversions from Stanislaus River below Mile 1.7.

Station located 0.7 mi. below So. Fork American River, 2.3 mi. NE of Folsom. Usable capacity, 1,000,000 ac.-ft. between elevations 205.5 and 486.0 ft. above mean sea level, practically all of which is available for release. Spillway design flood pool elevation, 475.4 ft. (capacity, 1,120,000 ac.-ft.). Figures given herein for daily content represent usable content. Inflow to Folsom Reservoir takes into account change in storage, release, spill, precipitation, and evaporation, and is representative of the natural flow which would pass the dam site if the dam had not been constructed. Figures shown under total discharge are computed inflow to the reservoir. Period of record for computed inflow is shown under period of record for discharge. Period of record for daily content is shown under period of record for stage. Records furn. by U.S.B.R. Drainage area is 1,875 sq. mi.												
FREMONT	WEIR SPILL TO YOLO BYPASS											
		182000	38.20	2/26/58	294000	39.16	12/23/55	JAN 35-DATE				
Formerly published as Fremont Weir from Sacramento River to Yolo Bypass. See Sacramento River at Fremont Weir, East End and Sacramento River at Fremont Weir, West End, for stage records and locations. Elev. of weir crest is 33.50 ft. U.S.E.D. datum; length of crest is 9,120 ft.

Station located near center of Friant Dam on San Joaquin River, immediately above Cottonwood Creek, 0.9 mi. NE of Friant. Usable capacity, 50,000 ac.-ft. between elevations 375.4 and 578.0 ft. above mean sea level. Not available for release, 17,300 ac.-ft. Inflow to Friant Reservoir takes into account change in storage, release, spill, precipitation, and evaporation, and is representative of the natural flow which would pass the dam site if the dam had not been constructed. Figures shown under total discharge are computed inflow to the reservoir. Period of record for computed inflow is shown under period of record for discharge. Period of record for daily content is shown under period of record for stage. Records furnished by U.S.B.R. Drainage area is 1,693 sq. mi.

Station located at Hoyce Orchard, 2.7 mi. E of Winters. Flow regulated by Lake Berryessa.																	
PUTAH CREEK NEAR WINTERS		38 30 54	122 04 52	NE28 8N 2W	9.14	1240	2/18/58	81000	30.5	2/27/40	33930	29460	JUN 30-DATE	JUN 30-DATE	1930 1940	161.6 160.75	USGS USGS
Station located 1.0 mi. below Monticello Dam, 6 mi. W of Winters. Flow regulated by Lake Berryessa. Low-water records are not equivalent to records near Davis. Records furn. by U.S.G.S. Drainage area is 977 sq. mi.																	
RECLAMATION DISTRICT 70 DRAINAGE TO SACRAMENTO RIVER																	
39 04 08		121 51 43	NE16 14N 1E								37210	14200	MAY 24-OCT 38M JAN 39-DATE				
Formerly published as Reclamation District 70 Drain. Plant located 1.7 mi. E of Grimes. This is drainage returned by pumping and gravity. Plant also discharges to irrigation canals.																	
RECLAMATION DISTRICT 108 DRAINAGE TO SACRAMENTO RIVER																	
38 51 45		121 47 29	NE30 12N 2E								22580	13340	APR 24-OCT 38M JAN 39-DATE				
Formerly published as Reclamation District 108 Drain at Rough and Ready Bend. Plant located 4.5 mi. E of Robbins. This is drainage returned by pumping. Pumping hours vary and figures shown are not necessarily daily flows. See Sacramento River near Rough and Ready Bend for stages in river. Additional water is sometimes returned to Colusa Basin Drain.																	
RECLAMATION DISTRICT 787 DRAINAGE TO COLUSA BASIN DRAIN																	
38 48 03		121 43 28	NW14 11N 2E								9315	2575	JAN 40-DATE				
Formerly published as Sycamore Slough near Knights Landing. Plant located 0.3 mi. W of Knights Landing. This is drainage returned by pumping between the Knights Landing Outfall Gates and the Sacramento River. Daily distribution of flows is not available since the plant operates on an automatic float switch. Additional water returned to Sacramento River.

Station located at head of Georgiana Slough, immediately SW of Walnut Grove. Station affected by tidal action. Maximum gage height listed does not indicate maximum discharge.													
SACRAMENTO RIVER BELOW WILKINS SLOUGH													
39 00 35	121 49 25	NE 2 13N 1E	28900	51.41	2/27/58	51.41	2/27/58	68610000	APR 31-OCT 388 JAN 39-DATE	1931	0.00	USED	
Station located 0.3 mi. below Wilkins Slough pumping plant of Reclamation District 108, 1.3 mi. below Tisdale Weir, 6 mi. SE of Grimes. Records furn. by U.S.G.S.													
SACRAMENTO SLOUGH AT SACRAMENTO RIVER													
38 46 52	121 38 27	SE21 11N 3E		38.9	2/26/58				JUN 24-OCT 398 JAN 40-DATE				
Formerly published as Sacramento Slough to Sacramento River. Station located 0.5 mi. above mouth, 4.6 mi. SE of Knights Landing. During low flows this represents combined flows of Sutter Bypass and Reclamation District 1500. During high flows the slough is entirely submerged as it lies within the bypass area. Sharp rises in the Sacramento River cause zero or negative flow.													
SACRAMENTO WEIR SPILL TO YOLO BYPASS													
			4070	31.67	4/7/58	118000E	32.8	3/26/28	26-DATE				
Formerly published as Sacramento Weir from Sacramento River to Yolo Bypass. See Sacramento River at Sacramento Weir and Sacramento River opposite Sacramento Weir for stage records and locations. Elevation of fixed crest of weir is 25.0 ft. U.S.E.D. datum; elevation of movable crest (top of needles) is 31.0 ft. U.S.E.D. datum. There are 48 gates, each 38 ft. in length. Flow listed includes leakage through and spill over top of gates. Gates not opened during year.													
SALT CREEK NEAR BELLA VISTA													
40 39 40	122 11 41	NW 3 32N 3W		5.67	3/24/58				NOV 57-DATE	1957	0.00	LOCAL	
Station located at U. S. Highway 299 bridge, 2.8 mi. NE of Bella Vista. Tributary to Sacramento River via Little Cow Creek and Cow Creek.

- a This acreage also received an undetermined amount of well water.
- b All feabody lands.
- c This acreage also received 3880 acre-feet of water from Cache Creek and an undetermined amount from Willow Slough.
- d Includes 120 acres outside of Woodland Farms Incorporated and 500 acres of duck club lands.
- e Includes 231 acres outside of Woodland Farms Incorporated and 720 acres reused for duck club lands.
- f The 4" unit was a temporary installation during 1958.
- g Combined acreage for Miles 13.1R and 13.25R. This acreage was double cropped.
- h 241 acres of general crops and 115 acres of rice listed for Mile 14.1L were irrigated by 3290 acre-feet of water from Mile 16.0L.
- i Formerly listed as Donald J. Damron.
- j This acreage also received an undetermined amount of controlled drainage water.
- k Formerly listed as J. L. Brannely.
- m This acreage is Drown lands.

a Includes acreage for Mile 4.5, a reservoir, and Mile 1.3, a main canal.
 b Includes 100 acres of water spilled into a lake.
 c Includes 1775 acre-feet delivered to River Farms Company as follows: April 4, May 18, June 189, July 20, August 27, and September 1.

d Includes 1898 acres of River Farms Company land.
 e Includes 100 acre-feet of water spilled into a lake.
 f Combined acreage for Miles 4.5 and 4.7L.
 g Of this acreage, 8 were raised for duck ponds.
 h The 16" unit was a temporary installation in 1958.
 i Includes 81 acres of Zumwalt lands.

- a Includes 5310 acre-feet of water served to lands in Reclamation District 1660 as follows: May 1270, June 1160, July 1390, August 1210 and September 280.
- b Includes 715 acres of general and 612 acres of rice in Reclamation District 1660.
- c Formerly listed as Lamb Brothers.
- d Includes 215 acres of F. Minship lands which are outside of the district and which received 299 acre-feet of water.
- e Includes 41 acres of Rohleder lands.
- f Includes 125 acres of Steidlmayer lands.
- g Includes 120 acres of Steidlmayer lands.
- h Includes 20 acres of Coffman lands and 18 acres of Chesney lands.
- i New installation in 1958.

- j Combined acreage for plants at Miles 78.15R, 78.75R, and 78.8R.
- k Includes 23 acres of Davis land, 29 acres of Stass land, and 23 acres of Leno's land.
- m Includes 20 acres of Oll Terminals Company land.
- n Includes 50 acres of S. Burtis lands.
- p An additional 1919 acres of general crops and 152 acres of rice were irrigated by controlled drainage.
- q Formerly listed as Sciortino Brothers.
- r Installed prior to 1958. Not previously listed.
- s This acreage was reused for duck ponds. Includes 550 acres of general crops and 100 acres of rice which also received an undetermined amount of water from Lower Butte Creek at Mile 4.3R.

- a Combined acreage for Miles 112.4R and 123.9R and plant on Colusa Basin Drain at Mile 94.2L.
- b 481 acres of rice listed for Glenn-Colusa Irrigation District plant at Mile 154.8R also received 3850 acre-feet of water from Mile 124.2R.
- c Combined acreage for Mile 124.2R and plants on Colusa Basin Drain at Miles 57.5R(2.4), Opp. 61.2R(1.5), Opp. 62.8L(2.5), 64.2R(0.1) and Opp. 64.2R(2.6).
- d 284 acres of rice listed for Mile 124.2R also received 2270 acre-feet of water from Glenn-Colusa Irrigation District plant at Mile 154.8R.
- e Formerly listed as F. S. Reager.
- f Additional acre-feet diverted from Butte Creek as follows: May 5080, June 4620, July 4700, August 2720, September 2240, and October 1370.
- g Includes acreage as follows: M&T Inc. - general 526, rice 796; Parrott Investment Co. - General 1278, rice 1077.
- h Replaces a 3" unit.
- i Formerly listed as Wallace E. Ferrin and George A. Zundel.
- j Installed prior to 1958. Not previously listed.
- k Formerly listed as G. G. Haas.
- m Quantities shown are diversions at Mile 154.75R to Glenn-Colusa Irrigation District canal.
- n This is a common point of diversion for Glenn-Colusa, Compton-Delevan and Maxwell Irrigation Districts.

- p One 42" unit was removed in 1958.
- q Additional acre-feet diverted by gravity from Stony Creek as follows: April 18300, May 28100, June 5160, July 1100, August 415, and September 260. An additional 2690 acre-feet diverted by plant on Colusa Basin Drain at Mile 29.8R(1.4). Includes 516 acre-feet served to 129 acres of general crops listed for Mile 112.4R.
- r This acreage also received an undetermined amount of controlled drainage water. Of this acreage, 1173 were reused for duck ponds. Includes the following acreage outside the District: general 436, and rice 980.
- s Consolidated into Glenn-Colusa Irrigation District in 1958.
- t District does not receive water from Sacramento River at this mile. Will not be listed in subsequent reports.
- u Includes 4 acres of Evit lands.
- v Plant moved from Mile 156.8R in 1958.
- w Replaces a 24" unit.
- x Nonagricultural use.
- y Combined acreage for Miles 168.85R and 168.9R.
- z Reinstallation in 1958 of a temporary installation in 1956.
- aa New installation in 1958.
- ab Formerly listed as J. A. Bulkely.
- ac Formerly listed as C. A. Dros.
- ad Combined acreage for Miles 198.0L and 198.3L.

* Carries return water from Colusa Basin along west border at Reclamation Districts 108 and 787 and then discharges to Sacramento River at Mile 34.15R or partial diversion via Knights Landing Ridge Cut.

** Mileage along Colusa Basin Drain from junction with Sacramento River.

a Combined acreage for Mile 0.3L and Sacramento River at Mile 34.5R.

b All duck club lands.

c Replaces an 18" unit.

d Two 16" units were removed in 1957.

e The acreage listed for Mile 15.75R also received 186 acre-feet of water from Mile 14.1R.

f The 8" unit was a temporary installation in 1958.

g Previously listed as "Opp. 20.2L(0.3)".

h New installation in 1958.

i This acreage also received an undetermined amount of well water.

j This water was served to acreage listed for Mile 154.41 on Sacramento River and includes an undetermined amount of water returned to Colusa Basin Drain by spill.

k All duck refuge lands.

l If this acreage, 20 were reused for duck ponds.

m Of this acreage, 80 were reused for duck ponds.

n This acreage also received an undetermined amount of controlled drainage water.

o Previously listed as 4-16" units.

p The acreage listed for Mile 103.3R on Sacramento River also received 743 acre-feet from Mile 23.7L(0.2).

q If this acreage, 330 were reused for duck ponds.

r If this acreage, 35 were reused for duck ponds.

s Installed prior to 1958. Not previously listed.

t Combined acreage for Mile 54.2L and plants on Sacramento River at Miles 12.4R and 23.3R.

u This acreage was reused for duck ponds.

v This water was served to acreage listed for Mile 12.4R on Sacramento River.

w Combined acreage for Miles 63.7L and 64.1L.

x Stock water.

a Acreage on west borrow pit are given northerly from drainage plant of Irrigation District 100. Mile 9.15 on west borrow pit of Sutter Bypass.

b Acreage on east borrow pit are given northerly or southerly from main drain.

c Acreage on Sacramento Slough are given easterly from drainage plant of Irrigation District 1500 which is at head of Slough.

d Acreage on the main drainage canal for Irrigation Plant 1 that joins east borrow pit of Sutter Bypass at Mile 1.44. Figure in parentheses indicates distance along drain from east borrow pit.

e Acreage on drain canal for Irrigation Plant 2 that joins east borrow pit of Sutter Bypass at Mile 1.44. Figure in parentheses indicates distance along drain from east borrow pit.

f Acreage on Wadsworth Canal which joins east borrow pit of Sutter Bypass at Mile 1.44. Figure in parentheses indicate distance along canal from east borrow pit.

g Acreage on Middle Creek which joins east borrow pit of Sutter Bypass at Mile 1.7. Figure in parentheses indicate distance along creek from east borrow pit.

h Water used for irrigation in Sutter Bypass in main Feather River return water main enters east and west borrow pits via Middle Creek, Little Slough, and Wadsworth Canal.

i Acreage area irrigated within Sutter Bypass.

j If this acreage, 35 were reused for duck ponds.

k Acreage area irrigated for Sutter Bypass and 28.14.

l Previously listed as a temporary installation.

m This 18" unit was also used in 1957.

n Plant moved from Mile 8(1.3) in 1958.

o New installation in 1958.

p The 18" unit was installed in 1958.

q Combined acreage for Miles 7.18 and 25(2.5).

r If this acreage, 35 were reused for duck ponds.

s All duck club lands.

t Temporary installation in 1958.

u Combined acreage for Miles 10.0N(2.0) and 10.0N(6.7) and plants on Feather River at Mile 38.18 and Sutter Extension Water District at Mile 58.18.

v If this acreage, 15 were reused for duck ponds.

w An 8" unit was a temporary installation during 1957.

x Previously listed as a 10" unit.

y All duck refuge lands.

z Previously listed as a 20" unit.

aa This acreage was reused for duck ponds.

ab The acreage listed for Mile 9(2.58) plant for Epperson, Kennedy and Joquin received 801 acre-feet of water from Mile 9(2.58) plant of Lara Harrington.

ac Formerly listed as E. J. and C. H. Epperson.

ad If this acreage, 25 were reused for duck ponds.

ae Includes acreage as follows: Epperson 43, Middleton 45, W. J. Madden 98, C. and L. DeWitt 55, M. DeWitt 48, and L. Myers 47.

* Diversions shown in this table below the McConnell Gaging Station are considered as Delta Uplands Diversions. Tidal effect ceases at about Mile 3.5.
 a Formerly listed as Desmond Ranch.
 b This acreage also received an undetermined amount of well water.
 c Replaces a 6" unit.
 d This acreage also received an undetermined amount of well water and controlled drainage water.
 e Replaced a 6" unit in 1957.

f Includes 50 acres which also received an undetermined amount of well water.
 g Combined acreage for Miles 26.5L and 27.3L. This acreage also received an undetermined amount of well water.
 h This figure is the diversion entering the District below State Highway 16 and includes an undetermined amount of spill to the Cosumnes River at Mile 29.9R but does not include the spill above Highway 16.

* Diversions shown in this table below the Woodbridge Gaging Station are considered as Delta Uplands Diversions. Left bank diversions into Reclamation District 318 (below Mile 9.8) and right bank diversions into McCormack-Williamson Tract (below Mile 3.5) are not included since these areas are considered to be within the Delta Lowlands. Tidal effect ceases at about Mile 10.5.

** Mile and bank above New Hope Bridge.

a This acreage also received an undetermined amount of water from Dry Creek.

b The 2" unit is a temporary portable unit used at Mile 22.1R.

c Formerly listed as Kirschermann and Mettler.

d Formerly listed as M. and V. Palmer.

e Acreage served by this water is undetermined.

f This diversion was from Cary Lake which receives water from Mokelumne River overflow.

g New installation in 1958.

h This acreage received its main supply of water from wells and controlled drainage.

i This acreage also received an undetermined amount of well water.

j Includes 25 acres of Graffigna lands.

k Formerly listed as William Weber.

m Includes 52 acres which also received an undetermined amount of well water. Of this acreage, 8 were double cropped.

n Formerly listed as C. L. Allen.

p Formerly listed as John S. Coates.

q Includes 79 acres which also received an undetermined amount of well water.

- a Diversions shown in this table below the Stockton Gaging Station are considered as Delta Islands diversions. Right bank diversions below Mile 200 and left bank diversions below Mile 107 are not included since they serve areas that are considered to be within the Delta Lowlands. Tidal effect ceases at about Mile 500.
- * North Slough - North Slough diverts from Calaveras River at Mile 11.3R. Distance from Calaveras River and bank is shown in parentheses.
- o Mormon Slough - Mormon Slough diverts from Calaveras River at Mile 25.3L and rejoins the river through Stockton Diverging Canal. Distance from Calaveras River and bank is shown in parentheses.
- Stockton Diverging Canal diverts from Mormon Slough at Mile 28.0 and rejoins the Calaveras River at Mile 54.1. Distance from Calaveras River and bank is shown in parentheses.
- a Formerly listed as E. A. and E. R. Anderson.
- b This acreage also received an undetermined amount of well water.
- c New installation in 1958.
- d Includes 8 acres which also received an undetermined amount of well water.
- e Combined acreage for Miles 11.22L and 11.75L.
- f Combined acreage for Miles 11.25R and 11.75R.
- g Combined acreage for Miles 11.95L, 12.00L, and 12.05L.
- h Combined acreage for Miles 12.1L and 12.15L.
- i Includes 9 acres which also received an undetermined amount of well water.
- j Combined acreage for Miles 12.35L, 11.35L, and 12.0L.
- k Combined acreage for Miles 12.39R and 12.13R.
- l Includes 19 acres of W. Fraggato lands.
- m Combined acreage for Miles 12.43R and 12.45R.
- n Includes 6 acres which also received an undetermined amount of well water.
- o Includes 9 acres of D. A. Osburn lands.
- r Includes 60 acres which also received an undetermined amount of well water.
- s Includes 3 acres which also received an undetermined amount of well water.
- t The acreage listed for Mile 15.6R also received an undetermined amount of water from Mile #21.6(L)(6.1L).
- u Includes 21 acres which also received an undetermined amount of well water.
- v Includes 3 acres which also received an undetermined amount of well water.
- w Includes 20 acres which also received an undetermined amount of well water.
- x Includes 29 acres which also received an undetermined amount of well water.
- y Includes 20 acres which also received an undetermined amount of well water.
- z Includes 7 acres which also received an undetermined amount of well water.
- aa Includes 11 acres which also received an undetermined amount of well water.
- ab Includes 12 acres which also received an undetermined amount of well water.
- ac Formerly listed as Edward G. Macchicini.
- ad Includes 35 acres which also received an undetermined amount of well water.
- ae The acreage listed for Mile 21.01L also received 105 acre-feet of water from Mile 21.0L.
- af Includes 17 acres which also received an undetermined amount of well water.
- ag Includes 27 acres which also received an undetermined amount of well water.
- ah Includes 171 acres which also received an undetermined amount of well water.
- ai Includes 10 acre-feet in September and 57 acre-feet in October which was controlled drainage water.
- aj Includes 42 acres which also received an undetermined amount of well water.
- ak Includes 11 acre-feet in October which was controlled drainage water.
- am Replaces an 8" unit.
- an A 2" unit was removed in 1958.
- ap Includes 43 acres which also received an undetermined amount of well water.
- aq Includes 10 acres of Miller lands and 10 acres of Heath lands.
- ar Temporary installation in 1958.
- as Combined acreage for Miles 22.5L and 22.7L.
- at Formerly listed as Louis Fassano.
- au Includes 47 acres which also received an undetermined amount of well water.
- av Combined acreage for Miles 24.3L and 24.4L.
- aw This acreage also received an undetermined amount of well water and controlled drainage water.
- ax Includes 72 acres which also received an undetermined amount of well water.
- ay Previously listed as a 5" unit.
- az Includes 153 acres which also received an undetermined amount of well water.
- ba Includes 85 acres of P. L. Leonardini lands.
- bb A 2" unit was installed in 1958.
- bc Includes 15 acres of S. M. Canepa lands.
- bd Includes 1 acre which also received an undetermined amount of well water.
- be 6 acres listed for Mile 6.9L also received an undetermined amount of water from Mile 7.2L.
- bf Formerly listed as the Prado Brothers.
- bg Includes 9 acres which also received an undetermined amount of well water.
- bh Formerly listed as A. and R. Lagorio.
- bi Includes 119 acres which also received an undetermined amount of well water.
- bj Includes 8 acres of Antonini lands.
- bk Includes 57 acres which also received an undetermined amount of well water.
- bl Includes 30 acres which also received an undetermined amount of well water.
- bn Formerly listed as Ray Duarte.
- bp Includes 35 acres which also received an undetermined amount of well water.
- bq Formerly listed as L. Gogna.
- br Includes 4 acres of D. Logan lands and 4 acres of F. Jorna lands.
- bs Includes 15 acres which also received an undetermined amount of well water.
- bt Formerly listed as Joseph Jaffese and Sons.
- bu Includes 60 acres of Anderson lands and 45 acres of Whiston lands.
- bv Includes 65 acres which also received an undetermined amount of well water.
- bw Replaces a 5" unit.
- bx Formerly listed as S. M. Gregory.
- by The acreage listed for Mile 31.6R also received an undetermined amount of water from Mile 31-3R.
- bz Includes 60 acres of Ray Gregory lands.
- ca Includes 11 acres of Leslie M. Gregory lands.

- Mileage along Tom Paine Slough from its mouth at Mile 50.3L on the Old River.
- Mileage along Old River from mouth of San Joaquin River 1.5 miles below Antioch.
- Mile and bank above mouth.
- Holly Sugar Corporation dredger cut joins Tom Paine Slough at Mile 2.13. Distance along dredger cut and bank is shown in parentheses.
- a 93 acres listed for Mile 1.58 also received an undetermined amount of water from Mile 0.75.
- b Of this acreage, 70 were double cropped.
- c This acreage also received an undetermined amount of Holly Sugar Corporation Factory waste water.
- d Includes an undetermined amount of water used for industrial purposes. Acreage served by this water is undetermined.
- e f This acreage, 165 were double cropped.
- f Land formerly served with water from Pescadero Reclamation District 2058(54) at Mile 9.08 is now served by Pescadero Reclamation District 2058(6) at Mile 9.04.
- g Rock Slough joins Old River at Mile 30.5L. Pumping plant is located on channel which joins Rock Slough.
- h Includes 27 acres of G. F. Mercer Lands.
- i Indian Slough joins Old River at Mile 30.5L. Pumping plant is located on intake canal which joins Indian Slough.
- j Includes double cropped acreage. This acreage also received 3220 acre-feet of well water.

- k Italian Slough joins Old River at Mile 40.9L. Pumping plant is located on intake canal which joins Italian Slough.
- m One 30" unit was installed in 1958.
- n Includes 160 acres which also received an undetermined amount of controlled drainage water. Of this acreage, 292 were double cropped.
- p Plant is located on intake canal which joins the Old River at this mile.
- q Of this acreage, 45 were double cropped.
- r Plant is located on Mountain House Creek which joins the Old River at this mile.
- s This acreage also received an undetermined amount of water from Mountain House Creek.
- t This acreage also received 240 acre-feet of well water. Includes 225 acres of outside contract lands. Of this acreage, 225 were double cropped. This acreage also received 615 acre-feet of Delta-Mendota Canal water as follows: July 32, and August 38.
- u Includes 20 acres irrigated outside of district. Of this acreage, 20 were double cropped.
- v Includes an undetermined amount of water returned to river by spill.
- w Formerly listed as Excelsior Ranch #2.

- * Mileage along San Joaquin River from its mouth 4.5 miles below Antioch.
- a Includes an undetermined amount of water returned to river by spill.
- b Of this acreage, 6 were double cropped.
- c This acreage also received an undetermined amount of controlled drainage water.
- d Replaced the 6" unit in 1958.
- e Includes 30 acres which also received an undetermined amount of well water.
- f Combined acreages for Miles 49.3R and 49.5R.
- g Includes 52 acres of Vierra lands.
- h Formerly listed as G. Santini.
- i Includes 29 acres of Wislaura lands.
- j Of this acreage, 10 were double cropped.
- k Of this acreage, 24.5 were double cropped.
- m Includes 13 acres of Dewar lands.
- n Formerly listed as R. Mauro.
- p Plant is located on Walthall Slough which joins the San Joaquin River at this mile.

- q Of this acreage, 25 were double cropped.
- r Plant is located on Paradise Cut which joins the San Joaquin River at this mile.
- s Formerly listed as Alexander Hilderbrand.
- t Plant is located on old channel which joins the San Joaquin River at this mile.
- u Plant is located on intake canal which joins the San Joaquin River at this mile.
- v Includes 811 acres of Bante Irrigated Farms, 599 acres of Nasson District, and 1127 acres of outfall contracts. Of this acreage, 863 were double cropped. Portions of this acreage also received an undetermined amount of well water. This acreage also received additional acre-feet diverted from Delta-Mendota Canal as follows: May 816, July 420, and August 459.
- w Includes 195 acres which also received an undetermined amount of Walthall Slough water.
- x Recreational lakes. This acreage also received an undetermined amount of controlled drainage water.

- e Figures represent North Townships, East Ranges, and Sections. Letters represent the E, S portion of the section.
- a Formerly listed as Guodi Segarini.
- b Includes 549 acre-feet of water received by sub-irrigation.
- c New installation in 1958.
- d This acreage also received an undetermined amount of water from the Woodbridge Irrigation District and was reused for duck club lands.
- e Includes 60 acres which also received an undetermined amount of controlled drainage water.
- f Gravity diversion used but was not computed prior to 1958.
- g Formerly listed as Edwards Brothers.
- h Formerly listed as Raahauge and Joseph.
- i All duck club lands.
- j The 24" unit was installed in 1958.
- k Includes 1459 acres outside of District and 404 acres of duck clubs.
- m Of this acreage, 10 were reused for duck clubs.
- n This acreage also received an undetermined amount of controlled drainage water.
- p Formerly listed as Ervin E. Vassar.
- q Of this acreage, 38 were reused for duck clubs.
- r Includes an undetermined amount of Marsh Creek water.
- s Formerly listed as George Ende.
- t Includes 20 acres of duck ponds.

- u This acreage also received an undetermined amount of water from the Woodbridge Irrigation District.
- v This point of diversion is now shown in the Putah Creek Table at Mile 3.0L.
- w This point of diversion is now shown in the Putah Creek Table at Mile 2.1R.
- x This point of diversion is now shown in the Putah Creek Table at Mile 2.7R.
- y Diversion for 1958 was all controlled drainage water.
- z Replaces a 14" unit.
- aa 350 acres listed for 6/3-19E also received an undetermined amount of water from 6/3-20J.
- ab Includes 350 acres of duck club lands. 350 acres listed for 6/3-19E also received an undetermined amount of water from 6/3-20J. Combined acreage for 6/3-19E and 6/3-20J.
- ac Combined acreage for 6/3-19E and 6/3-30D.
- ad Includes 40 acres of duck club lands.
- ae Estimated consumptive use on lands in the Delta Uplands is considered as sub-irrigated from tidal channels during 1958 without a specific point of diversion.
- af Point of diversion is considered as the control gates at Lambert Road.
- ag Unmeasured in 1958. This point of diversion will not be reported in subsequent years.

- o Mileage along San Joaquin River from its mouth 4.5 miles below Antloch.
- aa West Stanislaus Irrigation District intake canal. The intake canal joins the San Joaquin River at Mile 91.8L. Distance from the San Joaquin River and the bank is shown in parentheses.
- o Plant is located on old channel which joins the San Joaquin at this mile.
- a Of this acreage, 15 were double cropped.
- b Includes an undetermined amount of water returned to river by spill.
- c This acreage also received an undetermined amount of controlled drainage water. Includes 258 acres which also received an undetermined amount of well water. Of this acreage, 20 were double cropped.
- d This acreage also received additional acre-feet diverted from Delta-Mendota Canal as follows: June 1660, July 6870, August 7060, and September 412. Of this acreage, 158 were double cropped. Includes 1966 acres irrigated outside of district plus 22 acres of Santa-Carbona Irrigation District lands. Portions of this acreage also received an undetermined amount of well water.
- e Combined acreage for Miles **[0.7N] and **[1.1N]. Of this acreage, 21a were double cropped.
- f A 6" unit was removed in 1957.
- g One 6" unit was a temporary installation in 1958.
- h Includes 20 acres which also received an undetermined amount of controlled drainage water.

- i Includes 105 acres which also received an undetermined amount of controlled drainage water.
- j This acreage also received an undetermined amount of Turlock Irrigation District water.
- k Formerly listed as W. R. Cook.
- m This acreage also received an undetermined amount of well water. n 385 acres of rice listed for Mile 109.8L also received an undetermined amount of water from Mile 104.4L.
- p Of this acreage, 900 were double cropped. This acreage also received additional acre-feet diverted from Delta-Mendota Canal as follows: April 257, May 594, June 573, July 639, August 473, September 328, and October 134. Includes 52 acres which also received an undetermined amount of well water.
- q Of this acreage, 65 were double cropped.
- r The 4" unit was a temporary installation in 1958.
- s Replaces a 3" unit. The 4" unit was a temporary installation in 1958.
- t This acreage also received an undetermined amount of controlled drainage water.
- u Of this acreage, 526 were double cropped.
- v Formerly listed as L. A. Thomson and J. N. Barbour.
- w Replaced a 16" unit in August 1958.
- x Of this acreage, 18 were double cropped.
- y New installation in 1958.
- z Includes 185 acres which also received an undetermined amount of water from East Side Canal Company.

- * Mileage along San Joaquin River from its mouth 4.5 miles below Antioch.
- ** Plant is located on Sand Slough which diverts from San Joaquin River at Mile 168.4R. Distance from San Joaquin River and bank is shown in parentheses.
- 0 Located on Fresno Slough which diverts from San Joaquin River at Mile 209.0L. Distance from San Joaquin River and bank is shown in parentheses.
- 00 Plant is located on James Bypass which diverts from Fresno Slough at Mile 0(11.80R). Distance from Fresno Slough and bank shown in parentheses.
- a Water diverted by this plant is controlled drainage water and will not be reported in subsequent reports.
- b New installation in 1958.
- c Includes an undetermined amount of spill and controlled drainage water.
- d 234 acres listed for Mile 161.9R also received an undetermined amount of water from Mile 161.4R.
- e Installed prior to 1958. Not previously listed.

- f Central California Irrigation District plants at Mile 169.95L and 185.6L supplement the district gravity supply at Mile 208.8L.
- g Point of diversion is at head of Temple Slough.
- h Main canal, also includes outside canal and Helm Ditch.
- i Includes double cropped acreage.
- j Data furnished by U. S. Bureau of Reclamation.
- k Portable pump located on Little San Joaquin Slough, near South t corner, Section 28, T.13S., R.15E.
- m Of this acreage, 70 were double cropped.
- n Includes an undetermined amount of return flow to Fresno Slough.
- p Of this acreage, 690 were double cropped.
- q This acreage was double cropped.
- r This acreage also received an undetermined amount of well water.
- s Includes delivery from Delta-Mendota Canal via San Luis Wasteway.
- t Mobile pump.
- u Includes diversion by Mendota Pool pumps, Mowry pumps and gravity diversion into Lone Willow Slough.
- v The 12" unit was removed in 1957.

- * Mileage along San Joaquin River from its mouth 4.5 miles below Antioch.
- a Point of diversion and place of use is an island in midstream.
- b Domestic use.
- c 4.4" unit was removed in 1958.
- d This acreage also received an undetermined amount of well water. Of this acreage, 69 were double cropped.
- e Formerly listed as Santos Carrasco.
- f This acreage also received an undetermined amount of well water.
- g Formerly listed as Smith, McInturf and Hansen.
- h Includes 5 acres of Morello Minery Lands. This acreage also received an undetermined amount of Fresno Irrigation District water.
- i This acreage also received an undetermined amount of Madera Irrigation District water.
- j Formerly listed as Y. H. Donny.
- k This acreage also received an undetermined amount of Fresno Irrigation District water.
- l Formerly listed as C. L. Hammar.
- m This acreage also received an undetermined amount of well water. Includes 17 acres which also received an undetermined amount of Madera Irrigation District water.

- n Formerly listed as A. L. Boucher.
- p 15 acres listed for Mile 255.93R also received 14 acre-feet of water and 23 acres listed for Mile 255.34R also received 30 acre-feet of water from Mile 256.52R.
- q Of this acreage, 2 were double cropped.
- r Replaces a "o" unit.
- s 10 acres listed for Mile 257.11 also received an undetermined amount of water from Mile 257.71.
- t Includes 35 acres of J. B. Cobb lands.
- u Combined acreage for Miles 258.80L and 258.90L.
- v Of this acreage, 7 were double cropped.
- w The acreage listed for Mile 262.27L also received an undetermined amount of water from Mile 262.32L.
- x Formerly listed as Dale McCoom.
- y The acreage listed for Mile 262.6R also received an undetermined amount of water from Mile 263.40R.
- z Of this acreage, 29 were double cropped.
- aa Plant is located on pond whose major source of supply is from the Pacific Coast aggregate Company plant at this mile.
- ab Formerly listed as V. D. Roullard.

* Mileage downstream from junction with South Fork Tule River.
a Flow measured at gaging station on Pioneer Ditch located approximately 1.0 mile below head.
b This acreage also received an undetermined amount of well water. Not reported since 1953.
c 14 acres listed for Mile 2.60L also received an undetermined amount of water from Mile 1.5L.
d Installed prior to 1958. Not previously listed.
e Flow measured at gaging station on Campbell-Moreland Ditch located approximately 2600 feet below head.
f Includes an undetermined amount of water served to Vandalia Irrigation District well fields.
g There were 2370 acre-feet of spill into Porter Slough as follows: November 26, December 23, January 19, February 54, March 48, April 32, May 18, June 92, July 13, August 6, and October 136.
h Flow measured at gaging station on Porter Slough Ditch located approximately 150 feet below head.
i Flow measured at gaging station on Vandalia Ditch located approximately 1000 feet below head.

k This acreage also received an undetermined amount of water from wells and Campbell-Moreland Ditch via well fields.
m Flow measured at gaging station on Poplar Ditch located approximately 4750 feet below head. Irrigated acreage unavailable.
n Flow measured at gaging station on Hubbs-Miner Ditch located approximately 3400 feet below head.
o Includes 1127 acres in the Hubbs-Miner Ditch Company and 265 acres in the Gilliam-McGee Ditch Company.
p Flow measured at gaging station on Rhodes-Pine Ditch located approximately 3100 feet below head.
q Flow measured at gaging station on Woods-Central Ditch located approximately 100 feet below head.
r There were 1330 acre-feet of spill into Tule River as follows: December 6, January 28, February 30, March 219, April 173, May 235, June 239, July 93, and August 7.

* Data furnished by water users and rounded according to criteria applied by the department.

a An additional 134400 acre-feet of water was pumped from wells.
 b Of this acreage, 3424 were double cropped. Does not include an undetermined amount of riparian water users acreage.
 c An additional 127300 acre-feet of water was pumped from wells.
 d Of this acreage, 23300 were double cropped.
 e An additional 61280 acre-feet of water was pumped from wells.
 f Of this acreage, 10510 were double cropped.
 g Of this acreage, 393 were double cropped.

h Of this acreage, 498 were double cropped.
 i Of this acreage, 306 were double cropped.
 j Includes 806 acres listed for Miles 35.9L and 37.0L on the Stanislaus River. This acreage also received 32220 acre-feet of water from wells and controlled drainage.
 k This acreage also received an undetermined amount of well water and an undetermined amount of controlled drainage water from Oakdale Irrigation District. Of this acreage, 5181 were double cropped. Includes 1913 acres served by sub-irrigation.

		Hours	Min.	
SAN FRANCISCO, SAN PABLO, AND SUISUN BAYS				
Point Orient	12.3	2	20	At Point Orient on northeast shore of San Francisco Bay, one-half mile south of San Pablo Point, at wharf of Standard Oil Company.
Point Pinole	19.0	2	50	At Pinole Point on southeast shore of San Pablo Bay, at wharf of Atlas Powder Company.
Grand View	25.2	3	15	At mouth of Petaluma Creek on northwest shore of San Pablo Bay, at highway drawbridge.
Crockett	27.7	3	30	At west end of Carquinez Strait, south shore, 0.2 mile east of Carquinez Bridge, at wharf of C. and H. Sugar Refining Corporation.
Benicia	32.5	3	50	At east end of Carquinez Strait, north shore, at wharf of U. S. Army Arsenal at Benicia.
Martinez	32.7	3	50	At east end of Carquinez Strait, south shore, at Municipal Ferry slip at Martinez.
West Suisun	37.0	4	10	On northwest shore of Suisun Bay, 2.6 miles northeast of Southern Pacific Company railroad bridge, at Reserve Fleet mooring pier of U. S. Maritime Commission.
Innisfail Ferry	47.3	4	50	On Montezuma Slough, 0.7 mile east of junction with Cutoff Slough, at Crizaly Island Ferry crossing at Beldons Landing.
Port Chicago	41.0	4	20	On south shore of Suisun Bay, at U. S. Navy Ammunition Depot wharf at Port Chicago.
Spoonbill Creek	46.5	4	40	On Spoonbill Creek, between Honker Bay and Sacramento River, at Sacramento Northern Railroad bridge.
Pittsburg	48.0	5	00	On left bank of New York Slough at mouth, at east end of Suisun Bay, at Pittsburg Yacht Harbor.
SACRAMENTO RIVER DELTA				
Collinsville	50.8	5	25	On right bank of Sacramento River, at Collinsville.
Emmaton	57.6	5	45	On left bank of Sacramento River, 5.9 miles below Rio Vista, at mouth of Horseshoe Bend.
Threemile Slough Bridge	60.0	5	55	At junction of Threemile Slough and Sacramento River, at highway bridge.
Rio Vista Bridge	63.5	6	05	On right bank of Sacramento River, at Rio Vista, at highway bridge.
Isleton Bridge	68.7	6	30	On Sacramento River, one mile above Isleton, at highway bridge.
SAN JOAQUIN RIVER DELTA				
Antioch	54.9	5	55	On left bank of San Joaquin River, at Antioch Water Works pumping plant.
Antioch Bridge	58.2	6	10	On left bank of San Joaquin River, three miles east of Antioch, at Antioch Bridge.
Jersey Island	61.4	6	20	On left bank of San Joaquin River, one mile below mouth of False River.
Threemile Slough	64.2	6	30	At junction of Threemile Slough and San Joaquin River.
Oulton Point	67.2	6	40	On right bank of San Joaquin River, three miles above junction with Threemile Slough.
San Andreas Landing	70.3	6	55	On right bank of San Joaquin River, one mile below mouth of Mokelumne River.
Opposite Central Landing	72.0	7	00	On right bank of Mokelumne River, on Andrus Island, directly opposite Central Landing on Bouldin Island.
Dutch Slough	73.0	7	05	On Dutch Slough at Bethel Island Bridge.
East Contra Costa I. D.	86.7	8	20	At west end of intake canal from Indian Slough, at East Contra Costa Irrigation District pumping plant.
Clifton Court Ferry	94.2	9	10	On Old River, 0.2 mile above junction with West Canal, at Clifton Court Ferry crossing.
Mossdale Bridge	108.5	10	50	On San Joaquin River, three miles southwest of Lathrop, at Mossdale highway bridge.
Vernalis	127.0	11	00	On San Joaquin River, three miles northeast of Vernalis, at Durham Ferry Road bridge. Station located above tidal action.

a Mileage measured along main channel to station. For stations off the main channel, the mileage shown is the same distance along the main channel to a point whereon the time of occurrence of tidal phases is the same as that of the observation station.

b Time interval between high-high tide at Golden Gate and time for taking samples at station.

TABLE 400
 MAXIMUM OBSERVED SALINITY AT BAY AND DELTA STATIONS
 In parts of chloride per million parts of water

Station (a)	Water Year

a For location see salinity observation stations description table.

b Releases of stored water from Shasta Lake commenced in 1944.

c Releases of stored water from Folsom Reservoir commenced in 1956.

d Average unimpaired runoff computed from summations of unimpaired runoff at foothill stations on major tributaries for the 50-year period October 1905 through September 1955.

e Record incomplete.

f Station located above tidal action.

LAHONTAN AREA

LAHONTAN AREAIntroduction

The water resources of the Lahontan Area as a whole are greatly deficient with respect to the potential development of this region; however, sufficient water resources to supply their ultimate needs do exist in a few stream basins.

Geographically, the Lahontan Area is the most extensive of the hydrographic areas. Lying along almost the entire California-Nevada border, the Lahontan Area extends from the Oregon border to the New York Mountains, within 40 miles west of the Colorado River. It includes all the drainage basins of California lying east of the Warner Mountains, the Sierra Nevada, the Tehachapi Mountains, the Portal Ridge, the San Gabriel Mountains, and the San Bernardino Mountains. It does not include areas draining into the Salton Sea and the Colorado River. All of the principal streams of the area head on the eastern slopes of the Sierra Nevada or on the San Bernardino Mountains and flow into inland lakes or sinks in California or Nevada.

Tabular Information

On the following pages are the data for 11 gaging stations for the 1958 water year.

TABLE 402
GAGING STATION DESCRIPTION AND DATA SUMMARY
LAHONTAN AREA
